PS-I Project Title: Mapping and Research

Short Summary of work done: Our unwavering dedication to the research project involved meticulously mapping potential candidates across various roles and levels within the FMCG industry. Our primary objective was to identify exceptional talents whose backgrounds, qualifications, and career aspirations seamlessly aligned with the specific needs of FMCG companies. Our ultimate goal was to compile a comprehensive list of potential clients for ABC Consultants, with a particular emphasis on the FMCG sector. This endeavor entailed a thorough analysis of businesses with diverse recruitment needs and promising growth potential. As a result of our diligent efforts, we produced a valuable resource that holds immense value for ABC Consultants in their future engagements within the FMCG industry. Furthermore, our work played a pivotal role in shaping highly effective talent acquisition strategies. Employing skillful precision, we expertly shortlisted and gained a deep understanding of the career trajectories of qualified candidates, providing ABC Consultants with invaluable insights that significantly bolstered their talent acquisition processes. Through our comprehensive research and profound understanding of the FMCG industry's talent landscape, we not only added significant value to ABC Consultants but also made substantial contributions to the growth and success of FMCG companies. By connecting these companies with high-potential candidates perfectly aligned with their organizational goals, we facilitated the creation of dynamic, skilled teams capable of driving innovation and achieving remarkable success in the competitive FMCG market. Our efforts have undoubtedly paved the way for fostering fruitful partnerships between top-tier talent and visionary FMCG companies, fostering a landscape of success and excellence in the industry.

Objectives of the project: Research on Talent Mapping and Candidates of various sectors

Tool used: Google Advanced Search, LinkedIn Recruiter Talent Solutions

Details of Papers/patents: None

Brief description of the working environment: Throughout our enriching internship at ABC Consultants, we were embraced by a highly positive and inclusive work environment, which made our experience truly exceptional. From day one, we were

treated as integral members of the team, entrusted with responsibilities comparable to those of seasoned employees. This inclusive approach not only made us feel valued but also motivated us to contribute actively and make a meaningful impact.
The guidance and support we received from our mentors were exemplary. They were readily accessible, providing insightful advice and addressing any questions that arose during our internship journey. Their mentorship played a pivotal role in shaping our professional growth, instilling in us the confidence to tackle new challenges head-on.
As we progressed through our internship, we witnessed how the level of expectations evolved in sync with our expanding knowledge and skills. Our assigned tasks gradually became more intricate and demanding, allowing us to apply the knowledge we had acquired and stretch our capabilities further. The introduction of cutting-edge tools and technologies added an extra dimension to our learning experience, equipping us to approach tasks with heightened efficiency and creativity.
While our time at ABC Consultants was incredibly fulfilling, we did notice a slight shift in workload dynamics towards the end of our tenure. The number of mandates assigned to us reduced, resulting in a lighter workload. However, we used this opportunity to concentrate more deeply on individual tasks, seeking to deliver exceptional results despite the reduced volume.
Overall, the invaluable insights and experiences we gained during our internship will undoubtedly shape our future careers. The nurturing work environment and continuous learning opportunities have left a lasting impression, motivating us to strive for excellence in all our endeavors. As we embark on the next phase of our professional journey, we carry with us the knowledge, skills, and gratitude for the remarkable support and encouragement we received at ABC Consultants. We are eager to apply these lessons and contribute positively to the organizations we join, making a significant impact in the dynamic world of business and beyond.

PS-I Project Title: Research & Mapping

Short Summary of work done: Did 3000 candidates data finding from different platforms like LinkedIn and bullorn and sorting all this together in an organised way. After this we tend to find the suitable jobs according to their wants & eligibility

Objectives of the project: Integrating and arranging different data of candidates finding top level executive jobs

Tool used: excel

Details of Papers/patents:NIL

Brief description of the working environment: Very good and supportive environment full flexibility in working hours and independence of time choosing for work .Everything was absolutely very meaningful and full of learning experience . At the end I am well versed with google sheets, bullhorn and LinkedIn . I am particularly grateful for the numerous opportunities for learning and development provided by the company. The training sessions, workshops, and mentorship programs have equipped me with the skills and knowledge necessary to excel in my role. The emphasis on personal growth has made me feel supported and valued as an individual, beyond just being an employee.
Moreover, the work-life balance promoted at [Company Name] is commendable. I feel encouraged to maintain a healthy equilibrium between my professional and personal life, which has had a profoundly positive impact on my overall well-being.
I would be remiss not to mention the recognition and rewards program implemented by the company. The acknowledgment of hard work and dedication has been a tremendous source of motivation for me and has further strengthened my commitment to contributing to the organization's success.

PS-I Project Title: Mapping in Major Indian FMCG Giants

Short Summary of work done: We worked diligently on our research project, which revolved around mapping potential candidates across various roles and levels within the FMCG industry. Our primary focus was on meticulously analyzing their backgrounds, qualifications, and career aspirations to identify high-potential individuals who perfectly aligned with the specific requirements of FMCG companies. One of the key objectives of our research was to compile an extensive list of potential company clientele exclusively for ABC Consultants in the FMCG sector. This task demanded an in-depth examination of companies with diverse recruitment needs and considerable growth potential. As a result of our exhaustive efforts, we created a valuable resource that would prove essential for ABC Consultants in their future client engagements within this industry. Furthermore, our work played a pivotal role in shaping effective talent acquisition strategies. By skillfully shortlisting suitable candidates and gaining a profound understanding of their career trajectories, we offered invaluable insights that optimized ABC Consultants' talent acquisition processes.

Objectives of the project: Research on Talent Mapping and Company Clientele in the Indian FMCG Industry

Tool used: Google Advanced Search, LinkedIn Recruiter Talent Solutions

Details of Papers/patents: None

Brief description of the working environment: During our internship at ABC Consultants, we were fortunate to experience a highly welcoming and positive work environment. Right from the beginning, we were treated on par with the fresher roles, which made us feel valued and integrated into the team. The mentors were incredibly supportive and accessible, always ready to provide guidance and answer any questions we had.

As we progressed through our internship, we noticed that the level of expectations increased in line with our growing knowledge and skills. It was a fulfilling experience to witness how the mandates assigned to us became more challenging and complex, allowing us to put our newfound knowledge into practice. The introduction of new tools and technologies further enriched our learning process and enhanced our ability to tackle tasks effectively.

While we thoroughly enjoyed our time at ABC Consultants, we did notice a slight shift in the workload dynamics towards the end of our tenure. The number of mandates assigned to us became limited, resulting in a reduction in the volume of work. While this change allowed us to focus more on the tasks at hand, we couldn't help but feel a tad bit underutilized during the final phase of our internship.

Nonetheless, despite this minor change, we appreciated the overall experience and the valuable insights gained throughout our time at the company. The nurturing work environment, combined with the continuous learning opportunities, has left a lasting impression on us as interns. We are grateful for the support and encouragement provided by both our colleagues and mentors, making our internship journey truly rewarding and memorable. We are eager to carry forward the lessons learned and the skills acquired as we embark on the next chapter of our professional journey.

Student Write-up:

PS-I Project Title: Talent and research mapping in the retail industry

Short Summary of work done: I was tasked to prepare the master mapping sheets initially for 2 functions i.e. Category/ B&M and Sales/EBO head. I was given a list of 100+ companies and was tasked to find the relevant profiles for the appropriate designations and upon their verification, I had to fill in other details like work exp, previous org, contact details, education etc. I was also given a master mapping sheet prepared in 2017 and was tasked to verify the 1200+ names on it and use the relevant ones. Upon initial verification I had to use methods like string search, google advanced searches or use direct linkedin search to fill in any gaps that might have remained. After this I was supposed to fill in the contact details from ResDex and also add any other profile that I may find. I also used Bullhorn to add any other names which weren't available on other websites. After finishing these functions I was given the Supply Chain Management function where I was supposed to do this same process but it was slightly more reliant on ResDex rather than LinkedIn. I also worked on contact sourcing for other functions like MBO, LFS, E-commerce, Marketing etc from ResDex

Objectives of the project: Prepare the master mapping sheet for various functions of retail industry including sales, EBO, MBO, LFS, E-commerce, Category, B&M etc which includes finding relevant names for a given list of companies under these functions and filling in details like work exp, previous org, education, contact info among others.

Tool used: LinkedIn, Google Advance Search, String Search, Photo search methods, ResDex, Bullhorn, SignalHire

Details of Papers/patents: None

Brief description of the working environment: ABC Consultants fosters a vibrant and dynamic working environment that promotes a culture of collaboration, innovation and growth. The company values diversity and inclusivity, creating a welcoming space where individuals from any background can thrive. We are encouraging to collaborate, exchange ideas, and pool their expertise to deliver exceptional service to the clients. Regular team meetings and knowledge sharing events create a cohesive and motivated workforce. Furthermore, the company places great emphasis on continuous learning and professional development. Regular access to industry specific resources empower

employees to stay updated with the latest trends and advancements in the HR landscape. As an intern the company has high expectations for its employees promoting a performance driven and results oriented approach. They look for individuals who can understand and cater to the needs of the client. My experience also taught me a lot in communication skills both within the team and with my superiors. It allowed me to develop a team player mindset which has been invaluable for me. If you show interest in learning and growth they support you in every possible way and provide you all the tools for success. My mentors were well versed and helped me in any way possible. This company has exceeded all my expectations from HR as an industry and genuinely allowed me to consider it as a career option.

Academic courses relevant to the project: Technical Report Writing, Soft Skills

Learning Outcome: I learned about the entire process that goes on behind a recruitment process, from the first contact by the ABC consultant to the final interview with the client board of directors, I was able to witness it all and it was a very enriching experience. I also learned about various profile searching methods like linkedin, google advanced searches, ResDex, Bullhorn among other platforms which help in searching the appropriate profile. I was able to understand how to review a profile, look for keywords and understand whether they are relevant or not.

Student Write-up:

PS-I Project Title: Talent Mapping & Research

Short Summary of work done: ABC is a HR consultancy firm, one of the best in the domain. There are 2 types of project available here, one is Talent Mapping & Research and the other is Consultancy work. The Talent Mapping & Research is kind of similar to the work people do in DoSM. You would be required to collect data about the candidates, with a specific profile, through the LinkedIn. The work is not very hectic per say, but it could get a bit much at times. You may have to work on collecting certain number of profiles per day depending who you are working with. Consultancy is different, the ultimate task here is to call the cadidates for the open job position in some company and

clarify any and all doubts they might have. Consultancy require more active participation as compared to Talent Mapping. Also, I would like to mention that you probably would not get a choice of selecting the kind of project you would be working on. The project is allocated randomly. Other pro point is that they have nice working office, both in Delhi and Mumbai, so you'd experience proper corporate vibe. The only downfall of joining ABC consultants was, you don't get to learn much. This is the case for majority of the PS stations but if you are inclined towards IT or some other specific sector, I would say join them.

Objectives of the project: To gather information about the potential candidates for mid to executive position hiring.

Tool used: Browser

Details of Papers/patents:NA

Brief description of the working environment: The working environment is great. ABC has a proper corporate office, both in Delhi and Mumbai. People are great and they'd teach you whatever they can during your stay there. We had to go the office 2 times a week, and the work was chill. I developed somewhat of a work-life discipline while I was going to the office and I believe that it will help me in the future.

Academic courses relevant to the project: None

Learning Outcome: Boolean Search Working.

PS-I Project Title: Livelihoods Enhancement Action Plan

Short Summary of work done: The Work was delegated throughout the Practice school - 1 in accordance with priority. Firstly as a team, worked for the Livelihoods Enhancement Action Plan in rural area and for the second phase had to conduct a study on the

comparative analysis among educational institutions and finally worked with the brochure designing of Akshara Livelihoods. Most of the data was analyzed and was documented as a report.

Objectives of the project: Data collection, analysis and interpretation from villages for livelihoods study

Tool used: Gadgets for audio recordings, mass communication, Canva, Microsoft PowerPoint , Microsoft Excel

Details of Papers/patents: None

Brief description of the working environment: Working environment include mostly the field work where in data collection must be done in rural areas, slums and other low privilege areas for Livelihoods Enhancement Action Plan. The Office Working environment has an organic way of environment.
You can expect more of Soft Skills imbibed and technical skills like designing and documentation.

Academic courses relevant to the project: Environment development and climate change(mostly humanities included)

Learning Outcome: Identification of key economic challenges and opportunities in rural areas.
Understanding of income levels, employment patterns, and livelihood strategies.
Insights into resource utilization, agricultural practices, and access to markets.
Evaluation of social and environmental factors affecting rural livelihoods.
Basis for designing targeted interventions and policies to improve rural livelihoods.

Student Write-up:

PS-I Project Title: Livelihoods in a Village & Trends in Educational Societies

Short Summary of work done: We had the PS in 2 phases, in 1st phase we had to stay in a village in telangana and understand the village in Livelihood and Economical terms and make a report on the same. In 2nd phase we had to go to different schools(government, private, residential) and collect information like student teacher ratio, boys girls ratio, infrastructure, major problems, etc and make a comparitive trend anaylasis based on the data collected.

Objectives of the project: Understanding a village in Economical and Livelihood terms and staying there for 3days. In educational trends project we had to understand the trend difference between various schools(government/private/residential)

Tool used: Interviewing people, documents for noting key information, Recording footages and caputuring images

Details of Papers/patents: None

Brief description of the working environment: Akshara Livelihood doesn't have any chairs or tables for working, you just have to sit on a mattress laid on the floor, so the working environment here is very different from other companies. Company just expects you to interact more with different people(mostly vulnerable/poor) and document it in a format such that there can be a trend analysis drawn out of it.

Academic courses relevant to the project: None

Learning Outcome: Interpretation and data analysis of the collected data

---

PS-I station: Akshara Livelihoods Pvt. Ltd. , Hyderabad

Student

Name: NEEL SAKET RACHERLA . (2021AAPS1523H)

Student Write-up:

PS-I Project Title: Data Collection

Short Summary of work done: went to a village and stayed there for 2 nights had to interview people regarding their livelihoods and finances. Made a presentation and report

about the village. Then for next phase of work we interviewed nearby petty entrepreneurs who earn less than 25k to understand their finances.

Objectives of the project: Empathizing with minority groups and the less fortunate by staying in a village and interviewing petty entrepreneurs.

Tool used: Powerpoint

Details of Papers/patents:none

Brief description of the working environment: The office is a small flat which adopts "organic lifestyle" so we sit on the floor with mats. Expected to learn something related to website development as posted on PSMS but there was no software or engineering related work.

Academic courses relevant to the project: None

Learning Outcome: Moral learnings such as being more grateful

---

PS-I station: Alma connect - customer relationship management , New delhi

Student

Name: PRIYANSHU SETHI . (2021A4PS3101H)

Student Write-up:

PS-I Project Title: Backend Operations

Short Summary of work done: Prospecting refers to the process of searching for and identifying potential customers or clients for a business. It is a critical activity in sales and marketing that involves identifying individuals or companies who may have an interest in a product or service and could potentially become customers. For alma connect I tried finding out the contact number and email IDs of staff from different departments from the universities. These department staff also called the stakeholders from our perspective were from 6 different departments namely: 1) Development 2) Alumni relations 3) Advancement 4) Prospect management 5) Donations and fundraising 6) Communications

and marketing The task included simply copying and pasting the name, title, phone number, and email of a stakeholder from the universities' web page. Found RSS feeds for over 25 unique media houses. We simply had to click on the LinkedIn profile link of the university that we had to find the number. On the LinkedIn page of the university, we would find the alumni page of the university where the number of active LinkedIn using alumni would be given to us. All we had to do now was simply copy and paste the number in the Google sheet provided to us for the same.

Objectives of the project: Work with the operations team of the company to help them with tasks that help them with business development.

Tool used: Excel and google sheets

Details of Papers/patents: None

Brief description of the working environment: The team from the company was very supportive, our queries regarding the work allotted to us was quickly listened to and resolved. We were appreciated from time to time that kept us motivated throughout the entire duration of the program. Though we were worked remotely it never felt like it. But the work that was given to us by them was not that we were expecting to do, our tasks included just copy and pasting data from different websites and compiling them in a google sheet that was shared wit us. We gained no exposure to other technical areas like finance or technology or anything that is under the curriculum of our graduation degree.

Academic courses relevant to the project: None

Learning Outcome: We learned the use of excel, learned how to prospect for a business.

PS-I station: Alma connect - customer relationship management , New delhi

Student

Name: CHINNI VAMSHI KRUSHNA . (2021A7PS2084H)

Student Write-up:

PS-I Project Title: Backend Operations

Short Summary of work done: collected the data from the google and pasted it in the google sheet, it was purely a manual work, did not include any learning as such.

Objectives of the project: to support the data fetching operation

Tool used: Excel

Details of Papers/patents:nothing

Brief description of the working environment: it was a nice environment but the learnings are complete zero.

Academic courses relevant to the project: nothing

Learning Outcome: nothing

PS-I station: Alma connect - customer relationship management , New delhi

Student

Name: SAHIL SOMIL . (2021AAPS1582H)

Student Write-up:

PS-I Project Title: ALUMNI NEWS MODULE

Short Summary of work done: I worked on Almaconnect's Alma News Module. It is one of almaconnect's four products. My job began with prospecting (scraping data from the websites of colleges and institutions to find possible customers). My second objective was to gather RSS feed links for various news articles that input data into our News Module. The third assignment was harvesting LinkedIn data. Meanwhile, we were directed to read through the company's website and other materials to learn about the technology underlying the real module.This pretty much sums up my job at Almaconnect.

Objectives of the project: Alumni News Module, Prospecting, Professional communication, RSS

Tool used: Excel

Details of Papers/patents:N.A.

Brief description of the working environment: Almaconnect has a relaxed work atmosphere. Because the majority of the individuals I encountered were from BITS, it was extremely natural for us to call them as bhaiya and speak to them as if we were speaking to a senior. It is an excellent location to attend if you want a relaxed PS-I that requires you to undertake non-technical tasks. When it comes to expectations, As previously said, it is a non-tech job, so you will not have any such tech exposure, but if you manage effectively, you will have plenty of spare time each day to concentrate on your IT skills.The things I acquired from this PS-I are mostly soft skills and a little bit of excel, so overall it's a great and welcoming place for non-tech work that doesn't need much more than your honest time.

Academic courses relevant to the project: It's non-tech work so no courses required.

Learning Outcome: Soft Skills - (Communication , Team Work etc) , Excel.

PS-I station: Americana Restaurant , Sharjah, USA

Student

Name: KHUSHI SAMANTARAY (2021A3PS1127G)

Student Write-up:

PS-I Project Title: data analytics

Short Summary of work done: Learnt basics of python which was further used to perform exploratory data analysis on various data sets. Learn reading graphs to find the various trends of data. Developed a basic understanding of blockchain, strategic planning and consulting skills

Objectives of the project: finding trends in data sets

Tool used: jupyter notebook , vs code

Details of Papers/patents:NA

Brief description of the working environment: There were friendly meets in which we could ask our doubts regarding company's working. There were data analytics projects which helped us understanding the concepts even better. The mentors were available to guide us anytime.

Academic courses relevant to the project: No idea

Learning Outcome: python, exploratory data analysis

PS-I station: Americana Restaurant , Sharjah, USA

Student

Name: DIVYESH AGRAWAL . (2021A3PS2612H)

Student Write-up:

PS-I Project Title: Introduction to Consulting

Short Summary of work done: A case study on "Bankable Agricultural Solutions", which involved research into the shortcomings of the Indian Agriculture Industry and coming up with a business model that would capitalize on them. Furthermore, attended a variety of informative sesssions by the Industry Mentor.

Objectives of the project: Conducting Consulting Case Studies

Tool used: Powepoint, Python, Guesstimates

Details of Papers/patents:-

Brief description of the working environment: Quite a collaborative working environment, the Industry Mentor, Mr. Navdeep, was extremely helpful with any doubts and queries and did his best to explain the topics taught as clearly as possible, and even offered a look behind the scenes of Americana, as they gave us a tour through their Data Analytics setup. Throughout the course of the Internship, we had several detailed

sessions on a wide array of topics, ranging all the way from Business Strategy to Data Analytics and Business Intelligence.

Academic courses relevant to the project: -

Learning Outcome: Holistic development of Research, Presentation and Thinking Skills. Furthermore, the interactive sessions with our Industry Mentor were highly enlightening on topics such as Business Strategy, Consulting, Data Analytics, and Business Intelligence and Data Pipelines.

PS-I station: Americana Restaurant , Sharjah, USA

Student

Name: SHREYA AIYER (2021A7PS0014G)

Student Write-up:

PS-I Project Title: EDA and Consulting

Short Summary of work done: The center conducted some sessions on basic EDA and consulting roles. We performed EDA analysis of a dataset we cleaned up, and prepared a final consulting oriented presentation.

Objectives of the project: EDA of datasets pulled independantly from the internet

Tool used: Python and Python libraries - Matplotlib, Numpy, Pandas, Seaborn

Details of Papers/patents:-

Brief description of the working environment: There was support from the center in conducting workshops to teach skills, and the company mentor had a good disposition. However, the project was extremely lacking - it had nothing to do with the company and their targets. It would have been far more beneficial had we been assigned a project relevant to them that we could have worked on more rigorously.

Academic courses relevant to the project: -

Learning Outcome: Plotting graphs with the below mentioned libraries in Python

---

PS-I station: Americana Restaurant , Sharjah, USA

Student

Student Write-up:

PS-I Project Title: Data Analytics

Short Summary of work done: learnt about data analytics, also learnt about some ml models

Objectives of the project: Learnt about digital analytics, Google analytics, multi-channel funnel reports, Google Adwords.

Tool used: Numpy, pandas, matplotlib etc.

Details of Papers/patents:N/A

Brief description of the working environment: okayish

Academic courses relevant to the project: None of my academic courses were relevant to the project

Learning Outcome: Communication and presentation skills, got introduced to the field of digital analytics.

PS-I station: Americana Restaurant , Sharjah, USA

Student

Name: VINEET GHOSH (2021A7PS2644G)

Student Write-up:

PS-I Project Title: 1) Analysis of Top 50 Fast-Food Chains in the USA (2021); 2) Car Price Prediction using Machine Learning

Short Summary of work done: Worked on 2 projects, both based on Data Science. There were a few meets where the mentor covered topics like Business Intelligence, EDA etc. Also, our PS1 faculty conducted few Group Discussions.

Objectives of the project: To use a data driven approach to identify key outcomes and make decisions based on Exploratory data analysis and Machine learnig

Tool used: Machine Learning, EDA

Details of Papers/patents: None

Brief description of the working environment: PS1 was online, so, there wasn't much work at all. Interaction was limited to one meet per week where the mentor would give a brief overview of a topic such as EDA. There was minimal learning during the PS1 and both the projects were based on prior knowledge and skills.

Academic courses relevant to the project: Machine Learning, Data Science

Learning Outcome: EDA, Business Intelligence

PS-I station: Americana Restaurant , Sharjah, USA

Student

Name: RAGHUNENDRA . (2021A8PS1542H)

Student Write-up:

PS-I Project Title: Consulting

Short Summary of work done: We came up with a start up idea and then made a pitch deck for the same, it included revenue analysis, cost analysis, guesstimates and much more

Objectives of the project: To find out how to make a pitch deck after formulating your idea from scratch.

Tool used: Canva, excel

Details of Papers/patents:no

Brief description of the working environment: Everything was nice, the instructors were supportive

Academic courses relevant to the project: FOFA, Mathematics

Learning Outcome: Financial Modelling, presentation, soft skills, etc

---

PS-I station: Americana Restaurant , Sharjah, USA

Student

Name: MEGNATH B TRIVEDI . (2021AAPS0567H)

Student Write-up:

PS-I Project Title: Exploratory Data Analysis with Python

Short Summary of work done: Exploratory Data Analysis (EDA) was taught in the first few sessions using which we had to take a CSV file of our own and apply the EDA concepts and draw useful conclusions from them.

Objectives of the project: To make various plots and graphs using libraries like pandas, numpy, seaborn and matplotlib on python

Tool used: Python, Numpy, Pandas, Matplotlib, Seaborn, Excel

Details of Papers/patents: None

Brief description of the working environment: Our mentor Mr. Navdeep was well approachable and had great knowledge in this field. He also referred one more well experienced person in these libraries to take a session. We weren't introduced to any other employees.

Academic courses relevant to the project: .

Learning Outcome: We learnt various libraries on python as told above. The highly interactive working interface of the company was shown to us and the flow of data within the company

---

PS-I station: Americana Restaurant , Sharjah, USA

Student

Name: ADITYA PRASANNA KUMAR (2021AAPS1919G)

Student Write-up:

PS-I Project Title: Data Analytics

Short Summary of work done: For midsem project, we took a dataset of the 50 most popular fast food restaurant chains in the US and used EDA to obtain some info about them. We obtained several correlations between different aspects of the dataset such as amount of sales, number of stores, number of purchases, etc. For our final project we used some ML models to semi accurately predict car prices based on data from the dataset.

Objectives of the project: To perform exploratory data analysis on a data set that predicts car prices

Tool used: Python, Jupyter, and other python libraries

Details of Papers/patents:-

Brief description of the working environment: It was an online station so it was quite comfortable

Academic courses relevant to the project: -

Learning Outcome: We learnt how to perform exploratory data analysis on a data set and how to make semi accurate predictions using some ML and AI models.

PS-I station: Americana Restaurant , Sharjah, USA

Student

Name: SIMRAN SRIVASTAVA (2021AAPS2931G)

Student Write-up:

PS-I Project Title: Car Price Prediction Model

Short Summary of work done: We learnt about Exploratory data analysis using python and also learnt about machine learning models and their implementation.

Objectives of the project: The aim of the project was to implement various Machine Learning models in order to predict the price of a used car based on a given number of factors.

Tool used: Python libraries like numPy, Pandas, seaborn

Details of Papers/patents:none

Brief description of the working environment: It was a great and encouraging environment to work in. Our expectations and questions regarding any topic were fulfilled by the company. Communication skills was improved because of frequent group discussions, presentations.

Academic courses relevant to the project: Machine Learning , Deep Learning, Data Analytics

Learning Outcome: Learnt about the various python libraries involved in data analysis

---

PS-I station: Americana Restaurant , Sharjah, USA

Student

Name: MAYANK GARG . (2021ABPS1674P)

Student Write-up:

PS-I Project Title: Data Analytics

Short Summary of work done: During the PS-I at Americana Restaurants in Sharjah, valuable insights were gained in strategy, data analytics, generative AI, blockchain, and cryptocurrencies. Sessions led by Mr. Navdeep covered the distinction between strategy and planning, the importance of a strategic mindset, and data visualization techniques. Practical experience in Python and PowerBI enabled data analytics and exploratory data analysis. The mid-sem project focused on analyzing literacy rates and infrastructure in India to identify factors affecting education. Collaboration in group discussions and practical projects improved communication and interpersonal skills. Overall, the internship provided a well-rounded learning experience in diverse areas, equipping the participant with strategic thinking, analytical skills, and knowledge of emerging technologies for future academic and professional growth.

Objectives of the project: Learning Data Analytics

Tool used: Python, Pandas, Seaborn

Details of Papers/patents:NA

Brief description of the working environment: At Americana Restaurants in Sharjah, the working environment fostered learning and collaboration. Expectations from the company involved active participation in sessions, practical projects, and group discussions, applying theoretical knowledge to real-world scenarios, and engaging in data analytics tasks using Python and PowerBI.
During PS-I, valuable skills were acquired in strategy formulation, data analytics, generative AI, blockchain, and cryptocurrencies. Hands-on experience in exploring data, understanding the importance of a strategic mindset, and delving into emerging technologies enriched the learning journey. The internship provided a well-rounded experience, preparing the participant for future academic and professional pursuits.

Academic courses relevant to the project: Artificial Intelligence and Machine Learning

Learning Outcome: Understanding the difference between strategy and planning,
Developing a strategic mindset for decision-making,

Practical experience in data analytics and visualization using Python and PowerBI,
Conducting exploratory data analysis for insights,
Exposure to data management and architecture,
Knowledge of generative AI, blockchain, and cryptocurrencies,
Application of knowledge to real-world situations,
Improved collaboration and communication skills.

PS-I station: Americana Restaurant , Sharjah, USA

Student

Name: TARUN NEGI . (2021B1A30831P)

Student Write-up:

PS-I Project Title: Consulting project

Short Summary of work done: In my Ps there was not much interaction we had 4-5 meets only just about various topics of data analysis and strategy, had a session on using EDA, nevertheless i utilized my ps by developing my own skills not much of a learning from the Station itself

Objectives of the project: We chose the projects depending on whether we wanted to do EDA(python) data analysis, or a consulting project I took the consulting one, mine project was an Investment deck for a foreign investor to increase their investments in India. The projects were chosen by us

Tool used: Python, Powerpoint

Details of Papers/patents:n/a

Brief description of the working environment: mainly we didn't had a chance to work with the ps station itself, which i didn't liked cause there were just like sessions for some kind of course which we can also got through online mode, i wanted to work and learn and develop real-life skills by working on real-life project but didn't had a chance, sessions were nice but waste of time for me.

Academic courses relevant to the project: n/a

Learning Outcome: I learned the art of presentation and how to put up concise, useful information and present it in a deck, I also learned a lot about the FDI inflows in India, and major sectors, government and state policies for the same

---

PS-I station: Americana Restaurant , Sharjah, USA

Student

Name: NAVYA SIROSH KUMAR (2021B2A30905G)

Student Write-up:

PS-I Project Title: Consultancy Project- Indian Aviation Industry

Short Summary of work done: Critical analysis of strategies opted by different companies along with the application of EDA on different datasets to discover patterns and trends using graphical representation.

Objectives of the project: To compare the business models and economics of two giants in the aviation services industry in India and to analyze the strategies implemented by them which led to the success of one and the failure of the other.

Tool used: Python using Jupyter Notebook

Details of Papers/patents:-

Brief description of the working environment: I had the pleasure of engaging with the Americana team throughout as they had immense enthusiasm for teaching us new things. I learned new skills like exploratory data analysis using Python, the basics of Power BI, and strategic mindset and got a chance to apply the theory to practice.

Academic courses relevant to the project: -

Learning Outcome: The case study presented a valuable lesson for struggling commercial carriers to draw inspiration from IndiGo's success in India's price-sensitive market. IndiGo's achievements were founded on a focus on efficiency and cost-effectiveness, implementing the hub and spokes model to curtail expenses. On the contrary, Jet Airways' adherence to a conventional full-service approach and an unwise acquisition resulted in substantial losses. The key takeaways- to ensure growth and avoid

similar pitfalls, airlines must adapt their strategies, prioritizing cost-efficiency and operational excellence, while being sensitive to customer preferences. This approach proved to be instrumental in fostering the success and expansion of the aviation industry in India and beyond.

PS-I station: Americana Restaurant , Sharjah, USA

Student

Name: SUDARSAN MOHANCHANDER . (2021B3A70558H)

PS-I Project Title: Data Analysis

Short Summary of work done: During my PS1 experience, I engaged in a diverse range of activities aimed at enhancing my skills and knowledge. Firstly, I actively participated in various classes that provided valuable insights into relevant subjects. As part of a data science project, I had the opportunity to apply theoretical concepts to real-world scenarios, gaining practical experience in data analysis and interpretation. Moreover, I had the privilege of observing the operational dynamics of an Americana restaurant, obtaining valuable insights into the workings of a company in the hospitality industry. Throughout the program, quizzes, presentations, and group discussions were integral components, fostering my ability to communicate effectively, collaborate with peers, and present ideas succinctly. Overall, my PS1 journey was a remarkable learning experience that not only deepened my understanding of core concepts but also strengthened my practical acumen and interpersonal skills

Objectives of the project: The objective is to acquire proficiency in creating diverse graphs and charts within Jupyter Notebook. Additionally, we aim to derive insightful trends and patterns from the obtained results. This will involve a comprehensive exploration of data visualization techniques, enabling us to present information in a clear and concise manner while extracting meaningful insights to facilitate informed decision-making.

Tool used: Jupiter, VS Code, Python(Pandas, Matplotlib, numpy, seaborn).

Details of Papers/patents:-

Brief description of the working environment: I experienced a professional working environment and was expected to be proactive, eager to learn, and contribute to the company's success. The period offered me practical exposure to industry practices, fostering problem-solving skills and adaptability.

Academic courses relevant to the project: Foundations of Data Science

Learning Outcome: Data Analysis

PS-I station: Avricus Pvt. Ltd. - Content Optimization , Delhi

Student

Student Write-up:

PS-I Project Title: Script Writing, Notification Design, Cold Calling , Data Entry.

Short Summary of work done: We worked on writing scripts. Asked us to use AI like chatgpt and bardAI for the job. Then asked us to do cold calling to sell services. Lots of negative critisism of the service and hence cold calling was stopped. Did a horrible thing by forcing us to use personnel numbers for this job, even when we repeatedly refused. Threaten to influence grades and make work environment hard at every small issue. Then made us design notifications and then did data entry job by uploading information of many colleges into a data entry protal. No fixed projects were there and the company made us work at random company building operations .

Objectives of the project: Random Works of the company.

Tool used: Usd ChatGPT and BardAI at times.

Details of Papers/patents: None

Brief description of the working environment: There are no employees of the company. Only two co-founders and both are college student of DTU and NSIT. It is there startup. The company does not use name Avricus anywhere. Try searching College Setu for more info about the companies works. Apart from the co-founders are interns and only interns. Our company instructor was also an intern. There are only college students working here. Only learning was giving very good prompts of ChatGPT , which I did not know before since I had never used ChatGpt.

Academic courses relevant to the project: Technical Report Writing.

Learning Outcome: Asked us to use ChatGPT for content creation, so we now know how to give the best prompts. Interpersonal skills developed a bit.

PS-I station: Avricus Pvt. Ltd. - Content Optimization , Delhi

Student

Name: PRANAV GROVER (2021A4PS2898G)

Student Write-up:

PS-I Project Title: Machine learning- No Code tools and chatbot

Short Summary of work done: In this project, I successfully utilized no-code tools to scrape data from websites for the content team, created a chatbot for the website, and developed a file conversion and data training portal for internal use. The data scraping process involved efficiently gathering relevant information, streamlining the content team's workflow. The chatbot development included designing conversational flows, integrating natural language processing, and crafting personalized responses to improve user interactions. Additionally, the file conversion and data training portal enabled employees to convert files into a suitable format for chatbot training and update the chatbot's knowledge base. Through this project, I gained valuable experience in using no-code tools, enhancing my skills in data extraction, chatbot development, and creating efficient internal portals. These outcomes have equipped me to contribute to data-driven decision-making, enhance user engagement, and streamline processes within organizations. Overall, this project showcased the power of no-code tools in facilitating data-driven workflows and improving user experiences.

Objectives of the project: To scrape data from websites for the use of content tean using no code tools, create a chatbot for the website using nocode tools and create a file

conversion and data training portal for the chatbot to be used by employees of the organisation.

Tool used: Parsehub, Landbot, VSCode

Details of Papers/patents: Na

Brief description of the working environment:
The working environment at the company is characterized by a small team comprising fewer than 15 workers, excluding the PS-I students. The majority of the workers are interns who are concurrently pursuing their college education. The organization operates with a limited budget and lacks well-defined work structures. However, the contributions made by the PS-I students have been successfully implemented and utilized by the company, demonstrating the value of their involvement. Despite the constraints in size and resources, the collaboration with PS-I students has highlighted the potential for achieving meaningful outcomes within these limitations.

Academic courses relevant to the project: Java, python

Learning Outcome:
The major learning outcomes of the project include:
Data Scraping: Through the use of no-code tools, I gained proficiency in scraping data from websites. This skill allowed me to efficiently gather relevant information for the content team, streamlining their workflow and providing them with accurate and up-to-date data.
Chatbot Development: By leveraging no-code tools, I successfully created a chatbot for the website. This involved designing conversational flows, integrating natural language processing, and crafting personalized responses. This experience enhanced my understanding of chatbot development and its potential for improving user interactions and providing automated support.
File Conversion and Data Training: As part of the project, I developed a file conversion and data training portal specifically for the chatbot. This portal enabled employees to convert files into a format suitable for chatbot training and update the chatbot's knowledge base. This experience equipped me with the skills to create efficient tools that facilitate data management and training processes within an organization.
Overall, the project provided valuable insights into the capabilities of no-code tools, empowering me to extract and utilize data effectively, create interactive chatbot experiences, and develop customized portals for internal use. These learning outcomes are highly applicable in various contexts, allowing me to contribute to data-driven decision-making, enhance user engagement, and streamline processes within organizations.

Name: DHRUV GARG . (2021B2A32306P)

Student Write-up:

PS-I Project Title: Developing & Hosting flask app on Amazon Web Services and on Render & Automation of Data Access, API Calls, and Error Email Communication in Google Spreadsheets with the use of Google Apps Script

Short Summary of work done: The project involved developing a Flask web application and hosting it on two different platforms: Amazon Web Services (AWS) and Render. The Flask app was built to automate data access, API calls, and error email communication within Google Spreadsheets using Google Apps Script. It allowed seamless data retrieval from external sources via API calls, avoiding redundancy with a data checker. The project leveraged time-based triggers to schedule automated executions and implemented error email notifications for prompt error handling. The deployment on AWS involved utilizing EC2 for virtual servers, RDS for database management, and S3 for file storage.

Objectives of the project: 1. Web Application Development: Create a Flask web programme that automates data access, API requests, and error email communication in Google Spreadsheets. 2. Automate data access from Google Spreadsheets to eliminate human data entry and manipulation. 3. API Integration: To get data from external APIs and improve Google Spreadsheets with dynamic data. 4. Time-Based Triggers: To schedule automated task executions using Google Apps Script to ensure regular updates and data refreshes. 5. Error Handling and Email Communication: To set up a process that identifies and manages API request problems and delivers automatic email notifications to users. 6. AWS and Render Cloud Hosting: To host the Flask web application on two cloud platforms, ensuring scalability, stability, and rapid deployment. 7. Security and Privacy: Secure authentication and data privacy when visiting external APIs and managing sensitive data. 8. Documentation and Collaboration: To document and collaborate with developers to promote knowledge exchange and code contributions. 9. Customization and Adaptability: To allow users to customise API parameters and settings to their needs. 10. Learning Experience: To teach participants web development, cloud hosting, automation, and integration through hands-on practise.

Tool used: Visual Studio Code,Python: Flask,Git,Amazon EC2,Amazon S3,Render,Google Sheets, Google Apps Script,Google APIs

Details of Papers/patents: None

Brief description of the working environment: Working Environment: The working environment at the company has room for improvement in terms of organization and clarity in processes and communication channels.Furthermore, it would be beneficial to provide more support and recognition for employees' efforts, which can help boost morale and foster a greater sense of engagement among the workforce.
Expectations from the Company: Although the company's expectations can sometimes feel challenging, management's limited understanding of employees' challenges may sometimes result in demanding expectations and ambitious goals, which can inadvertently contribute to stress and burnout among team members. The company could benefit from investing more in employee training and development, which would help enhance skillsets and create more opportunities for growth.
Learning Opportunities: Despite some challenges in the working environment, there are still valuable learning opportunities available within the company.
In general, the challenging working environment and high expectations from the company can sometimes create a less-than-ideal atmosphere that may limit employees' opportunities for learning and growth.

Academic courses relevant to the project: None

Learning Outcome: The project taught web development, cloud hosting, automation, and Google Apps Script integration. Students enhanced data management and application development with practical skills.

PS-I Project Title: Wealth Management

Short Summary of work done: Our basic work included, assessing the potential client, suggesting the product that would work best for them and then getting a meeting fixed to explain in elaboration about the products they are interested in. We also learnt a lot before getting our projects. We had sessions undertaken by renowned individiuals, so most of us used to red about the topics or new terms we heard during the day, in detail which helped us to learn a lot about the financial industry and the market.

Objectives of the project: We had to communicate with High Net-worth Individuals and attract them as potential investors in our company's PMS and increase the assets under management. The project goal was to develop a comprehensive marketing and communication strategy to target HNIs and effectively convey the benefits of our PMS.

Tool used: Just Excel, not extensively

Details of Papers/patents: None

Brief description of the working environment: The working environment for interns is nurturing and fosters growth and learning. The company is aiming to provide us with valuable experiences and prepare us for successful careers in the financial industry. We were encouraged to actively participate in projects and daily operations, allowing us to gain practical knowledge and hands-on experience. Bonanza Portfolio treats interns as part of the family rather than mere temporary employees. This means that we are included in team activities, meetings, and social events, creating a sense of belonging and camaraderie. When you achieve something cool or hit a milestone, they cheer you on like crazy. That positive reinforcement keeps you super motivated and pumped to give your best every day. The learning experience is top-notch. You get hands-on with real projects and learn from some seriously experienced pros. They even hook you up with a dedicated mentor who's like your personal guide to success. Respect and care are integral values for the organisation, according to me. Not only do they care about your professional growth, but they also look out for your well-being. The working environment is chill and inclusive, plus they make sure you don't burn out. It's all about that work-life balance. Honestly, I couldn't have asked for a better internship. It's enriching, empowering, and

nurturing all at once. Bonanza Portfolio rocks at making you feel respected and cared for while you're on this incredible journey with them.

Academic courses relevant to the project: DRM as far as I know, haven't done any finance course except Fundafin before the internship

Learning Outcome: Throughout my internship, I learned the importance of professionalism, integrity, and ethical conduct in the finance industry. I enhanced my time management skills, effectively prioritising tasks, meeting deadlines, and delivering high-quality work within a fast-paced environment. I honed my ability to put forward the concepts in a clear and concise manner. I gained experience in preparing and delivering presentations. Gained insights into the finance industry and knowledge about the markets and how important it is to stay updated in this particular industry. I learnt about effective communication during the task we were given. I also learnt how to cross- sell, i.e how we can upsell or sell a product different from the one we are supposed to catering to the customer's needs. I also gained a lot of industry knowledge as you have to know what you are talking about with the customers you are dealing with. I faced the challenge of language barrier, I had cold-called potential clients which only spoke a particular language. I also learnt to keep emotions out of work and not succumb to rejections and be persistent and consistent with the callings. I also learnt that we have to deal with different potential clients in a different manner and it is not like the same particular script of pitch can work with every client, you have to deal with different clients in a different way.

PS-I Project Title: THE REVIEW OF E-KYC, ATM AND VIDEO KYC PROCESSES

Short Summary of work done: My project was to review the Video KYC and E-KYC processes, along with analyzing the onboarding of potential customers using the ATM interface. This project also included providing suggestions and implementing them wherever possible. This project involved working closely with KYC, E-KYC applications and respective tablets which had APKs. This also involved a walkthrough of the related pages in website and understanding related intents in the Chatbot. This helped us to understand the overall user experiences for a customer.

Objectives of the project: My project was to review the Video KYC, Net Banking, and E - KYC processes, along with the onboarding of potential customers using the ATM interface.

Tool used: NA

Details of Papers/patents:NA

Brief description of the working environment: The working environment is good. The employees are very friendly and forthcoming to help. Although it was a bit cramped, this will no longer be an issue as they are moving to a much bigger office space. They just require you to be willing to learn. You need to be a little proactive while asking for work, as the employees already have a lot on their hands and might forget you. Overall, it was a positive experience.

Academic courses relevant to the project: FOFA, DRM

Learning Outcome: My time in CUB was mutually beneficial to both me and the bank. I was taught valuable things from the project standpoint and in a more general sense. I learned how to approach services that customers use in different ways. I learned how much testing and preparation goes into a process as simple as creating a landing page. I understood how potential customers could be onboarded using the ATM interface and gave suggestions on how ATM usage could be bettered.

PS-I station: Consulting & Beyond - Forecasting , Chennai

Student

Name: SHUBH PANKAJ PATEL . (2021B3A71110P)

Student Write-up:

PS-I Project Title: Sales Forecasting for Departmental & Retail stores

Short Summary of work done: During the course of the internship, we were entrusted with a comprehensive project that demanded our analytical and creative skills. Firstly, we were provided with the sales data of the client spanning the last 5 years. Our primary

objective was to leverage this data to forecast future sales for each product and brand accurately. In addition to the sales forecasting, we were tasked with developing an efficient inventory management tool to optimize the client's stock levels and ensure smooth operations in their garments store. As if these challenges weren't enough, we also had the opportunity to showcase our spatial planning expertise by creating a store planogram for the client, maximizing product visibility and enhancing the overall shopping experience. This multifaceted project allowed us to gain invaluable hands-on experience and contribute meaningfully to the client's success.

Objectives of the project: Sales forecasting through R , Python & Creating an Inventory Management tool

Tool used: R, Python, Excel

Details of Papers/patents:nil

Brief description of the working environment: During my internship, I found the work environment to be quite good, fostering a positive and collaborative atmosphere. The team was friendly and supportive, which made it easier to adapt to the new role. Meetings were held regularly, usually once every one or two weeks, providing an opportunity to discuss progress and address any concerns. In the initial month, our workload was relatively light, allowing us to ease into the project smoothly. However, during the second month, things became more intense as we finally received all the data about the client, causing a comparatively hectic period. If the introductory period is shortened in the future, it could significantly improve the overall experience of the internship and make it an even better project.

Academic courses relevant to the project: -

Learning Outcome: During the job, we had a great chance to learn a lot of new skills. R and Python were important things to learn because they helped a lot with data analysis and forecasts. With these programming languages, we were able to successfully manipulate data and build strong models for sales forecasting, which gave our decision-making a data-driven edge. We also learned more about Excel's macro VBA, which helped us get better at automating chores and speeding up processes. With this new information, we were able to make a complex inventory management tool for the client.

Student Write-up:

PS-I Project Title: Optimizing Production Planning and Inventory Management in Dhoti Manufacturing.

Short Summary of work done: Throughout the internship, I delved into various stages and processes involved in manufacturing, gaining valuable insights into how products are created and delivered to clients. One of the significant aspects of my internship was learning to harness the power of data. I worked extensively with datasets containing order quantities, sales order dates, and machine capacity details. Utilizing Excel's capabilities, I acquired the skills to analyze and interpret this data, which enabled me to provide effective production plans to clients. This hands-on exposure allowed me to understand the importance of data-driven decision-making in optimizing manufacturing processes. Furthermore, I was introduced to the theory of constraints, a critical concept in the manufacturing industry. Understanding how bottlenecks can hinder production and impact overall efficiency, I learned to identify these bottlenecks through the capacity details of machines. Additionally, I gained insights into various strategies to overcome these constraints and enhance productivity.

Objectives of the project: Our client, a dhoti manufacturer, faced challenges in production planning, inventory management, fulfillment ratio of sales orders, and quality issues. They wanted to optimize inventory levels, improve production efficiency, reduce damages, and enhance sales order fulfillment.

Tool used: Power BI , Advanced Excel

Details of Papers/patents:none

Brief description of the working environment: During my internship at the company, I experienced a supportive and learning-based working environment. The mentors were easily accessible and always willing to help, fostering a positive atmosphere. Their guidance and approachability allowed me to confidently tackle challenges and learn new skills. The overall experience was rewarding, providing ample opportunities for professional development and networking.During my internship at the company, my main expectation was to gain a comprehensive understanding of the consulting industry and how the manufacturing sector operates. I was eager to learn and apply Power BI and advanced Excel skills to analyze data effectively, enabling me to provide production plans and solutions to clients. Throughout the internship, I was immersed in diverse projects, allowing me to acquire practical knowledge and insights. The experience not only met my

expectations but also empowered me with valuable skills and a deeper appreciation for the consulting and manufacturing domains.

Academic courses relevant to the project: Principles of Management

Learning Outcome: I Learned about how problems are addressed and solutions are found out in a consulting industry , had the opportunity to understand the manufacturing sector and about the various stages involved in the process . Moreover , i understood how to use power BI and excel to create production plan for manufacturers .

Student Write-up:

PS-I Project Title: Streamlining the supply chain of family run retail stores

Short Summary of work done: During this internship, I focused on streamlining the supply chain for family-managed retail stores in Tamil Nadu. The supply chain faced challenges due to rapid expansion, unorganized vendors, and manual operations. To address these issues, I conducted data analysis using Excel, implementing various methodologies. I performed Economic Order Quantity (EOQ) analysis to optimize order quantities, reducing costs and improving inventory management. Price range analysis and relevance mapping were employed to categorize products based on cost price and align them with target price ranges. Vendor management was improved by implementing a robust system, including supplier qualification processes and performance evaluations. I developed a purchasing plan considering product quantities and diversified sourcing to reduce reliance on specific regions. To control prices, I introduced negotiation, competitive bidding, and market analysis. Proactive seasonal planning ensured goods reached the warehouse ahead of the season, facilitating efficient barcode labeling and processing. Inventory management was enhanced by setting buffer stock parameters and streamlining stock movement from the warehouse to stores within six hours. I also created tools for purchase planning and logistics scheduling, aiding employee decision-making. Overall, the project focused on data-driven supply chain optimization, fostering better control, diversified purchasing, and stronger vendor relationships for the family-managed retail stores.

Objectives of the project: The objective of this project is to streamline the supply chain of family-managed retail stores, similar to Max, Reliance Trends, and Lifestyle, located in a tier 2 district of Tamil Nadu. The supply chain currently faces challenges of managing

the supply chain due to its fast expansion plans, unorganized vendors, manual operations, and the need for improved control measures.

Tool used: Excel

Details of Papers/patents:NA

Brief description of the working environment: During the online professional internship (PS-I), I had the opportunity to work in a dynamic virtual environment with the family-managed retail stores in Tamil Nadu. The internship provided a platform for remote collaboration and learning, enabling me to engage with team members and stakeholders virtually.
Throughout the internship, the company had high expectations for me to contribute actively to the project's success. They expected me to analyze and process data efficiently using Excel, conduct in-depth supply chain analyses, and develop practical tools and utilities to improve the supply chain operations.
During PS-I, I learned essential skills in data analysis, Excel proficiency, and supply chain management. I gained hands-on experience in conducting Economic Order Quantity (EOQ) analysis, price range analysis, and relevance mapping. Additionally, I developed insights into vendor management, purchasing planning, and price control measures.
The internship provided an excellent opportunity to enhance my problem-solving abilities, collaborate effectively in a remote setting, and communicate ideas clearly to stakeholders. I also gained valuable knowledge in supply chain optimization, data-driven decision-making, and implementing solutions to streamline operations.

Academic courses relevant to the project: Supply chain Management

Learning Outcome: Through this internship, I gained valuable insights into supply chain management for family-managed retail stores in Tamil Nadu. I developed proficiency in data analysis and Excel, allowing me to perform Economic Order Quantity (EOQ) analysis, price range analysis, and relevance mapping. I learned to address challenges in vendor management, purchasing planning, and price control measures. Additionally, I acquired skills in proactive seasonal planning and inventory management, optimizing stock movement to stores. Developing practical tools and utilities for purchase planning and logistics scheduling further enhanced supply chain efficiency. The internship provided a comprehensive learning experience in supply chain optimization, data-driven decision-making, and effective communication with stakeholders.

Student Write-up:

PS-I Project Title: Creating a strategic model for digital marketing and cultural orientation module for the UAE

Short Summary of work done: During PS-I, I collaborated with Crossbar Talent Management Solutions on a two-part project to expand their presence in the UAE market. In the first phase, I created a strategic digital marketing model for Crossbar's ESG, FCC, and Soft Skills offerings. This involved in-depth research on potential clients and competitors in the UAE training industry. The second phase focused on developing a Cultural Orientation Module, where I researched topics like cost of living, working culture, and tourism in the UAE. Throughout the project, I collaborated with my teammates, enhancing my market research and digital marketing skills, and gaining valuable insights into cross-cultural communication. Overall, the experience was enriching and prepared me for future challenges in the field.

Objectives of the project: The objectives of the project were to develop a strategic digital marketing model for Crossbar Talent's expansion into the UAE and create a Cultural Orientation Module focusing on Living and Working in the UAE.

Tool used: Google search, google slides, google sheets

Details of Papers/patents:NA

Brief description of the working environment: During PS-I at Crossbar Talent Management Solutions, I worked in a dynamic and collaborative environment, conducting research and analysis for the company's expansion into the UAE market. I contributed to client research, competitor analysis, and the development of a cultural orientation module. This experience improved my research, analytical, and cross-cultural communication skills, adding value to my academic journey and future career prospects.

Academic courses relevant to the project: None

Learning Outcome: The major learning outcomes from the project included gaining valuable experience in conducting client research and competitor analysis, enhancing cultural intelligence, and developing cross-cultural communication skills.

Student Write-up:

PS-I Project Title: Creating a Strategy for Client Outreach in UAE

Short Summary of work done: During PS-1, I along with my teammates worked on a project for Crossbar Talent, a talent management solutions company, focusing on the UAE market. In the first part of the project, we conducted research to identify potential clients for Crossbar's services in the UAE, with a specific emphasis on professional skills training in the domains of ESG, financial crime and compliance, and employability and soft skills. We also conducted a competitive analysis to understand the existing competition in the market. In the second part of the project, we shifted our focus to the culture of the UAE. We developed a UAE culture orientation module that served as a comprehensive guide, providing detailed information about the country's demographics, culture and value system, financial ecosystem, business ecosystem, and living and working in the UAE. This module aimed to assist individuals interested in starting a business, understanding the country's culture, or planning a visit. Ultimately, our research and analysis provided Crossbar Talent with valuable market insights and positioning strategies in the domains of ESG, financial crime compliance, and soft skills training. The UAE culture orientation module enhanced our understanding of the country and its cultural nuances while showcasing our research skills. In conclusion, our PS-1 experience enabled us to contribute to Crossbar's market intelligence, strengthen its competitive advantage, and support its expansion in the dynamic UAE market.

Objectives of the project: Making a UAE Culture Orientation Module, Finding Potential clients

Tool used: -

Details of Papers/patents:-

Brief description of the working environment: As it was an online PS, I had the privilege of working from the comfort of my home. At first, everything I did seemed new and exciting. Eventually, I got more familiar with the tasks I was assigned along with my teammates. When we started the PS, we expected to actually contact potential clients and implement our strategy in the real market but unfortunately due to time constraint and other reasons in our PS ststion we had to stop our outreach project midway and shift our

direction towards a new project which was to develop a UAE culture orientation module. We successfully completed this part of our project.
During this PS-1 I have I learnt how to conduct extensive research even with topics that are not easy to find, also through my research I have developed a deep understanding of the UAE market, including its cultural nuances, business practices, and market dynamics. In this PS I worked as part of a team, collaborating with other students to compile research findings and complete our tasks. I actively participated in meetings, where I shared and explained my research to ensure everyone was on the same page. This experience enhanced my communication and collaboration skills, enabling effective teamwork.

Academic courses relevant to the project: Theoretical report writing, Computer Mediated Communication

Learning Outcome: Enhanced research skills, Collaboration and teamwork, Improved communication skills

Student

Name: MEGHANA MUNIREDDY . (2021AAPS1528H)

Student Write-up:

PS-I Project Title: To develop a Client Outreach strategy and an Orientation Module for the UAE

Short Summary of work done: As Crossbar already has a few business partners in the UAE, we were initially tasked with devising a strategic model for Client Outreach in the UAE. These partners would help us reach out to other UAE companies and strategically interest them in Crossbar's training programmes. However, due to scheduling conflicts, we decided to refocus our project, as we would not be able to complete the previously allocated task on time. Consequently, we shifted our attention to developing an orientation module that was predominantly centered on the UAE region. This module was created with the intention of educating and enlightening individuals about the UAE. It is also meant to serve as an essential tool to facilitate a smooth transition and enhance the experience of individuals new to the country. The project has two main objectives: Phase 1: To

develop a strategic model for Client Outreach in the UAE Phase 2: To create an orientation module which primarily focuses on the UAE region Further details of the project are as mentioned below: Phase 1: To develop a strategic model for Client Outreach in the UAE For the first phase of our project, we were required to develop a comprehensive strategic model for Client Outreach and Digital Marketing in the UAE. Our primary objective was to promote Crossbar's training programmes and interest from other businesses on the assumption that the company is a new entrant to the market and that it provides professional skills training in the UAE. To do so, we studied about various companies in the UAE and the training programmes offered by them. Despite the multiple training programmes offered by Crossbar, in light of the assignment that was given to us for this undertaking, we mainly focused on the trainings in the following three fields, namely: Financial Crime Compliance (FCC), Environmental, Social, Governance (ESG) and Employability & Soft Skills. Phase 2: To create an orientation module which primarily focuses on the UAE region For the second phase of our project, we were required to create a UAE orientation module. The primary purpose of this orientation guide is to serve as a valuable resource for individuals who are new to the country or planning to visit/live there. Such a module provides essential information about the UAE's culture, customs, traditions, and practical aspects of daily life, helping newcomers adapt and navigate the local environment more smoothly. By providing cultural understanding, practical information, and social integration support, it is expected to contribute to a positive and enriching experience in the UAE. Topics for our orientation module included the following: Ice-breaker – 10 slides (5 Activities – 1 slide each for question and answer) Demographics – 20-25 slides Culture and Value System – 30-35 slides Financial Ecosystem – 30-35 slides Business Ecosystem – 30-35 slides Living and Working in UAE – 30-35 slides Tests and Quizzes – 20 slides (4 slides / 2 activities for each module) For this phase of the project, we had a group which consisted of five members. To move forward with the project, each of us chose the sections which intrigued us. Upon choosing our desired sections, we individually did the required study and research about the section we picked. Following this, we compiled all the information we gathered in a PowerPoint Presentation which had the above mentioned number of slides based on each section. Finally, once we were done with our individual section work, we got our orientation module to the last stage, i.e. completion, by combining our efforts into making a final product.

Objectives of the project: As this project was split into two parts, both the parts had different objectives. For the first phase of the project, the main objective was to develop a comprehensive and effective digital marketing strategy model for Crossbar Talent in the UAE. This required conducting extensive investigation using a variety of methods and tools. For the second phase of this project, the main objective was to develop an orientation module for Crossbar Talent which focused on the UAE region. This would help individuals who want to learn about the UAE and are completely unaware about the place make informed and educated decisions if they ever decide to move to the UAE or visit. It aims at providing any individual with complete knowledge of the place.

Tool used: LinkedIn, ChatGPT, Sources from Google as this project was mainly research oriented

Details of Papers/patents: The work we did as a team is attached below:
Phase 1:
https://docs.google.com/spreadsheets/d/134lGU0W8GzQd7GPlB0nX6_5nHdEaL7PUvtJAW3bGUKI/edit#gid=83121323
Phase 2:
https://drive.google.com/drive/folders/1sxbP3KrtWaoO76VHIVdb0ayKSP5TWy9A

Brief description of the working environment: Working Environment:
As my PS was online, the working environment was pretty comfortable. We were given a lot of work on some days but not as much on the others. Overall, it was balanced. It was a fun experience and helped me explore this field which I probably wouldn't have explored if not for this wonderful opportunity.
Expectations from the company:
By the time this PS ended, I just wanted to learn about this field and have a better understanding of digital marketing and client outreach. I expected the company to give me tasks accordingly, and it sure did match my expectations.
The only drawback was we did not have enough meets, but apart from that, this 8 week journey was great. I definitely have a few knacks up my sleeve which I didn't have before this great opportunity.
Learning during PS-1:
Devising a strategic approach for client outreach in the UAE required understanding local market dynamics, cultural nuances, and effective communication strategies. The process fosters intercultural competence, strategic thinking, and market analysis skills.
Similarly, creating an orientation module for the UAE helped enhance knowledge of cultural integration, instructional design, and cross-cultural communication, facilitating a positive and informed experience for newcomers.

Academic courses relevant to the project: Not sure as I'm an ECE student

Learning Outcome: Phase 1:
Thanks to this project, I have gained valuable knowledge that has contributed to my professional development and comprehension of strategic marketing in a foreign market. Primarily, I obtained insights into the necessary preparations for expanding a company's operations into an unfamiliar market such as the UAE. This involved understanding the local business culture, market dynamics, and customer preferences.
Furthermore, I have deepened my understanding of how to analyze and navigate a significantly different business culture when promoting a product. The distinct cultural disparities between the UAE and my home base in India posed distinct challenges that required adaptability and a nuanced approach.
This experience has broadened my perspective and improved my ability to tailor marketing strategies to specific cultural contexts.
Moreover, I have acquired valuable skills in conducting competitive research. Through the analysis of competitors' strategies and tactics in the UAE market, I have been able to identify areas where Crossbar Talent holds a competitive edge.
Phase 2:

During the process of creating a presentation for the UAE orientation module, I gained valuable insights and knowledge.
Firstly, I learned the importance of condensing and organizing information effectively to deliver a clear and concise presentation. I had to prioritize key cultural aspects and value systems to ensure the presentation remained engaging and informative.
Additionally, I recognized the significance of visual aids and multimedia elements in capturing
the audience's attention and enhancing their understanding. Incorporating relevant images, videos, and interactive elements proved to be highly effective in conveying the cultural nuances of the UAE.

Furthermore, I became aware of the importance of cultural sensitivity and ensuring that the content presented reflected a respectful and inclusive perspective. It was crucial to strike a balance between providing accurate information and fostering an appreciation for the diverse cultural landscape of the UAE.
Overall, the experience of creating the presentation for the UAE orientation module enhanced my skills in content organization, visual communication, and cultural sensitivity, all of which are crucial aspects of effective presentations in intercultural contexts.

PS-I Project Title: DEVELOPING A CLIENT OUTREACH STRATEGY FOR MOROCCO AND AN ORIENTATION MODULE FOR UAE

Short Summary of work done: Our first project focused on creating a market assessment strategy and implementing Crossbar's training programs in the country. We identified potential clients across diverse sectors through competitive analysis and provided recommendations for effective positioning in the global market. The second project involved designing a cultural orientation module to understand the differences

across various sectors of the UAE. The aim was to integrate Crossbar's training programs seamlessly with the UAE system and cater to the unique needs of the region.

Objectives of the project: The initial project centered on expanding Crossbar's training programs in Morocco and UAE. Our primary goal was to identify potential clients and enhance Crossbar's unique attributes. The second project involved creating a cultural orientation module specific to the UAE region.

Tool used: Excel, Powerpoint, Research

Details of Papers/patents: None

Brief description of the working environment: We were given our tasks during alternate weeks and had time to finish it. We only met with the mentor five times during the course of the PS-1. The company expected research work to be done and presented in a formatted structure. I learnt how to conduct research in the marketing sector and what all involves competitive analysis. I learnt about the ESG, Soft skills industry. My work also involved learning about the financial ecosystem of UAE.

Academic courses relevant to the project: None

Learning Outcome: Learnt about ESG, FCC, Employability and soft skills industry. conducted research about the financial system of UAE. Made presentations about the above.

Short Summary of work done: Summary of Practice School 1 Work Experience at Crossbar Talent Research: During my Practice School 1 internship at Crossbar Talent

Research, I gained valuable hands-on experience and developed essential skills for professional growth. The organization provided me with a dynamic learning environment to enhance my expertise in various areas. 1)Microsoft PowerPoint: I honed my proficiency in creating impactful presentations through Microsoft PowerPoint. Learning to effectively communicate ideas and data visually has been an invaluable asset for my future career. 2) Microsoft Excel: Throughout my internship, I became adept at using Microsoft Excel to manage and analyze data efficiently. This skill proved essential in handling various tasks and organizing information systematically. 3) Presentation Skills: Crossbar Talent Research provided ample opportunities to refine my presentation abilities. From crafting engaging content to delivering compelling speeches, I developed confidence and finesse in presenting ideas to diverse audiences. 4) Teamwork: Working at Crossbar Talent Research allowed me to collaborate with a diverse group of professionals. Emphasizing teamwork, I learned to adapt and thrive in a collaborative environment, fostering positive relationships and achieving collective goals. Overall, my Practice School 1 experience at Crossbar Talent Research not only provided me with a solid foundation in technical skills such as MS PowerPoint and MS Excel but also enhanced my communication and teamwork abilities. I am grateful for the invaluable learning experience, which will undoubtedly contribute to my future success in the professional world.

Objectives of the project: To create a module that can help new company to establish there business in morocco

Tool used: Ms Excel, ms PowerPoint.

Details of Papers/patents: One module for uae to help companies establishing there business in UAE.

Brief description of the working environment: The environment was good, the crossbar talent research mentor was very encouraging, we were having weekly meetings for the guidance of the new upcoming projects.
As it was my first official work with some organisation so i was excited for that and also were having very expectations from the ps1 and i am glad to say that all the expectation were fullfilled.
The main learnings were the team work and my presentation skills were enhanced, and now i am confident enough to present that in front of anyone.
At last I can confidentely recommend this ps1 station to anyone.

Academic courses relevant to the project: My project work was not based on any technical courses its more or like a management type of project.

Learning Outcome: Presentation skills and Excel skills are enhanced.

Student Write-up:

PS-I Project Title: Employability Readiness Tool

Short Summary of work done: In this project, Crossbar Talent Management Solutions will create a novel Employability Readiness Tool. In order to help job-seekers improve their employability and better meet the needs of employers, this tool will provide a systematic assessment of their readiness to enter the workforce. The tool collects information on each parameter through a number of different assessment methods, such as rating scales, yes/no questions, and descriptive responses. The individual's employability can be improved and well-considered career choices can be made with the information provided by the results. Crossbar Talent Management Solution's goal in introducing the Employability Readiness Tool is to equip people with the resources they need to achieve professional success. The goal of the project is to help people acquire the skills and confidence they need to find gainful employment. Crossbar Talent Management Solutions' goal 11 in developing this resource was to provide a mechanism for better matching job applicants' skill sets to open positions in the market.

Objectives of the project: The goal of this project is to create a six-month timeframe-appropriate Employability Readiness Tool that will assess an individual's preparedness for the workforce. The tool is an attempt to respond to the growing significance of employability readiness in today's competitive job market, where the possession of the right personal traits, knowledge, and abilities is essential.

PS-I Project Title: Employability Readiness Tool

Short Summary of work done: During my PS-I internship at Crossbar Talent Management Solutions, I contributed to the development of an Employability Readiness Tool (ERT) aimed at assessing candidates' employability readiness within a 6-month timeframe. Extensive research on Talent Management practices and existing assessment tools helped us define parameters and organize them into three levels: Fundamental Competencies, Advanced Competencies, and Niche Specializations. As a team member, I played a vital role in crafting thought-provoking questions and categorizing parameters into their respective levels. We assigned weightages and set thresholds for each parameter to create a comprehensive scoring system for holistic evaluation. Leveraging Typeform's branching capabilities, we developed a user-friendly interface that personalized the experience for candidates based on their responses. This allowed us to efficiently collect diverse information and accurately assess employability readiness. Throughout the project, I collaborated closely with industry mentors and faculty, honing my problem-solving and communication skills. We conducted trial runs with sample candidates and iteratively refined the scoring system to enhance accuracy.

Objectives of the project: Our aim is to create an Innovative tool that assesses and evaluates individual's employability readiness. By analyzing key parameters and character qualities, our tool will provide valuable insights for both job seekers and employers.

Tool used: Type form

Details of Papers/patents:N/A

Brief description of the working environment: During my PS-I internship at Crossbar Talent Management Solutions, I experienced a dynamic and supportive working environment, despite it being a remote work-from-home setup. The company fostered a culture of open communication, encouraging regular virtual meetings and seamless collaboration using various online tools. Throughout the internship, I was entrusted with meaningful responsibilities, including contributing to the development of the Employability Readiness Tool (ERT). The company's clear expectations and milestones helped me stay focused and motivated to deliver high-quality work within the specified timelines. Working remotely enabled me to adapt to a flexible schedule, which allowed me to balance my academic commitments with the internship tasks effectively. The virtual nature of the internship also sharpened my time management and self-discipline skills, as I had to

manage my own workflow and meet project deadlines. Overall, the remote internship experience at Crossbar Talent Management Solutions was both enriching and fulfilling. It allowed me to acquire practical skills, gain industry exposure, and develop a strong foundation in Talent Management and IT, paving the way for a promising career ahead.

Academic courses relevant to the project: Technical Report Writing (TRW)

Learning Outcome: Increased knowledge and understanding of employability readiness, Enhanced problem-solving and decision-making skills, Enhanced research and analysis abilities.
,Improved collaboration and teamwork skills through project participation.
Acquired an understanding of the relationship between skills and employability.

PS-I Project Title: Employability readiness tool

Short Summary of work done: During my internship at Crossbar Talent, I focused on problem-solving, planning, professional ethics, teamwork, critical thinking, and personal growth. I tackled various challenges, honed my decision-making skills, and learned the importance of integrity and accountability. Working collaboratively with diverse colleagues, I developed effective communication and teamwork abilities. This experience propelled my professional journey and clarified my career goals, setting a solid foundation for future endeavors.

Objectives of the project: Create an employability readiness tool for empowering professionals

Tool used: MS Excel, MS Word, Typeform

Details of Papers/patents:NA

Brief description of the working environment: The work environment at Crossbar Talent was exceptional, providing a perfect balance between productivity and personal well-being. The company emphasized creating a positive atmosphere that fostered both professional growth and work-life balance. I found myself surrounded by supportive colleagues and mentors who encouraged open communication and collaboration, making it an enjoyable place to work.

One of the most significant advantages of working at Crossbar Talent was the emphasis on maintaining a healthy work-life balance. The company recognized the importance of employees' personal lives and actively supported their well-being. This allowed me to manage my work responsibilities effectively while having time for personal pursuits and maintaining a sense of fulfillment outside of work.

What impressed me the most was how closely the company's expectations aligned with my own vision for my professional journey. The company's values and goals resonated with my aspirations, and the projects I worked on were both challenging and rewarding. This alignment created a sense of purpose and motivation, driving me to excel in my role and contribute to the company's success.

In summary, the work environment at Crossbar Talent provided a positive, supportive, and balanced atmosphere, promoting both personal and professional growth. The company's vision and expectations were in harmony with my own, creating a fulfilling and satisfying internship experience.

PS-I Project Title: Employability Readiness Tool

Short Summary of work done: Firstly, we were all assigned a criteria, I was assigned digital skills and all of us populated about 15 parameters and a list of 25-30 questions for each parameter. After that, we researched on company CIBIL scores after which we started working as a team and started forming our base. We assigned a priority index shortly after along with weightages, and a threshold level. Once this was done, we looked for an interface that was flexible enough to add our various parameters and found typeform. With typeform, we were finally able to create a tool that asseses one's employability successfully.

Objectives of the project: Develop a tool that aims to extend the scope of employability.

Tool used: Typeform

Details of Papers/patents:-

Brief description of the working environment: I know now how we can be assessed and valued by a lot of skills that I never thought were important enough. We got to work as an employee while simultaneously seeing everyhing from an employer's point of view which was a novel experience.

Academic courses relevant to the project: -

Learning Outcome: I gained quite a comprehensive understanding of the various new technologies and also realised how important it is to know what aspect of knowledge you're lacking.

PS-I station: Crossbar Talent - ESG Capability Build , Gurugram

Student

Student Write-up:

PS-I Project Title: ESG Capability Build

Short Summary of work done: Develop Comprehensive ESG Training Content: Create engaging and informative training materials that cover key concepts, principles, and best

practices related to Environmental, Social, and Governance (ESG) factors. Conduct Extensive Research on Existing ESG Tools: Explore and analyze the current landscape of ESG tools, frameworks, and methodologies available in the market. Evaluate their effectiveness, limitations, and applicability to different industries and contexts. Identify and Evaluate Relevant ESG Data Sources: Research and compile a list of reliable and comprehensive sources of ESG data, such as databases, reports, and indices. Assess their credibility, data quality, and relevance to support ESG analysis and decision-making. Create an ESG Calculator: Design and develop an interactive ESG calculator or tool that allows users to assess and measure the environmental, social, and governance performance of companies or investments. The calculator should provide meaningful metrics, benchmarks, and visualizations to facilitate informed decision-making. Ensure Alignment with Industry Standards: Ensure that the ESG training content, research findings, and calculator adhere to recognized industry standards, guidelines, and frameworks, such as the Global Reporting Initiative (GRI), Sustainability Accounting Standards Board (SASB), or Task Force on Climate-related Financial Disclosures (TCFD). Promote Accessibility and User-Friendliness: Ensure that the training content and ESG calculator are accessible to a wide range of users, including individuals with varying levels of ESG knowledge and expertise. Design user-friendly interfaces, provide clear instructions, and incorporate interactive features to enhance user engagement and understanding.

Objectives of the project: Develop an engaging ESG training program to educate participants on key sustainability concepts and responsible business practices. Conduct extensive research to evaluate and analyze existing ESG tools, frameworks, and methodologies for their applicability and effectiveness. Design and build an interactive ESG calculator that enables users to assess and measure the ESG performance of companies or investments, facilitating informed decision-making for sustainable and responsible investing.

Tool used: Excel, Python, VSCode, HTML, CSS, Express.js, Node.js, Django

Details of Papers/patents: Website Name: GoodCorp ESG Calculator
Overview: GoodCorp ESG Calculator is a user-friendly web-based tool designed to assess and calculate the Environmental, Social, and Governance (ESG) performance of companies. The website aims to provide actionable in

Brief description of the working environment: During PS-I, I was excited to work in a dynamic and collaborative environment where I gained hands-on experience in my chosen field. I understood that the company expected me to be proactive, eager to learn and contribute to various projects. As an intern, I felt valued as a part of the team, and I was enthusiastic about taking on challenges and learning from experienced professionals.
Throughout the internship, I fully immersed myself in real-world tasks and interacted with my colleagues to enhance my understanding and skill set. I was open to seeking guidance and asking questions whenever needed to make the most of that opportunity for growth.

During PS-I, I had the opportunity to learn from seasoned experts, gain exposure to the industry's best practices, and explore different aspects of my field. I received constructive feedback on my work, which helped me refine my abilities and become more proficient in my role.
Beyond technical knowledge, the experience during PS-I also fostered personal development, strengthened my communication skills, and enhanced my ability to work in a team. Networking with colleagues and mentors was essential as it opened doors to potential future collaborations or job opportunities.
Overall, PS-I offered a rich and rewarding experience, allowing me to apply academic knowledge to real-world scenarios, develop practical skills, and build a strong foundation for my future career. I embraced the challenges and opportunities for growth and made the most out of that transformative learning journey.

Academic courses relevant to the project: Fundamentals of Finance and Accounting, Computer Programming, TRW

Learning Outcome: ESG Training Content Creation, Research on the Existing ESG Tools, and Creating an
ESG Calculator

PS-I Project Title: ESG Capability Build

Short Summary of work done: Studying about various EU Reporting Frameworks, The Global Reporting Initiatives(GRI's), The Task Force on Climate-related Financial Disclosures (TCFD), The Carbon Disclosure Project (CDP), UN Principles for Responsible Investment (PRI). Studying the various models of ESG tools and ESG Calculators around us. Implementing the insights of research for building a working ESG Tool. Developing a due diligence framework for our ESG calculators and tools to practically implement our learnings

Objectives of the project: :ESG Training Content Creation,Creating ESG Calculators, Developing ESG Due Diligence Framework,Developing ESG Program Management Framework

Tool used: NodeJs,Express,MongoDB,HTML5+CSS3, Javascript, Version control(Github)

Details of Papers/patents: None

Brief description of the working environment: Crossbar offers remote type internship experience. The company mentor takes meeting with frequency of once in a week or two and most of the work delegation for upcoming weeks which i found pretty sufficient to manage. The project you get are from various different categories and you can select

them i the beginning of the term only. I found my project very innovative and the solutions I came up with caters many real-life industrial problems in the domain. There are a lot of learnings if you are willing to spend your time in the right direction and want to explore all the oppurtunities that comes along with this program very kindly offered to all the student of BITS.

Academic courses relevant to the project: Object oriented programming, Database management systems, Software Engineering

Learning Outcome: I already knowledge of tech stack used in web development but never implemented it anywhere. With PS1 project , I got to develop the UI/UX of ESG Calculator which indeed helped me understanding the real-time implementation and use cases of various tools and frameworks being used various industries.

Student

Name: RAIIA SINGH (2021AAPS0278G)

Student Write-up:

PS-I Project Title: ESG Capability Build - ESG Ratings Content Creation and ESG Calculators

Short Summary of work done: My study of ESG ratings and calculators was covered in two phases – the first was to create an extensive PowerPoint presentation on five major rating companies – MSCI, Bloomberg, S&P DJI, JUST Capital and Refinitiv. It entailed thorough research, data mining and consultation of various ESG documentation, in order to draft a report on each of their reporting frameworks and methodologies. The next was a compilation of existing ESG tools – calculators, data quality tools, documentation, ratings etc., in order for us to form a framework for our own ESG Tool, which would ideally combine the best of all of them. This phase was allotted to a group of five of us, and we collectively created a tool called GoodCorp, an innovative and unbiased ESG calculator, which offers a baseline for absolute comparison. Its unique technology features a tailored subjective questionnaire, a scoring method based on companies' performance relative to their competitors and a verification system to filter inconsistencies in reporting, providing the most transparent ranking system – a raw score out of 100. NodeJS, ExpressJS and Embedded Javascript were the languages employed to create the website. I personally

came up with the outline, curated the questionnaire having researched acceptable threshold values for each parameter, used HTML, CSS and JavaScript to add animations and graphics and improve the UI of the website, wrote the content for the landing page and came up with ways to use AI to increase its accuracy and elevate it to a high-end commercial model.

Objectives of the project: ESG Training Content Creation: Compiling a comprehensive report on the detailed methodologies of five major ESG rating companies: MSCI, Bloomberg, S&P Dow Jones Indices, Refinitiv and JUST Capital. Creating ESG Calculators: Data mining to create a database of existing ESG Tools, to be used as a model for our own prototype - GoodCorp, that offers an assessment of all aspects of a company's ESG performance in on place.

Tool used: JavaScript, NodeJS, ExpressJS, HTML, CSS, Visual Studio Code text editor

Details of Papers/patents: GoodCorp ESG Calculator
ESG evaluation is crucial for companies to ensure long-term sustainability, meet stakeholder expectations, and enhance financial performance. By assessing environmental impact, social responsibility, and governance practices, comp

Brief description of the working environment: Since my internship was conducted online, it was very flexible, which was a huge advantage as flexible hours allow us to maximise our productivity and deliver the best possible output, while allowing us to upskill and develop in other areas as well. The company mentor was very encouraging, while giving us valuable feedback on how to improve. He addressed all our doubts effectively. Our BITS faculty member, Dr. Woormileela Sinha was very helpful and understanding and kept a close eye on our progress throughout, offering us constant support and access to any resources we might need. I wish there were more teachers like her at BITS, especially in my branch, because her attitude truly kept me motivated to put my very best into the program. My only recommendation for the company would be to monitor our progress more closely, because in the second half of the program, during which we were building the ESG Calculator, we made steady progress on our own, but the meetings were very scarce and there was no one to report to on a regular basis. However, our mentor continued to communicate via email during this time.

Academic courses relevant to the project: None

Learning Outcome: Gained a comprehensive understanding of ESG reporting frameworks, ratings and rating methodologies, regulations and risks; acquired software skills in web development such as HTML, CSS, JavaScript, React and NodeJS and applied them to build an ESG Calculator that takes an input from the user in a questionnaire form, stores the resources in a database and uses an algorithm to attribute scores and weightages, and calculate the final ESG score after normalizing the parameters and taking the average of the three individual scores - E, S and G.

Student Write-up:

PS-I Project Title: ESG-Capability Build

Short Summary of work done: Understanding ESG principles is vital in today's business landscape, as it emphasizes sustainable practices and responsible decision-making. By familiarizing oneself with ESG principles, professionals gain insights into the connection between financial performance and non-financial factors. Practical application of ESG analysis involves evaluating companies and investments from a sustainability perspective. This entails assessing their environmental impact, social practices, and corporate governance. Integrating ESG analysis into decision-making enables individuals to align their investments with their values and contribute to a sustainable future. Addressing ESG challenges requires multidisciplinary collaboration. Professionals from finance, environmental sciences, social sciences, and governance must work together to

develop innovative solutions. Combining diverse perspectives enables the identification of holistic approaches to sustainability. Improved data analysis and research skills are essential for meaningful ESG assessments. Professionals need to collect, analyze, and interpret relevant data to understand ESG performance. Proficiency in data analysis facilitates informed decision-making and identification of emerging trends and risks. Increasing awareness of sustainability challenges and opportunities empowers professionals to drive positive change. By staying informed about environmental and social issues, individuals can identify opportunities for sustainable innovation and address potential risks. Familiarity with ESG reporting frameworks and standards ensures adherence to best practices in ESG reporting. Ethical considerations and responsible business practices are essential for integrating ESG principles. Enhanced stakeholder engagement and communication skills foster effective ESG implementation. Understanding regulatory and compliance requirements is crucial for navigating ESG landscapes. Finally, the ability to make informed decisions by integrating ESG factors is a key outcome of developing proficiency in ESG principles and practices.

Objectives of the project: Overall, this comprehensive training program covers essential aspects of ESG training content creation, calculator development, and due diligence framework implementation, equipping participants with the necessary skills and knowledge to navigate the ESG landscape effectively.

Tool used: Testing Frameworks: Testing frameworks like JUnit for Java, pytest for Python,

Details of Papers/patents:none

Brief description of the working environment: Everything was upto Mark.

Academic courses relevant to the project: CS F111 - Computer Programming

Learning Outcome: Overall, the learning outcomes of this program encompass a solid understanding of ESG principles, practical content creation skills, proficiency in calculator development, and the ability to implement and pilot an ESG due diligence framework. Participants will be well-equipped to navigate the ESG landscape, promote sustainable practices, and drive positive impact in their respective organizations.

PS-I Project Title: Metaverse Project Using JavaScript

Short Summary of work done: The Metaverse department of Crossbar Talent is focused on exploring the various possibilities of this newly growing domain. We were designated with the responsibility of developing a block chain -based application using for the trade of virtual land. This project provides an interface for users to buy and trade virtual land hosted on a decentralized server-block-chain using Non-Fungible Tokens or NFTs This project should achieve a fully functional metaverse platform where users can explore various virtual environments and interact with each other among other activities they could engage in. Each land parcel, valued by NFTs, would contain unique attributes, meta data as well as ownership records which would be stored within the blockchain. The project involves the creation of a decentralized marketplace facilitating users to list their land plot for sale, set prices, and engage in peer-to-peer transactions using NFT tokens.Wallet integration with popular cryptocurrency would also be developed using technologies such as solidity, enabling users to manage their NFTs, conducts purchases and initiate transactions within the Metaverse Platform.

Objectives of the project: To create a website for virtual land trade

Tool used: Html, javascript, css, solidity

Details of Papers/patents: None

Brief description of the working environment: Crossbar talent works towards redefining and reimagining the Talent Management
process by creating an agile, modular ecosystem of systematically attracting, identifying, assessing, developing, and enhancing employability & sustainability of candidates across levels.
Crossbar Talent aims to bridge the everlasting gap between skills and employability by finding, training, mentoring and up-skilling job seekers as well as experienced professionals, hence creating a talent pool of 'readily deployable resources. This made the environment created by crossbar talent very conducive to learning.

Academic courses relevant to the project: None

Learning Outcome: Html, css, Threejs, solidity

PS-I station: Crossbar Talent - Metaverse Training POC , Gurugram

Student

Student Write-up:

PS-I Project Title: Creation of a metaverse project using Javascript to buy and trade virtual land using NFT tokens.

Short Summary of work done: Throughout this project, our team set out to create a virtual land marketplace in the metaverse, leveraging blockchain technology and NFTs for transactions. As a novice in this field, I initially faced challenges understanding web development essentials such as HTML, CSS, and JavaScript. Following a well-planned weekly approach, we designed a sleek user interface using Bootstrap, allowing us to focus on critical aspects. To enhance the user experience, I explored Three.js, constructing a 3D environment and showcasing a basic car model. The crux of the project was integrating blockchain infrastructure. By studying Solidity, I developed smart contracts enabling secure ownership and trading of virtual land parcels. Connecting the platform with MetaMask wallets allowed seamless transactions using NFTs/Crypto. Throughout the project, our team held regular meetings to synchronize progress. My role involved frontend design, emphasizing smooth integration with the NFT/Crypto wallet. In the final week, we successfully achieved our objectives, presenting a fully functional virtual land marketplace MVP. This project significantly honed my web development, blockchain, and Three.js skills while fostering effective teamwork. In summary, this endeavor offered valuable learning outcomes, enhancing my understanding of web development, blockchain technology, and the potential of the metaverse. I am excited to explore further advancements and contribute to this dynamic landscape in the future.

Objectives of the project: Creation of a dynamic virtual land marketplace in the metaverse that leverages the power of Three.js, NFTs, and smart contracts and then integrating these cutting-edge technologies to establish a robust ecosystem where users can engage in buying, selling, and owning virtual land assets with enhanced security, transparency, and creative freedom.

Tool used: Visual Studio Code (Code Editor) MetaMask Wallet (Blockchain Interaction) Solidity Compiler (Smart Contract Deployment) Three.js (3D Modeling) Bootstrap (UI Design) GitHub (Version Control) Netlify (Project Deployment)

Details of Papers/patents: Not any

Brief description of the working environment: During this project, the working environment was primarily remote, allowing for flexible and collaborative work from home. The company expected us to take ownership of our individual tasks while maintaining effective communication and coordination through online platforms. Regular team

meetings were conducted to monitor progress and address any challenges. The internship provided a valuable learning experience, exposing us to cutting-edge technologies such as blockchain, NFTs, and smart contracts. Working on the virtual land marketplace project allowed us to delve into web development, UI/UX design, and integrating real-world use cases with blockchain technology. Throughout the Professional Semester I (PS-I), we honed our technical skills, problem-solving abilities, and time management. The remote setup taught us self-discipline and adaptability, crucial traits in a dynamic work environment. Engaging with a multidisciplinary team broadened our perspective and fostered collaboration, preparing us for future real-world projects. Overall, the online experience proved to be enriching, empowering us to contribute effectively, grow as professionals, and deliver tangible results in a remote work setting. We are grateful for the opportunity to learn and apply our knowledge to real-world challenges, and we look forward to building on this experience in future endeavors.

Academic courses relevant to the project: not any

Learning Outcome:
This project enabled me to learn web development, blockchain/NFT integration, Three.js, and project collaboration while creating a virtual land marketplace MVP. Valuable skills gained for future projects.

Objectives of the project: Develop an app to help the common man understand how the government works and its inner details

Tool used: Word, excel, Power point, glide, canva and Figma

Details of Papers/patents:NA

Brief description of the working environment: I had the chance to work under the sub collector of Tirupur to understand how the government works at a local level. Our ps-1 mentor who works in the revenue departments showed us how government finances projects (such as roads, schemes that help the poor and etc.) . This experience gave me important new perspectives on the complex nature of different administrative processes, and help me connect to the society and understand their problems and find solutions to improve their standard of living.

Academic courses relevant to the project: Fundamentals of Finance and Accounting, Principles of Management

Learning Outcome: Insights into inner workings of the government, public policy, schemes and effective means of analysing data

Student Write-up:

PS-I Project Title: With the gov

Short Summary of work done: Along with a few other students, I conducted surveys on local tribals and their problems and tried to come up with measures to help them. We also worked on an app 'With the Gov' which is aimed at simplifying the workings of the government so that the common public understands. This gave me a good amount of exposure to how society is administered and how it can be made more effective and efficient. We also did case studies on the main departments under Government of Tamil Nadu.

Objectives of the project: Develop an app to help the comman man understand how the government works and it's inner details.

Tool used: Word, Excel, PowerPoint, Canva, Figma, DaVinci Resolve

Details of Papers/patents:NA

Brief description of the working environment: I had the chance to put myself in an active work environment centered on management and scheme understanding during a two-month internship at the Sub Collector Office. This experience gave me important new perspectives on the complex nature of administrative procedures and the implementation of different schemes designed to boost societal development.

Academic courses relevant to the project: Principle of Management

Learning Outcome: Insights into inner workings of the government, public policy, schemes and effective means of analysing data.

PS-I Project Title: Impact of Generative AI on Consulting

Short Summary of work done: Worked on the impact of Gen AI in consulting, then in various service lines in the company, and eventually on potential use-cases in the chemical industry and how to integrate genAI in a manner that creates profit while also ensuring employee and client satisfaction, as well as the right balance. Came up with use-cases and modules on how to integrate it in various stages of the value chain of the company as well.

Objectives of the project: To understand Generative AI as well as major consulting firms, then to come up with potential usecases of Generative AI in consulting and how to integrate them at to ensure maximum output and profit.

Tool used: Open Source research engines

Details of Papers/patents:-

Brief description of the working environment: The working environment was very professional, the projects were engaging and we were exposed to the consulting world and it was fascinating to see the workings of such a huge organisation and to be able to

contribute to it. The projects were also very relevant to the new and upcoming technology and it was interesting to see how industries tackle such new technologies while still maintaining their level and quality of output.
Overall had a great experience.

Academic courses relevant to the project: Principles of Economics, Technical Report Writing

Learning Outcome: 1. Learnt how to perform in a team setting, and how to ask for guidance and when to take initiative.
2. Learnt about generative AI as an upcoming technology and its impact on various industries, both quantitative and qualitative.

Student Write-up:

PS-I Project Title: Generative AI & It's Impact on Management Consulting

Short Summary of work done: During my internship at EY, I had the opportunity to delve into the corporate world, build industry connections, and apply the theoretical knowledge I had acquired. A significant aspect of my internship involved conducting an impact assessment of generative AI, specifically focusing on its applications in consulting. I thoroughly examined GDS SaT (Generative Design Systems for Strategic Advisory and Transformation), which utilizes generative AI algorithms to provide high-level overviews and analysis of business strategies. Through this assessment, I gained valuable insights into how generative AI can revolutionize the consulting field by generating innovative solutions and optimizing decision-making processes. In addition to my research, I actively engaged in networking events and connected with professionals in the industry. By attending conferences, seminars, and workshops, I expanded my professional network and learned from experienced individuals who shared their expertise in the field. These connections not only provided me with valuable insights but also facilitated the exchange of ideas and perspectives. Furthermore, I had the opportunity to showcase my findings and present my research through presentations and reports. I highlighted the potential dollar figures that generative AI can bring to consulting firms by improving efficiency,

reducing costs, and enhancing customer satisfaction. These presentations allowed me to refine my communication skills, articulate complex concepts, and receive feedback from industry professionals. Throughout my internship, I had the chance to bridge the gap between theory and practice. By working on real-world projects, I applied the knowledge I had gained in a practical setting and gained a deeper understanding of how theories are implemented, adapted, and optimized to address complex business challenges. Overall, my internship at EY provided me with a comprehensive experience in the corporate world, building industry connections, conducting an impact assessment of generative AI, creating dollar figures, connecting with people, and making presentations. It was a rewarding opportunity that expanded my knowledge, sharpened my skills, and prepared me for a successful career in the consulting industry.

Objectives of the project: The objectives of our project during our internship at EY were multi-faceted and aligned with the exploration of the corporate world, building industry connections, and understanding the practical applications of the theory we had learned. Firstly, we aimed to gain a deep understanding of the inner workings of the corporate world by immersing ourselves in a professional environment and actively participating in project-based activities. This allowed us to observe firsthand how organizations operate, collaborate, and make strategic decisions. Secondly, we recognized the importance of building industry connections and sought to establish relationships with professionals in the field. Through networking events, meetings, and collaboration with colleagues, we aimed to expand our professional network and learn from experienced individuals who could offer valuable insights and guidance. Finally, we sought to bridge the gap between theoretical knowledge and its practical applications. By working on real-world projects and applying the concepts we had learned in a practical setting, we enhanced our understanding of how theories are implemented, adapted, and optimized to address complex business challenges.

Tool used: During my internship at EY, I utilized tools such as Python, R, TensorFlow, and PyTorch for data analysis and generative AI model development. I also leveraged Alteryx for data preparation and Power BI for visualizing research findings. With Alteryx, I s

Details of Papers/patents:-N/A-

Brief description of the working environment: The working environment at EY during my internship was characterized by a dynamic and welcoming atmosphere. As an intern commuting daily from Faridabad to the EY GDS Gurgaon office in DLF Cyberpark, I experienced firsthand the bustling corporate environment. EY, a globally recognized professional services firm, upheld high expectations from its interns, encouraging active engagement in projects, taking ownership of work, and delivering results aligned with the company's standards of excellence.
The company provided a supportive infrastructure to facilitate our work. I was equipped with the necessary IT assets, including laptops and other resources, to effectively contribute to the team's objectives. This enabled a seamless and efficient workflow. The working environment itself was great, with friendly and knowledgeable professionals who

fostered a culture of collaboration. I had the opportunity to collaborate with individuals from diverse backgrounds who were always willing to share their expertise and support my learning and growth.
Throughout the internship, I had access to a wealth of EY resources and information available on the internet. This allowed me to familiarize myself with the firm's methodologies, industry insights, and thought leadership. By leveraging these resources, I gained a broader understanding of EY's approach to consulting and its position as a leader in the professional services industry.
In conclusion, my internship at EY provided me with a dynamic working environment where I experienced the vibrancy of the corporate world. The company's high expectations, coupled with the support and resources provided, enabled me to learn and grow both personally and professionally. The friendly and collaborative nature of the people at EY, along with the exposure to their extensive knowledge and resources, made my internship a transformative experience.

Academic courses relevant to the project: Probability and Statistics, Funda of Fin & Acc, Technical Report Writing

Learning Outcome: During our internship, we gained valuable insights into various aspects of the consulting industry and the impact of generative AI. We learned about the role of GDS SaT, which stands for Generative Design Systems for Strategic Advisory and Transformation, in providing high-level overviews and analysis of business strategies. This technology has revolutionized the consulting field by leveraging generative AI algorithms to generate innovative solutions and optimize decision-making processes. Additionally, we explored the impact of generative AI on TSE (Technical Support Engineer) and TRS (Technical Relationship Specialist) roles. We delved into the explicit details of TSE/TRS responsibilities and identified numerous use cases where generative AI can be applied, such as automating technical issue resolution, enhancing customer support, and streamlining relationship management. By assessing the potential of these use cases, we evaluated how generative AI can positively impact the consulting practice by improving efficiency, reducing costs, and enhancing customer satisfaction. Overall, our internship provided us with a comprehensive understanding of the capabilities of generative AI and its potential to transform the consulting industry.

Student Write-up:

PS-I Project Title: Impact of Generative AI on Consulting

Short Summary of work done: During my internship at EY, I assessed the impact of Generative AI on consulting, with a focus on Turnaround & Restructuring Strategy and Transaction Strategy & Execution. I conducted a high-level analysis to understand how integrating AI could enhance consulting services, leading to improved efficiency and outcomes for clients. Delving deeper into specific sub-competencies, I extensively examined the potential effects of Generative AI on Turnaround & Restructuring Strategy and Transaction Strategy & Execution, gaining insights into addressing unique challenges and adding value for clients. I compiled a detailed document outlining time allocation for each professional solution (Sell and Separate, Buy & Integrate, and Reshaping Results). The document highlighted task-specific time and engagement levels (Senior/Partner/Manager), while also evaluating the potential automation percentage with Generative AI, streamlining resource allocation and processes. In addition to impact analysis, I actively developed a framework for a Generative AI model to facilitate transaction origination. The AI model was designed to identify and assess potential transaction opportunities, empowering clients to make informed and strategic decisions. Throughout the internship, collaboration with EY professionals enabled data analysis and implementation of the AI framework. The results showcased Generative AI's power as a valuable tool in consulting, enhancing overall performance and providing clients with cutting-edge solutions.

Objectives of the project: High Level impact analysis of Generative AI, Extending impact analysis to TSE/TRS

Tool used: Powerpoint, Excel, PDF, ChatGPT

Details of Papers/patents:NA

Brief description of the working environment: During my internship at EY, I experienced a work culture that prioritized professional excellence and personal growth. From day one, the emphasis on collaboration was evident as I was treated as a valued team member. My ideas and contributions were encouraged and respected.
Mentorship and learning were integral to the experience. I had a dedicated mentor who guided me through projects, and the open-door policy allowed me to seek advice from any team member, fostering camaraderie and accelerating my learning.
Diversity and inclusion were celebrated, creating an enriching environment. EY embraced different perspectives, leading to innovative solutions and a dynamic atmosphere.
Work-life balance was commendable. Despite demanding projects, the company encouraged breaks and wellness. Team-building activities and social events promoted a healthy balance.
Integrity and ethics were paramount. EY's dedication to transparency and trustworthiness with clients and employees left a lasting impression.

My internship at EY was transformative, revealing a work culture that nurtures growth, collaboration, and inclusivity. It reinforced my career aspirations and highlighted the importance of diversity, ethics, and continuous learning.

PS-I Project Title: Assessing the Impact of Automation and Generative AI on Strategy Consulting at EY Parthenon

Short Summary of work done: I met the team members at EY Parthenon Strategy Team. I understood what various sector teams like AMM, Energy, Healthcare, FS, TMT, TRS etc. do. Further I understood what are the type of projects that they work on- Commercial Due Diligence and Strategy projects. I deeply understood and listed down various core workstreams in a typical client engagement project. Then I understood the Real Value Proposition of Generative AI and its use-cases in depth across various industries like Healthcare, Finance etc. I also understood the growing dollar value investments by PE/VC in AI companies and what other consulting firms like Accenture, McKinsey, Bain, BCG are doing in this space. Then I did an in-depth analysis of some of the existing solutions in the market that EY could potentially leverage from- Semantic Search, Financial LLMs by Bloomberg, Cohere Solutions for bespoke use cases. It was based on Stanford HeLM benchmarking. As a final step I combined what Gen AI and automation have to offer and mapped it to the requirements of Strategy Consulting at EYP and did preliminary as well as an in-depth impact assessment across core workstreams.

Objectives of the project: Finding new revenue streams, potential cost-saving targets.

Tool used: Power BI, Powerpoint, Excel, Alteryx

Details of Papers/patents:NA

Brief description of the working environment: The working environment at EY GDS was very professional and dynamic. The firm has an open culture and fosters creative and out-of-the-box thinking among its employees. There were no fixed working hours and cubicles like in a typical corporate setup. Instead there were various open and collaborative workspaces where we could interact with the employees, build meaningful connections and learn from them. We were expected to go through mandatory training

sessions on PowerBI and Alteryx and some useful finance lessons to complete the onboarding process. We were provided with IT assets and quickly assigned our mentors/managers with whom we had worked for the duration of our internship following strict deadlines. We were also asked to present our findings to the C-suite management at EY GDS on a regular basis.

Academic courses relevant to the project: Fundamentals of Finance and Accounting

Learning Outcome: 1. What is EY Parthenon? What does strategy team at EYP do?
2. Meeting the team members, understanding what various sector teams do, kind and scope of projects, timelines, etc.
3. Learning about LLM architecture, fine-tuning, reinforcement learning and prompt engineering.
4. Deploying LLMs for bespoke use cases
5. Doing an impact assessment across core workstreams at EYP Strategy. Analysing what could be new revenue streams due to Gen AI.

PS-I Project Title: Impact of Generative AI on consulting

Short Summary of work done: The project's requirements included identifying use cases of Generative AI in the field of consulting and steps to implement it to reduce human intervention and increase efficiency, which is essential for any organization as a cost-reducing strategy. I connected with people in the organisation within the competency alloted, and learnt about their field of work and how generative AI will potentially aid them in their work. Also learnt about the current developments around the world in the field of AI and how tech giants such as Google, Microsoft, IBM, OpenAI are providing AI services in form of APIs. To better understand how AI models work, I understood the main differences between conventional AI and Generative AI and then further delved into the details of how ML and DL models are trained, validated, tested and fine-tuned in order to serve the purpose of their creation, with great accuracy. I had regular interaction with my

mentor and they ensured that we always had a lead about the objectives to be completed and that the work was completed successfully.

Objectives of the project: Identifying the use cases of Generative AI and its potential impact

Tool used: Excel, PowerPoint, PowerBI, Alteryx, CapitalIQ

Details of Papers/patents: None

Brief description of the working environment: The company had a wonderful working environment with supportive and friendly people. We could openly ask anyone about their field of work and connect with them in general and they would be happy to talk to us. My mentor was extremely helpful at all times and resolved all our queries. They even helped us connect to their colleagues through which we made more connections and got to know better about work that goes into a corporate environment. Not only the people in the competency in which we worked in but also the leadership at EY was extremely supportive to us and made ensured a smooth working experience for us. The major learnings include getting to know about Generative AI, its benefits and its use cases, various AI tools available to increase efficiency and current developments in this field.

Academic courses relevant to the project: Fundamentals of Finance and Accounting, Principles of Economics, Principles of Management

Learning Outcome: Learnt about the benefits of generative AI as well as how AI models are made. Also came to know about the current developments and AI tools used around the world for different tasks.

Student Write-up:

PS-I Project Title: Impact of Generative AI on consulting

Short Summary of work done: I engaged in various activities that deepened my understanding of AI models, deep learning, and the fundamentals of generative AI. One of the key activities involved learning about the training process of AI models and the different types of models used in the field. This knowledge provided me with insights into how generative AI models can be developed and optimized. I actively sought out interactions with team members from the Transaction Diligence (TCF) team. By spending time with them, I aimed to grasp the minute details of the transaction diligence process. These discussions allowed me to gain a comprehensive understanding of the existing tools and methodologies used within EY. By comparing these existing tools with the potential of generative AI, I was able to identify areas where generative AI could offer superior solutions. This analysis involved considering the specific requirements of the TCF team and assessing how generative AI could streamline processes, enhance accuracy, and potentially reduce the time required for transaction diligence. Applying my knowledge, I was able to provide concrete examples and use cases to demonstrate the potential benefits of generative AI. By linking the concepts I learnt to the specific needs and challenges faced by the TCF team, I showcased how generative AI could address these challenges and improve their workflow.

Objectives of the project: Suggest potential areas where gen AI could be implemented and give an assesment of the % hours that will be impacted

Tool used: Automation tools

Details of Papers/patents:N/A

Brief description of the working environment: The working environment during PS-I was a dynamic and collaborative setting. As part of the project focused on assessing the impact of generative AI on transaction diligence, I engaged with the Transaction Diligence team and various stakeholders. The environment fostered open communication and encouraged knowledge sharing, allowing me to understand the minute details of the transaction diligence process and the tools used within the company.

Expectations from the company during PS-I revolved around conducting a comprehensive analysis of generative AI's potential benefits in transaction diligence. The company encouraged a proactive approach, seeking innovative solutions and practical applications to address real-world challenges.

During PS-I, I learned extensively about AI models, deep learning, and the fundamentals of generative AI through the completion of the badge. Applying this knowledge, I effectively showcased how generative AI could potentially enhance the transaction diligence process and offer superior solutions compared to existing tools.

Overall, PS-I provided a valuable opportunity to work in a collaborative and innovative environment, meeting the company's expectations by exploring the transformative power of generative AI in transaction diligence.

Academic courses relevant to the project: Financial Management, Principles of Economics, Principles of Management - some terms learnt in these courses were used in our internship.

Learning Outcome: Understood the potential of generative AI, learnt about the transaction diligence process in detail, learnt about various ai models and how they are trained and fine tuned. Lots of networking and how to behave and work in a corporate environment.

Student Write-up:

PS-I Project Title: Research on Implementing Generative AI

Short Summary of work done: Throughout the internship, I was tasked with researching advancements in AI mainly Generative AI and related technology, and understanding the work and process in all verticals in VME competency(there were 5 verticals) and presenting our findings on the potential of this technology and suggesting use cases and methods to integrate these technologies in EY. So I made a complete process map of all verticals VME and identified steps where there is scope for implementing these technologies with minimal risk and having a favorable return to cost balance and then identified methods and tools that the firm can utilise to integrate AI technologies in those steps to improve upon the quality of work and reduce the time taken per project thereby boosting productivity.

Objectives of the project: Understanding the process map of projects in Valuation, Modelling and Economics competency and finding processes for implementing Generative AI and other AI tools to improving project efficiency and quality

Tool used: S&P CapitalIQ, Microsoft Excel, Powerpoint, OpenAI GPT API, ChatGPT

Details of Papers/patents: None

Brief description of the working environment: Working at EY was first time being in a real corporate setup and it was great everyone there is very helpful and supportive. Learning is encouraged and overall the firm is very flexible in terms of work so that the employee can be at their best.
There are primarily three things I learned from my internship at EY
1. The valuation process for complex securities, M&A(Mergers and acquisition), real estate
2. The capabilities of AI and the importance of learning tools that leverage them.
3. Improved presentation and communication skills through multiple presentations and interactions with employees and Directors/Partners/Senior Managers.

Academic courses relevant to the project: Fundamentals of Finance and Accounting, Financial Management, Derivatives and Risk management, Macroeconomics, Principles of Economics, Business Communication

Learning Outcome: There are primarily three things I learned from my internship at EY apart from
1. The valuation process for complex securities, M&A(Mergers and acquisition), real estate
2. The capabilities of AI and importance of learning tools that leverage them.
3. Improved upon presentation and communication skills through multiple presentations and interaction with employees and Directors/Partners/Senior Managers.

PS-I Project Title: Impact of Generative AI on consulting

Short Summary of work done: During my PS-I, I engaged in a diverse range of projects and research activities. Firstly, I focused on studying the consulting industry and delved into the integration of Gen AI within major consulting firms. This involved examining case studies of prominent players in the industry who have successfully incorporated AI into their operations, identifying key trends, challenges, and opportunities. Additionally, I dedicated time to understanding the pursuits service line at EY. Through extensive

research and analysis, I gained insights into the team's processes and workflow. This involved studying projects undertaken by the pursuits team, examining the project lifecycle, and understanding the methodologies employed. Furthermore, I conducted open-source industry analysis of the chemical industry. This research entailed exploring various aspects of the chemical sector, such as market dynamics, competitive landscape, and emerging trends. Additionally, I focused on case studies of leading players within the chemical industry, specifically investigating how they have utilized Gen AI in their operations to drive innovation, optimize processes, and enhance decision-making. Overall, my PS-I experience allowed me to deepen my knowledge of the consulting industry, specifically in the context of Gen AI integration. I gained valuable insights into the pursuits service line at EY, developed a comprehensive understanding of the chemical industry, and examined the application of Gen AI in the sector. These experiences equipped me with a well-rounded skill set and industry knowledge to contribute effectively in future endeavors.

Objectives of the project: To see and identify the use cases of Gen AI in consulting and observing how it affects the space

Tool used: S&P Capital IQ, Alteryx, Power Bi

Details of Papers/patents: None

Brief description of the working environment: During my PS-I internship at EY, the working environment was dynamic and professional, fostering a culture of collaboration and innovation. EY is a global professional services firm, and the atmosphere was characterized by a strong emphasis on teamwork, integrity, and a commitment to delivering high-quality services to clients.

As an intern, the company had clear expectations from me. I was expected to approach tasks with enthusiasm and a willingness to learn. Diligence, attention to detail, and effective time management were crucial qualities required to thrive in the fast-paced environment. EY encouraged interns to actively engage with team members, ask questions, and seek guidance when needed. Embracing feedback and displaying a growth mindset were encouraged to foster continuous improvement.

During PS-I, my learning experience was diverse and enriching. The research on the consulting industry and Gen AI integration broadened my understanding of emerging technologies' impact on various sectors. Analyzing case studies allowed me to grasp practical applications of AI in business operations and decision-making.

Exploring the pursuits service line at EY provided valuable insights into project management and client engagement processes within a consulting context. This exposure enhanced my understanding of consulting methodologies and the importance of client satisfaction.

Conducting open-source industry analysis of the chemical sector allowed me to apply research skills and analyze complex market dynamics. Studying case studies of leading players equipped me with real-world examples of how Gen AI can drive innovation and success in the chemical industry.

Overall, my internship at EY provided me with a holistic learning experience, strengthening both my technical skills and soft skills while exposing me to the corporate culture of a reputable professional services firm.

Academic courses relevant to the project: Finance Minor courses

Learning Outcome: Gained many soft skills including teamwork, time management, problem solving, web scrapping and many hard skills including S&P Capital IQ, Python, and some finance concepts

PS-I Project Title: Website upgradation and design

Short Summary of work done: We figured out and noted down the points of improvements to be done to the farmers pride website after analysing it with other similar websites and submitted our suggestions to the company.We started with the ideation of the website and the design as given by our mentor Mr. Rovin Pushp. Then we started learning with the necessary technology and languages needed to implement the design and moreover learned GitHub to work together on a code and thus collaborate. We divided the work to be done amongst ourselves and started working on our part as the internship proceeded. After the design of the website was done for desktop we ensured its functionality and optimisation for smaller devices as well to make it fully responsive. Finally we gathered all the components and merged then to make a fully responsive, static website.

Objectives of the project: To make a fully responsive frontend website from scratch for the awareness program named Vihatha and to upgrade the already made website of Farmers pride

Tool used: Languages used - HTML, CSS , JAVASCRIPT, REACT

Details of Papers/patents:-

Brief description of the working environment: The PS Division and Farmers Pride provided us with a great opportunity to learn and work during our summer.
It provided with a healthy work environment to learn and grow and to be acquainted with all the necessary technology for similar roles in the industry.
We collaborated and worked simultaneously, while being mentored by the Industry experts.
Overall it was a great learning experience for us and we extend gratitude to PS Division and Farmers Pride

Academic courses relevant to the project: Computer Programming

Learning Outcome: 1. Learnt to collaborate and work together to code a website from scratch

2. Learnt to resolve bugs and improve the design of website
3. Learned GitHub, Html, CSS, Javascript, React.
4. To give formal presentations of the work done and to make reports for the same.

PS-I station: Farmers Pride , Bilaspur

Student

Student Write-up:

PS-I Project Title: Website development and upgradation

Short Summary of work done: Did a comparative analysis of Farmer's pride website with other similar websites and listed out the pros and cons of both. Suggested improvements that can be done on the website on basis of our analysis. We then started creating a new website for their initiative Vihatha. First, we learned languages necessary for creating the website. After the learning phase we started creating on individual webpages on our GitHub branches and then decided to merge all webpages at the end to create the final website. Between this process, we had several meets with our mentors in order to improve the overall layout of the website as per their likings and suggestions. This way, we managed to create our website in a very efficient way.

Objectives of the project: To give suggestions for their primary website which is Farmer's pride and also to create a completely new website for their intiative Vihatha.

Tool used: HTML, CSS, JavaScript, React, Bootstrap, Material UI, Github, VS code

Details of Papers/patents: We primarily created a website, so no papers/patents as such.

Brief description of the working environment: The working environment was great. Since the start, the mentors were very supportive and helped us whenever we were facing any trouble. Initially, the whole process felt a bit slow and we felt like we weren't doing enough work, but later Rovin sir helped us in making a proper plan and then we executed it to the best way possible. Learned a lot of things both technical and in general, including the importance of right mentorship, collaborative teamwork and many such things.

Academic courses relevant to the project: Having CS as my major, learning all the new languages opened a new field for me personally and also strengthened my basic concepts of CS which will help me in many Computer science courses in upcoming semesters.

Learning Outcome: Learned different languages such as HTML, CSS, JavaScript and React. More importantly learnt collaborative work, working within deadlines and improving your work on the basis of suggestions given by your mentor.

Name: KAVYA M D (2021A1PS2283G)

Student Write-up:

PS-I Project Title: consultancy

Short Summary of work done: over the course of my PS1, I had the opputtunity to work on over 10 projects and

Objectives of the project: Depending on their ask, find required details and present them to the client.

Tool used: google slides, docs, MS Excel

Details of Papers/patents:-

Brief description of the working environment: the working environment was friendly and ecouraging and the team was always there to guide me through each project and help me overcome any hurdles i faced. In my experince, the company expected good work ethics, accountability and timely delivery of the required deliverables due to the nature of the work and the time constraints posed by the clients. I learnt to handle a coorporate environment and the responsinilities handed to me, which also involved learning to work under pressure and being efficient enough to finish multiple projects within short durations.

Academic courses relevant to the project: FUFA

Learning Outcome: How to collect and analyse data to extract useful information and deliver the data to the client using presentations.

PS-I station: Feedback Advisory Services Pvt. Ltd. , Bengaluru

Student

Name: KUSUMITA PAL . (2021A1PS3053H)

Student Write-up:

PS-I Project Title: Market Research

Short Summary of work done: My work was based on secondary market research. I had to collect data from reliable secondary resources such as government websites, reports, online databases or newspaper articles. After data collection, I had to analyze the data and present the data by making ppts. All projects I worked on, I had to do this work.

Objectives of the project: Secondary Research

Tool used: Excel, Powerpoint

Details of Papers/patents:NA

Brief description of the working environment: Working environment-
Very good experience. Mentors are very friendly and are always ready to help us with our work. Regular feedback helped me improve my work. By working on the projects, I gained a good knowledge about the topics on which I had to do research.
Learning outcome-
PS-I helped me learn how to work in an office environment and in a team. I also learned a few professional practices. I learned the basics of market research. I learned how to do secondary research efficiently and how to analyze data and write an analysis. I have improved my communication skills and my confidence has increased as well.

Academic courses relevant to the project: Management courses

Learning Outcome: I learnt the basic steps in market research. I also learnt to use Excel and Powerpoint effectively.

PS-I Project Title: Regression and Time series analysis

Short Summary of work done: The objective of this project was to analyze a dataset comprising Gold, Euro, and Silver using time series analysis and regression analysis. The project involved employing diverse techniques to decompose the time series, detect trends and seasonality, and generate forecasts for future figures. Additionally, the performance of various forecasting models was compared to assess their accuracy. The project also explored the classical linear regression model, focusing on its fundamental concepts, assumptions, least squares estimation method, and coefficient of determination. The application of this model to a real-world dataset of house prices was studied to gain valuable insights. We also embarked on an exploration of Autoregression models, specifically ARMA (Autoregressive Moving Average) and ARIMA (Autoregressive Integrated Moving Average). Our efforts were dedicated to improving the dashboard employed for the ARIMA model, optimizing its functionality and usability. As we approached the conclusion of our project, we had the opportunity to delve into the field of Principal Component Analysis (PCA) and the concept of the Schwartz Criterion. These topics exposed us to advanced techniques in data analysis and model selection, broadening our understanding of statistical methodologies.

Objectives of the project: Building and optimizing existing dashboard testing Classical linear regression model and it's assumptions, and it's integration with ARIMA model.

Tool used: MS Excel & Excel VBA

Details of Papers/patents:.

Brief description of the working environment: Our internship experience was conducted entirely online, offering the convenience of remote work. Throughout the internship, we engaged in weekly meetings held twice a week, providing an opportunity to update our progress to our assigned mentor. The working environment proved to be accommodating and allowed for flexible working hours, enabling us to strike a balance between our personal and professional commitments. However, we also encountered challenges that necessitated self-directed learning to acquire the skills and knowledge essential for successfully completing our assigned projects

Academic courses relevant to the project: Fundamentals of finance and accounting, Derivatives and risk management, Probability and Statistics and Econometrics

Learning Outcome: Collaborative Work Environment, Advanced-Data Analysis Tools, Emphasis on Continuous Learning

Name: NEK MANCHANDA . (2021A7PS0576P)

Student Write-up:

PS-I Project Title: Snapshot and Assessment of the US Economy

Short Summary of work done: The project to which I was assigned had 2 Phases - Snapshot and Assessment. In the Snapshot phase, I was tasked with gathering data on the US economy in MS Excel. I utilized the FRED Excel Add-In to get the data of 90 Economic Indicators and segregated them into 7 Economic Sectors. Following segregation, I generated Month-on-Month (MoM) and Year-on-Year (YoY) change columns for the indicators. I made an Index worksheet having a list of the indicators, their sector, source, updation frequency, and Level in the sector. I used INDEX-MATCH formulae and relative date comparisons to create 5-Year Dynamic Tables and charts for each indicator's MoM and YoY data. In the Assessment Phase, I did an analysis of the US economy using a Python program. I used the Pandas library to read and store the Snapshot workbook as DataFrames. The program took inputs from the client for the desired sector and the Month-Year value. It filtered out the LEVEL 1 Indicators of the required sector to perform individual analysis. It evaluated the indicator's MoM values at the date of interest against a calculated 3-month average. I created a change intensity mapping and sent the evaluated change through it to analyse the indicator's performance during the desired month-year and displayed its result as an opinion on the sector's performance. In the end, it added each indicator's change to produce a sector average which was mapped to produce an overall opinion to the client of the sector's performance during the requested month-year.

Objectives of the project: Organisation, Visualization and Analysis the US Economy data.

Tool used: MS Excel, Python

Details of Papers/patents:NA

Brief description of the working environment: My PS tenure was held completely in an online mode. The working hours were fully upon our convenience. Meets with the industry mentor were held twice a week normally, on Monday and Thursday, in which we gave updates on the progress made, if any, and were given tasks or improvements to be done by the next meet. Being an online internship, there were some shortcomings as well as we had meetings between 3 pm to 8 pm based on the Industry mentor's availability

and our responses to the changes. We didn't get a chance to interact with the rest of the company executives and employees but still had a fruitful experience working with a mentor who is quite experienced in the industry. The PS-1 helped to some extent in improving my communication skills. Working on one entity over a long duration with deadlines for each step was also quite a new experience.
Because of its online nature, PS-1's intended benefit was not realised to its full potential, but it did save a significant amount of time which would have been required for commuting and living alone in any other city. Overall it was quite a new and interesting experience with its own highs and lows.

Academic courses relevant to the project: Computer Programming, Principles of Economics

Learning Outcome: Gained Experience in performing Data Analysis.
Filtered and visualised data using multiple formulae in MS Excel.
Used Excel workbooks in Python program using Pandas.

PS-I station: Futures First Info Services Pvt. Ltd. , Gurugram

Student

Name: AVIRAL AGARWAL . (2021B3A71285P)

Student Write-up:

PS-I Project Title: Making a 60-40 Portfolio & Value vs Growth vs Momentum Stocks

Short Summary of work done: 1. For 60-40 Portfolio: You get data from the net of stocks and bonds and analyze their return for stocks, bonds and a portfolio with 60% stocks and 40% binds and see their historical growth. 2. Value s Growth Stocks: You get the data from the net and use find the pb ratio and other financial ratios to segregate stocks into growth, value, momentum or quality stocks and then get the historical growth then see which investing strategy has best returns.

Objectives of the project: To get the idea about stock markets and to understand the analyzing of the datas in the market.

Tool used: Python, Excel, and some libraries of python: yfinance, pandas, openpyxl, numpy, datetime etc.

Details of Papers/patents: None

Brief description of the working environment: Did not get to know much about the environment. Only a single company official talked to use on online meets 2 times a week for 15 minutes each. So not much interaction with the company officials.

Academic courses relevant to the project: Derivatives and Risk Management

Learning Outcome: Deeper understanding in finance and the terms used. Information about ratios and different kind of investing strategies.

PS-I station: Futures First Info Services Pvt. Ltd. , Gurugram

Student

Name: ANANYA JALAN . (2021B3A72963H)

Student Write-up:

PS-I Project Title: REGRESSION AND TIME SERIES ANALYSIS

Short Summary of work done: During 8 weeks as an intern we had to learn regression and time series analysis and all the formulas related to it. Apart from learning the theory we also had to understand how it is used in excel and how it can be applied in real life to solve problems. We then made a dashboard which tested the various theories and allowed users to enter any data and then test theories on it.

Objectives of the project: To understand the concept of regression and time series analysis and its applications to make a dashboard .

Tool used: Excel

Details of Papers/patents:-

Brief description of the working environment: The working environment was very flexible and subject to many changes as it was an online internship. The work hours were not well defined and based purely on completion of the tasks assigned. It was not very

hectic or burdening in any sense. However our interaction was with only one member of the company and hence we could get an appropriate feel.

Academic courses relevant to the project: Math and stat
PNS
Econometric Methods
Applied Econometric

Learning Outcome: Real life applications of regression and time series using excel effectively

---

Student Write-up:

PS-I Project Title: QUANTITATIVE METHODS FOR MODERN PORTFOLIO THEORY

Short Summary of work done: The project is to provide a code which could later be used by the junior employees and be delivered as product by Futures First Info Services Pvt. Ltd. The task is to work on Nifty50 but it could be easily scalable to more companies as well as to other indices .Provided code implements an efficient frontier analysis and visualization for the Nifty50 companies. The efficient frontier is a concept in modern portfolio theory that helps investors optimize their investment portfolios by balancing risk and return. After that the portfolios are optimized by Mean Variance Portfolio Optimization model and Black-Litterman Portfolio Optimization model.

Objectives of the project: create efficient frontier tracker.Create portfolios with Nifty50 companies and optimize them.

Tool used: Python

Details of Papers/patents:N.A.

Brief description of the working environment: Overall it was a good experience.

Academic courses relevant to the project: N.A.

Learning Outcome: learnt about many libraries of python

PS-I station: Grad Capital Advisors , Delhi

Student

Name: SAYAN NANDI (2021A3PS2629G)

Student Write-up:

PS-I Project Title: Valuation Model of new-age tech startups and VC firms

Short Summary of work done: My work during PS was divided into two major tasks. As a part of my first task, I created a DCF valuation model of an Indian tech startup company that recently went public. I chose Policybazaar (PB Fintech) for the same and arrived at an intrinsic value that implied the current stock price was highly overvalued. For this task, I referred to the lecture series on Valuation by Damodaran. For the next task, I created a simplified valuation model of an Indian VC firm - Titan Capital. In this task, I analysed the portfolio companies of the firm, the amount they invested, the entry price, markups and the return multiple/exits (if any). Looking at this model, I was asked to infer if it was worth committing capital to the firm as a part of one's diversified investment portfolio.

Objectives of the project: To learn valuation models such as DCF and understand the working of VC firms

Tool used: MS Excel, Tracxn, Crunchbase

Details of Papers/patents:NA

Brief description of the working environment: The mentor was extremely helpful throughout the duration. We had weekly catch-ups where we discussed the progress of the task and he guided us through any problems we faced. He was also available to clear our doubts through email. Working in a VC firm, I expected to understand their working model in and out and I was able to get that knowledge from the mentor. He walked us through the present startup scenario in the country and the state of VC firms. It was a good experience overall as we got hands-on learning of creating DCF valuation models.

Academic courses relevant to the project: Fundamentals of Finance & Accounting, Business Valuation & Analysis, Financial Management, SAPM

Learning Outcome: Learnt why valuation of startups and young companies are more complex than publicly listed firms. Also learnt about the working of a VC firm, how funds are managed and what decisions one needs to account before investing in a VC firm as a LP(Limited Partner)

PS-I station: Grad Capital Advisors , Delhi

Student

Name: SHOBHIT RATHI . (2021B3A30980P)

Student Write-up:

PS-I Project Title: Valuation model of new-age tech startups and VC firms

Short Summary of work done: My PS was divided into multiple tasks during the course. I started with understanding startup ecosystem in India and the world. After this I valued a tech startup which recent went public (Paytm). After this I evaluated the portfolio of a VC firm (Peak XV Partners) in India and the last one was to find relevant and suitable investors for the company.

Objectives of the project: Understanding the core of Valuation and startup ecosystem

Tool used: Tracxn and Crunchbase Softwares, Researching and Analytical skills, Presentation and Communication skills

Details of Papers/patents:NA

Brief description of the working environment: The work environment was good and we were encouraged to ask any doubts we had during the meet and we can email them anytime. I expected to get finance related project from the company as it is a VC firm which was fulfilled. I learnt about the valuation methods and procedure, a lot about startup ecosystem, evaluating a VC portfolio and how to find the most relevant investors for a company.

Academic courses relevant to the project: Financial Management, Derivatives and Risk Management

Learning Outcome: Valuation Methods | Startup Ecosystem | Research Methods | Evaluating VC portfolio

Student

Name: PAVAS GARG . (2021A7PS2587H)

Student Write-up:

PS-I Project Title: Cybersecurity For Endpoints Using AI and ML

Short Summary of work done: Studying endpoint cybersecurity required first learning the fundamentals of computer networks, including how routers, lans, and subnets operate. After that, we learned about the OSI Model, EDR, and XDR tools. We also conducted research on the endpoint cybersecurity solutions that various firms use, like Sentinel One, Rapid 7, and CrowdStrike, to name a few. Making a machine learning model to detect insider threat required cleaning and pre-processing the data, followed by training the ML models to properly anticipate the results of the model. This was the project's final step.

Objectives of the project: To study endpoint cybersecurity, user and entity behaviour analytics (UEBA), and apply ML/DL to detect insider threats

Tool used: Jupyter Notebook, Python, Pandas, Numpy, Matplotlib, Scikit-learn, AWS-Virtual Machine

Details of Papers/patents:NA

Brief description of the working environment: Working environment was very good, we got full support from the company mentor regarding our project, he explained each and every thing like how to proceed and also gave us resources from where to study.

Academic courses relevant to the project: Computer Networks, Machine Learning, Cryptography

Learning Outcome: Gained a greater comprehension of endpoint cybersecurity and how computer networks operate. Studied endpoint cybersecurity solutions like XDR and EDR. I also learned about all the features utilised for data analysis, including system logs, IP addresses, and others.

Student Write-up:

PS-I Project Title: Creating a video conferencing app

Short Summary of work done: we have explored the functioning of hospital the different services provided by the hospital, the importance of Hospital Management Information System, it elevates the standards of patient care by increasing operational efficiency, and fostering better communication among healthcare providers. By embracing technology and harnessing the power of data, hospitals can optimize their resources, streamline workflows, and enhance patient experiences. We examined the different tools in web development used HTML tags and understood its functions, examined parent- child relationship pattern in Angular and the implementation of reactive forms, shedding light on their significance and best practices for successful utilization. Understanding the parent-child relationship pattern in Angular and effectively implementing reactive forms are essential skills for building dynamic and interactive web applications. By leveraging these concepts, developers can create flexible and scalable user interfaces that provide seamless data management and user input handling capabilities. With proper component communication Angular empowers developers to build robust and efficient applications that meet the needs of modern web development. In the subsequent weeks, we looked into web development, exploring the creation of a user registration interface, a chat application, and a video conferencing app. Throughout this endeavour, we delved into various aspects of frontend and backend development, learning valuable skills and gaining hands-on experience in building interactive and engaging web applications. The user registration interface serves as a fundamental entry point, allowing users to sign up and access the full suite of features within the applications. Implementing user

authentication and password encryption bolstered security, ensuring that user data remains confidential and protected. The chat application enabled real-time communication, fostering seamless interactions and collaborations among users. Leveraging WebSocket technology, we achieved low-latency and bidirectional communication, facilitating instantaneous message exchanges. Features like user typing indicators and participant management enhanced the user experience, creating an intuitive and interactive platform. The video conferencing app implemented real-time video and audio streaming and allowed users to conduct live video conferences, bridging geographical gaps and enabling face-to-face interactions. Screen sharing and chat functionality enriched the conferencing experience, making it conducive to presentations, demonstrations, and engaging discussions. As we progressed through these projects, we honed our skills in frontend frameworks like Angular, developing dynamic and responsive user interfaces. Simultaneously, we explored the backend capabilities of Spring Boot, managing data, handling user authentication, and facilitating real-time communication through WebSocket. Furthermore, the projects emphasized the importance of user experience (UX) design, focusing on creating interfaces that are visually appealing, intuitive, and user-friendly. Error handling and validation were crucial aspects, ensuring data accuracy and providing helpful feedback to users. Throughout the Practice school, we gained valuable insights into the intricacies of web development, from conceptualization and design to implementation and deployment. These small yet impactful projects laid the foundation for more ambitious endeavours in the realm of web development. As I conclude my PS journey, I carry with me a sense of accomplishment and a deepened passion for building innovative web applications that empower seamless interactions and virtual collaboration. With newfound knowledge and expertise, I am eager to embark on future projects, leveraging the power of web technologies to bring even more innovative solutions to life.

Objectives of the project: To make patients interactions with doctors easy

Tool used: HTML, CSS , Javascript , Angular framework , Java Spring boot , Mongodb

Details of Papers/patents:NA

Brief description of the working environment: IT department of Swasthya Bhavan provided assistance and cooperation, especially Mr Chandan, Mrs Debolina, and Mr Rafiqul. Their willingness to lend a helping hand, answer my questions, and provide guidance whenever needed has been invaluable.

Academic courses relevant to the project: NA

Learning Outcome: Integration of backend with frontend. Creating web applications using different tools

PS-I Project Title: Time Motion Study and Process Mapping under Quality Management

Short Summary of work done: During our PS-I we were assigned various works that helped us in gaining various skills and work-related experience. We were given Health and Family Welfare Department as our PS station. From that we were assigned M R Bangur Hospital , Kolkata. In the hospital we did various works. We went to various departments and there we observed and noted down the time required for various activities for different departments. This was known as the 'Time Motion Study'. Then we were given different departments to perform a process mapping. In a process mapping, we were required to make a work flow of each department that were assigned to us. So we visited the departments , carefully observed the work flow that was going on and make a note of it. This was very helpful in knowing the inefficiencies , understanding the work flow and eliminating the bottlenecks. We also got to learn various important concepts for hospital management like the biomedical waste management , Quality management , Quality circles , Six sigma concept , etc. Overall our PS-I helped us gaining various work related skills and also our work experience.

Objectives of the project: 1. Clarity and Understanding ; 2. Identifying Inefficiencies and Bottlenecks ; 3. Standardization ; 4. Process improvement ; 5. Communication and Collaboration ; 6. Risk Analysis and Compliance

Tool used: 1. Process Mapping Software , 2. Root Cause Analysis Tools , 3. Quality Management Software , 4. Survey and Feedback Tools , 5. Patient Safety Reporting Systems

Details of Papers/patents: Not Applicable

Brief description of the working environment: Work environment in M R Bangur Hospital was pretty nice. Our mentor provided us with enough help and guidance throughout the PS. Being a prominent hospital in Kolkata M.R. Bangur Hospital often experiences a high volume of patients seeking medical care. Like any well-established hospital, M.R. Bangur Hospital operates with a multidisciplinary approach. It has various medical and surgical departments, each with its specialized team of doctors, nurses, and support staff. The working atmosphere in M.R. Bangur Hospital may vary across departments.
Expectations may include hiring more number of doctors and staff to reduce patient waiting time as it is often seen patients waiting for a long period of time due to lack of doctors and staff.
During our PS I we learned various important concepts and work related to hospital management that helped us in gaining experience and develop our skills. We learned concepts like biomedical waste management, quality circles, six sigma concept , quality management , etc. We also learned Time Motion Study and Process Mapping which helped us to improve the observation skills and also helped in hospital betterment.

Academic courses relevant to the project: 1. Biological chemistry ; 2. Principles of Management (POM)

Learning Outcome: 1. Understanding Process Flow ; 2. Root Cause Analysis ; 3. Process Optimization ; 4. Process Automation Opportunities ; 5. Improved Customer (Patients) Experience ; 6. Data-Driven Decision Making

PS-I station: Health & Family Welfare Department - Management , Kolkata

Student

Name: HEMANT AGARWAL (2021B4TS2056P)

Student Write-up:

PS-I Project Title: Hospital and quality management

Short Summary of work done: During PS-I, I focused on hospital and quality management, specifically time motion study and process mapping. Time motion study involved recording and analyzing hospital staff activities to identify inefficiencies. Process

mapping visually represented key hospital processes, aiding in streamlining workflows. The project aimed to optimize operations, enhance patient care, and maintain high-quality standards. By identifying critical control points and implementing quality assurance measures, we worked towards a culture of continuous improvement. The ultimate goal was to improve the overall patient experience and healthcare outcomes in the facility.

Objectives of the project: To observe the work flow of hospital systems

Tool used: EXCEL.

Details of Papers/patents:NONE

Brief description of the working environment: During PS-1, I worked in a dynamic and professional hospital environment, collaborating with various departments to focus on patient care and safety.
overall PS-1 was equipped with practical knowledge, improved teamwork skills, and prepared me for a successful future in healthcare management.

Academic courses relevant to the project: NONE

Learning Outcome: Learned process mapping of different departments of the hospital.

PS-I station: Health & Family Welfare Department - Management , Kolkata

Student

Name: ASHISH RANJAN (2021B5A42135G)

Name: NAGULAPALLI SANKEERTI (2021A2PS2154P)

Student Write-up:

PS-I Project Title: Making anterior capsule for eye button model

Short Summary of work done: Conducted research about how other institutions dealt with this. Went to markets to collect materials we thought could work. Tried out the materials. Found gelatin could work but with less thickness. So made it ourselves by dissolving gelatin powder in water and forming sheets.

Objectives of the project: Find a suitable material closely resembling eye's anterior capsule

Tool used: Research papers

Details of Papers/patents: Nothing

Brief description of the working environment: The environment was friendly and everyone was willing to offer guidance when needed. Thought it'd be good if we were called to the institute more frequently.

Academic courses relevant to the project: Material design

Learning Outcome: Material research and design

PS-I station: Hyderabad Eye Institute (DBA â€“ L V Prasad Eye Institute) , Hyderabad

Student

Name: MEGHNA REDDY YADMA . (2021A3PS2762H)

Student Write-up:

PS-I Project Title: Designing anterior capsule on eye button model for capsulorhexis step

Short Summary of work done: The project focused on developing a realistic anterior capsule for eye button models used in capsulorhexis simulation for cataract surgery. Several materials, including polymers and gelatin sheets, were evaluated based on specific criteria such as thickness, tear resistance, elasticity, and compatibility with

surgical tools. Gelatin sheets showed promise as a suitable material, offering the desired properties for accurate simulation. Other materials had limitations in replicating the anterior capsule effectively. The outcomes contribute to improving surgical training and potentially enhancing surgical outcomes and patient satisfaction in cataract surgery.

Objectives of the project: The objective of our project is to design and develop a realistic and functional anterior capsule for the eye model used in simulating the Capsulorhexis step of cataract surgery.

Tool used: H/w

Details of Papers/patents: No papers or patents related to the project have been published or filed.

Brief description of the working environment: During my PS-I at LVPEI, I worked on a project focused on developing a realistic anterior capsule for capsulorhexis simulation in cataract surgery. The company provided a dynamic and supportive working environment, allowing me to experiment with various materials and evaluate their suitability. I was expected to actively contribute to the project, showcase problem-solving skills, and collaborate with the team.
Throughout the internship, I learned about material properties for surgical simulation, emphasised the importance of realism in training, and honed my research and practical application skills. Working alongside experienced professionals, I gained valuable insights into the field of ophthalmology and surgical training.
The PS-I experience has been instrumental in expanding my knowledge and preparing me for future endeavours in the medical field. I am grateful for the opportunities provided by LVPEI and the valuable learning experiences during the project.

Academic courses relevant to the project: None

Learning Outcome: The major learning outcomes from the project include understanding material properties for simulation, emphasising realism in surgical training, fostering problem-solving and innovation, promoting collaboration, expanding knowledge in cataract surgery, and practical application for better patient care.

PS-I station: Hyderabad Eye Institute (DBA â€“ L V Prasad Eye Institute) , Hyderabad

Name: ASHRITA NAIDU VAKA . (2021A3PS3061H)

Student Write-up:

PS-I Project Title: Product Development- Creating an anterior capsule for the eye button model in the capsulorhexis step of Cataract Surgery

Short Summary of work done: we had to come up with a material to make a an anterior capsule for the capsulorhexis step in the Cataract surgery for training surgeons and we had used the idea of a gelatin substance to make a layer which can easily be removed for the training surgeons and has a lot of research on the already existing materials various institutes are using throughout the world . we came up with a gelatin sheets as our final products and we had to experiment with various materials .

Objectives of the project: To be able to come up with a product design for the step required.

Tool used: hard ware developments -product design skills , research skills , presentation skills

Details of Papers/patents:not decided yet

Brief description of the working environment: The company is extremely nice and helpful to the students throughout the project. They are extremely understanding and attentive to the students and put in their efforts to cater to the students learning and growth .

Academic courses relevant to the project: nothing particular

Learning Outcome: improving on-ground research and product design skills .

PS-I station: Hyderabad Eye Institute (DBA â€“ L V Prasad Eye Institute) , Hyderabad

Student

Name: B SAHANA . (2021A5PS2025H)

Student Write-up:

PS-I Project Title: MICROBIOLOGICAL CULTURE CHARACTERISTICS OF EXPIRED DONOR CORNEAS PRESERVED IN MK SOLUTION FOR 6 WEEKS COMPARED TO THE BASELINE

Short Summary of work done: We cultured the expired donor cornea's preservation media for 1-6 weeks in culture medias like BHI and Blood agar to check for microbiological growth. This test helps in analyzing if the preservation media is safe to store the donor cornea after expired shelf life date.

Objectives of the project: To check out for microbiological contamination of the donor corneal preservation media

Tool used: Powerpoint, word, microscope

Details of Papers/patents:-

Brief description of the working environment: We worked in the Eye Bank of LVPEI, the faculty members were kind and explained the procedures that were followed during the examination of the specimen. People are very organised and always maintain a hygienic environment.

Academic courses relevant to the project: microbiology, pharmaceutical analysis

Learning Outcome: Learnt about different types of biochemical tests used for analyzing type of organism grown. The layers of cornea and its importance.

PS-I station: Hyderabad Eye Institute (DBA â€“ L V Prasad Eye Institute) , Hyderabad

Student

Name: GUDUPUDI THISYA KETHU . (2021A8PS1618P)

Student Write-up:

PS-I Project Title: Designing anterior capsule for eye button model

Short Summary of work done: In the initial days we were indroduced to the way of woek at lv prasad eye institute, we were briefed on how they function. Later after many demonstrations we were given a couple of choices for our project and certain time to choose one. After we chose our project we were supervised throughly and given a good working environment. We completed our project within the time of the internship. We submitted a project report of our project and they were satisfied with our work. I personally think this has helped me learn a lot about practical work.

Objectives of the project: To design a specific layer in the capsulorhexis step of cataract cataract surgery.

Tool used: We were focused on market research so our tools included some research articles and rest was ground work and interacting with the market.

Details of Papers/patents: Following are the links to the journals we have referred to:
https://www.jcrsjournal.org/
https://www.thieme-connect.com/products/ejournals/journal/10.1055/s-00000032
https://www.emerald.com/insight/publication/issn/2052-6455
https://pubmed.ncbi.nlm.nih.

Brief description of the working environment: The working environment at this institute was very guided and I can say it was healthily competitive. Although my expectations were for the management domain, I believe we may have strayed from that path a bit. But our project involved market research and I can say that it has certainly helped my presentation and communication skills in a work environment.

Academic courses relevant to the project: None from any of the my past courses

Learning Outcome: Learnt a lot about product development, market research. Helped in presentation skills.

PS-I station: Hyderabad Eye Institute (DBA â€“ L V Prasad Eye Institute) , Hyderabad

Student

Name: VARSHITH SRINIVASA PEDDADA . (2021A8PS1660H)

Student Write-up:

PS-I Project Title: Designing Anterior capsule for Eye button model for capsulorhexis step

Short Summary of work done: the work involved in reading a lot of research papers to understand the materials which could be suitable to designing the capsule. This research work also included conducting ground level research which required us to go to koti and enquire about the kind of materials that are readily available in the market

Objectives of the project: researching materials to design an appropriate anterior capsule

Tool used: Microsoft powerpoint

Details of Papers/patents:none

Brief description of the working environment: the working environment involved a lot of equipments that are crucial for cataract operation, this involved microscopes, forceps etc. As for the people everyone was really professional and helpful. Help was readily available when asked for. Overall i would say that LV Prasad Eye Institute was a good first introduction to the professional world. During PS1, I learnt how to behave in a professional setting, we were also told to make presentation, so that was a valuable skill i picked up

Academic courses relevant to the project: bio f111

Learning Outcome: reading research papers, teamwork, making presentations, communication skills

---

PS-I station: Hyderabad Eye Institute (DBA â€“ L V Prasad Eye Institute) , Hyderabad

Student

Name: ANUNAY VERMA . (2021B2A42478H)

Student Write-up:

PS-I Project Title: Making anterior capsule on the eye button models for Capsulorhexis step.(wet lab): to enable trainees with more accessible mode to practice CCC.

Short Summary of work done: We went through and tested many materials such as rice paper, tissues, masking tape, poly vinyl alcohol, poly dimethyl siloxane, and gelatin sheets. All these materials were tested on an eye model to see if they were suitable or not. Most of the materials had some issue which made them unsuitable for our purpose, many were too strong while others just did not match the proprties of the anterior capsule, at the end we were left with gelatin sheets which worked and can be used for training capsulorrhexis.

Objectives of the project: To make a viable model to simulate capsulorrhexis step in MSICS for the purpose of training surgeons

Tool used: Syringes, scalpels, glass plates, silicone.

Details of Papers/patents: We did not write any papers or patents

Brief description of the working environment: Where we worked, the wet lab was suited to perform surgeries, we tested the materials tn this lab, the research was done mostly independently but there was a library available for refrence

Academic courses relevant to the project: Polymer chemistery

Learning Outcome: methods of research and development, experimentation,

Student Write-up:

PS-I Project Title: Warehouse Book

Short Summary of work done: During my Professional Semester I (PS-I), I actively participated in a challenging and rewarding internship where I worked on a diverse range of tasks and projects. I collaborated with a team to develop a management application called the Warehouse Book. My primary responsibilities included designing and implementing the login/dashboard, finance, and asset modules. I also contributed to the development of the partial space leasing feature, which allowed users to efficiently manage space rentals within the warehouse. To facilitate effective collaboration and visualization of ideas, my team and I utilized Figma, a cloud-based design tool. This helped us iteratively create and refine our product design, resulting in an easy-to-use, interactive, and fluid application. Throughout the internship, I demonstrated versatility by engaging in multiple areas of the project, proving my ability to adapt and contribute to various aspects of the application. This experience allowed me to sharpen my problem-solving and communication skills while working with a diverse team of professionals. Overall, my PS-I was a valuable learning experience that enabled me to apply my knowledge, creativity, and dedication to create a practical and user-friendly management app for warehouse operations. The internship not only enhanced my technical expertise but also provided me with valuable insights into the software development lifecycle and the importance of seamless collaboration in project success.

Objectives of the project: To create a management system on smaller devices for the both large & small warehouse managers to manage their employee attendance, finance, assets & more.

Tool used: Figma & Fig-Jam, Power Point

Details of Papers/patents:NA

Brief description of the working environment: Good work environment, if you are willing to put effort into the work & manage to impress the founder, his socials are really valuable.

Academic courses relevant to the project: None, all were useless

Learning Outcome: User-Centric Design: Through the revamp process, I have learned the importance of prioritizing user experience and creating a user-centric design. The utilization of components in Figma and the enhancements made to the user interface reflect my understanding of designing for user satisfaction and efficiency.
Integration of Data Visualization: The integration of charts and statistical data in the main dashboard demonstrates my ability to incorporate data visualization to provide valuable insights. This skill allows users to make informed decisions based on attendance patterns and trends.
Streamlining Processes: My expertise in streamlining the registration process and introducing a fluid marking system showcases my capacity to simplify complex processes, reducing friction for users and enhancing overall system efficiency.

Employee Management Solutions: The comprehensive employee view options and shortcuts indicate my proficiency in developing solutions that facilitate efficient employee management, such as leave management and attendance history tracking.
Research and Project Management: My successful revamp of the attendance module and the development of the partial space module demonstrate my research skills, project management abilities, and attention to detail throughout the process.

Student Write-up:

PS-I Project Title: Warehouse Book

Short Summary of work done: The Warehouse Book Project is a comprehensive and informative guide to understanding and optimizing various aspects of warehousing, logistics, and supply chain management. As the project lead, my role focused on two main components: developing the finance module and creating content for different types of warehouses using Canva. In the finance module, I aimed to provide readers with a solid understanding of the financial aspects related to warehouse operations. This module covered key financial metrics, budgeting techniques, cost analysis, and Return on Investment (ROI) evaluation. By incorporating real-world case studies and practical examples, I ensured that readers could apply the knowledge gained to make informed financial decisions, optimize resource allocation, and improve overall warehouse profitability. In parallel, I took charge of creating visually engaging and informative content for the various types of warehouses. Using the Canva platform, I designed eye-catching graphics and infographics to showcase the unique features and functions of distribution centers, fulfillment centers, cold storage facilities, bonded warehouses, cross-docking facilities, and more. The content emphasized the importance of each warehouse type within the supply chain and highlighted their specific roles and benefits. Throughout the project, I collaborated with various stakeholders, including subject matter experts, colleagues, and company Founder Arun Pandit, who provided valuable feedback and insights to refine the content. The book aimed to become a go-to resource for industry professionals, students, and anyone interested in the dynamic world of warehousing. In conclusion, my contribution to the Warehouse Book Project encompassed the creation of

a comprehensive finance module and visually appealing content on different warehouse types using Canva. The project was a result of meticulous research, collaboration, and dedication, with the ultimate goal of providing readers with actionable knowledge to optimize warehouse operations and achieve business success in the dynamic logistics landscape.

Objectives of the project: Objectives of the Warehouse Book Project: Knowledge Compilation: The main objective of the warehouse book project is to compile comprehensive knowledge and information about various aspects of warehousing, logistics, and supply chain management. This book aims to become a valuable resource for industry professionals, students, and anyone interested in understanding the principles and practices of warehousing. Industry Best Practices: The project intends to capture and present industry best practices related to warehouse operations, inventory management, material handling, and distribution. By including real-world case studies and examples, the book aims to provide practical insights that can be applied in different warehouse environments. Types of Warehouses: The book will categorize and describe different types of warehouses, such as distribution centers, fulfillment centers, cold storage facilities, bonded warehouses, cross-docking facilities, and more. The objective is to help readers understand the unique features and functions of each warehouse type and their relevance in different supply chain scenarios.

Tool used: Figma and Canva

Details of Papers/patents:NA

Brief description of the working environment: Hyphen SCS, a dynamic and innovative company, offers a vibrant working environment that fosters creativity, collaboration, and professional growth. As an intern during the Professional Skills Phase I (PS-I), I experienced a positive and supportive workplace culture that encouraged learning and development.

The working environment at Hyphen SCS is characterized by a modern and well-equipped office space that promotes efficiency and comfort. The company values open communication and encourages employees, including interns like myself, to voice their ideas and contribute to various projects. The team-oriented atmosphere allows for seamless collaboration with colleagues from diverse backgrounds and areas of expertise. From the company, I had clear expectations of embracing challenges and taking ownership of my assigned tasks. Hyphen SCS values proactive individuals who demonstrate a strong sense of responsibility and a willingness to go the extra mile to achieve excellence. During my PS-I, I was encouraged to seek guidance and feedback whenever needed, ensuring I was on the right track and continuously improving.

Hyphen SCS prioritizes continuous learning and skill development. As an intern, I was provided with valuable opportunities to attend workshops, training sessions, and seminars related to the company's industry and emerging trends. This learning culture was instrumental in broadening my knowledge and honing my skills, making my internship experience both educational and rewarding.

During PS-I, I was exposed to real-world projects and had the chance to contribute meaningfully to the company's objectives. This hands-on experience allowed me to apply theoretical knowledge gained in my academic studies and sharpen my problem-solving abilities. I had access to mentors and experienced professionals who guided me throughout the process, fostering a conducive learning environment.
In summary, my internship at Hyphen SCS provided me with a stimulating working environment, with clear expectations to take ownership of my tasks and collaborate effectively. The company's commitment to learning and development further enriched my experience, and the exposure to real projects offered invaluable insights into the industry. My time at Hyphen SCS was both fulfilling and transformative, leaving me with newfound skills and a sense of accomplishment.

Academic courses relevant to the project: NA

Learning Outcome: Major Learning Outcomes of the Warehouse Book Project:
1. Comprehensive Understanding of Warehousing: Readers will gain a deep and comprehensive understanding of various aspects of warehousing, including its role in the supply chain, different warehouse types, and their specific functions.
2. Industry Best Practices: The project will provide insights into industry best practices in warehouse management, inventory control, and distribution, enabling readers to adopt efficient and proven methods in their own operations.
3. Warehouse Design and Optimization: Readers will learn about warehouse design principles, layout optimization, and storage solutions, allowing them to create well-organized and efficient warehouses that maximize space utilization.
4. Inventory Management Techniques: The book will cover various inventory management techniques, such as ABC analysis, JIT inventory, safety stock, and order management, helping readers manage their inventory levels effectively and minimize costs.
5. Technology Integration: Readers will be introduced to modern technologies and automation solutions used in warehousing, such as Warehouse Management Systems (WMS), IoT, robotics, and autonomous vehicles, empowering them to leverage technology for improved efficiency.
6. Sustainable Warehousing Practices: The project will highlight sustainable and eco-friendly practices in warehousing, promoting environmentally responsible approaches to reduce carbon footprint and support green initiatives.

PS-I station: Indian Council for Research on International Economic Relations , New delhi

Student

Name: MALA JAIN . (2021A5PS0362P)

Student Write-up:

PS-I Project Title: Assessing the Role of G20 Members in Enhancing GVCs

Short Summary of work done: During my research internship at ICRIER, I undertook a comprehensive study on the impacts of G20 members within Global Value Chains (GVCs). The research project involved meticulous data curation and extraction from databases like TiVA and WITS, which proved to be invaluable resources for our investigation. The availability of data from TiVA and WITS played a crucial role in enhancing our understanding of GVC dynamics and their implications for the global economy. TiVA's unique approach allowed us to track value added at each stage of the supply chain, providing a more accurate assessment of countries' actual contributions to global exports. This helped G20 member countries, including India, identify opportunities to strengthen their involvement in higher value-added stages, shaping strategic policies to maximize benefits from GVC participation. WITS, on the other hand, allowed us to analyze trade flows, tariff rates, and non-tariff measures, empowering policymakers to design effective trade and investment policies. By identifying potential markets for products and services, G20 countries could align their export strategies with emerging opportunities in GVCs, optimizing their positioning to tap into global demand. Throughout the research, we also explored backward and forward linkages of countries, intermediate import/export patterns, and the top products and countries involved in GVC transactions. These analyses provided critical insights into the evolving dynamics of GVCs and fostered evidence-based discussions among G20 members, promoting collaboration and coherence in addressing GVC-related challenges and opportunities. Furthermore, using R for basic analysis of G20 summit reports, we ascertained the trends in the importance given to GVCs and related keywords, further enriching our understanding of the evolving GVC landscape within the G20 context. Overall, the work I conducted during my internship contributed significantly to the ongoing research on "Assessing the Role of G20 Members in Enhancing Global and Regional Value Chains." The data-driven insights and evidence-based policy recommendations aim to foster inclusive growth, enhance economic competitiveness, and promote international economic cooperation among G20 countries and beyond. I am grateful for the enriching experience and remain committed to furthering our understanding of the intricate dynamics that shape the global economy.

Objectives of the project: Objective 1: Identify Relevant Databases and Data Sources The first objective of the study was to identify and select appropriate databases that contain relevant information on Global Value Chains (GVCs) and the contributions of G20 member countries. This involved researching and evaluating various databases, such as TiVA (Trade in Value Added) and WITS (World Integrated Trade Solution), known for their comprehensive and reliable data on international trade, value chains, and economic

indicators. Objective 2: Data Curation and Extraction Once the databases were identified, the study's next objective was to curate and extract the essential data necessary for assessing the impacts of G20 members within GVCs. This step required meticulous attention to detail and careful data management to ensure accuracy and consistency in the information retrieved. Researchers likely had to filter out irrelevant data, harmonize data formats, and resolve any discrepancies between different sources. Objective 3: Aggregating Data for G20 Countries The third objective focused on aggregating the curated data for each G20 member country. This involved gathering data on their exports, imports, value-added contributions, intermediate inputs, and other relevant indicators within the context of GVCs. By compiling this information, the study aimed to offer a comprehensive overview of the G20 countries' involvement and roles in the global value chains. Objective 4: Analyzing GVC Contributions of G20 Members With the aggregated data in hand, the next step was to analyze the contributions of G20 member countries within Global Value Chains. This objective likely involved conducting quantitative analyses, econometric modeling, and statistical assessments to understand the relative importance of each country in the GVC landscape. Researchers aimed to highlight patterns, trends, and variations among G20 nations in terms of their roles in GVCs. Objective 5: Identifying Dynamics Shaping GVC Landscape Another critical objective of the study was to identify the intricate dynamics that shape the Global Value Chain landscape. This step likely involved investigating factors such as trade policies, supply chain integration, foreign direct investment, technology transfers, and other determinants influencing how G20 countries participate in GVCs. The aim was to gain a deeper understanding of the underlying factors driving the behavior and outcomes within the GVC system. Objective 6: Analyzing Implications for the Global Economy Finally, the study aimed to draw meaningful conclusions about the implications of G20 countries' participation in GVCs for the global economy. By combining insights from the data analysis and the identified dynamics, the research sought to offer valuable insights into how GVCs impact economic growth, employment, income distribution, and overall global trade dynamics. The objective was to provide a solid foundation for policymakers, businesses, and stakeholders to make informed decisions related to international trade and economic cooperation.

Tool used: Microsoft Suite and R

Details of Papers/patents: The paper is to be submitted to ADBI and is still in the works.

Brief description of the working environment: The working environment at ICRIER (Indian Council for Research on International Economic Relations) is characterized by a dynamic and intellectually stimulating atmosphere. As a renowned economic research institution, ICRIER fosters a culture of academic excellence and collaboration. During my internship at ICRIER, I experienced a professional and supportive environment where I had the opportunity to work closely with accomplished researchers and experts in the field of international economics.

ICRIER sets high expectations for its interns, encouraging them to actively engage in research projects and contribute to meaningful outcomes. As an intern, I was expected

to demonstrate strong analytical skills, attention to detail, and the ability to work independently while adhering to the institution's high standards of quality and accuracy.
Throughout my internship, I had the privilege of delving into complex research topics related to Global Value Chains (GVCs) and the role of G20 members. The learning experience was immersive, involving data curation, extraction, and in-depth analysis using various databases and analytical tools. The institution provided access to a wide range of academic resources, allowing me to deepen my knowledge and understanding of GVCs and their implications for the global economy.
Moreover, ICRIER's collaborative work culture allowed me to engage in stimulating discussions, gain insights from my esteemed mentor, and collaborate with fellow researchers. This encouraged the exchange of ideas and perspectives, further enhancing my research skills and critical thinking abilities.
Overall, my internship stint at ICRIER provided me with invaluable learning opportunities, exposure to cutting-edge research methodologies, and the chance to contribute to meaningful research that has practical implications for policymakers and the international economic community. The experience has inspired me to pursue further academic and professional endeavors in the field of international economics and global trade.

Academic courses relevant to the project: Principles of Economics

Learning Outcome: During my research internship at ICRIER, I have had the privilege of gaining numerous valuable learning outcomes that have enriched my understanding of global value chains (GVCs) and international economics. Some of my major learning outcomes include:
In-Depth Understanding of GVC Complexity: Through my involvement in the research project assessing the role of G20 members in GVCs, I have gained a profound understanding of the intricate complexities that characterize global value chains. I have learned how goods and services pass through multiple countries, with each contributing specific value-added components to the final product.
Knowledge of Data Aggregation and Analysis: Working on this research project required meticulous data curation and extraction from various databases such as TiVA and WITS. I have honed my skills in data aggregation, harmonization, and statistical analysis, enabling me to derive meaningful insights from large datasets.
Insight into Regional Value Chains: In addition to examining GVCs at the global level, my internship allowed me to explore regional value chains and understand how countries within specific regions collaborate and integrate their production processes. This experience has provided me with a comprehensive view of how GVCs operate across different geographical areas.
Implications of GVCs on Economic Growth: I have delved into the economic implications of GVC participation, including its impact on economic growth, job creation, and income distribution. Understanding these effects is crucial for developing strategies to optimize GVC participation for sustainable development.
Policy Implications: Through collaboration with experienced researchers and my esteemed mentor, I have developed an appreciation for the significance of policy interventions in fostering efficient and inclusive GVCs. I have learned how policymakers

can leverage GVCs to enhance competitiveness, promote job opportunities, and support economic diversification.
Stakeholder Roles in GVCs: My internship exposed me to the diverse roles of various stakeholders, such as governments, businesses, and international organizations, in shaping and influencing GVCs. I now understand the importance of cooperation and coordination among these stakeholders to maximize the benefits of GVC integration.
Methodological Rigor: Engaging in academic research under the guidance of experienced scholars has taught me the importance of methodological rigor. From designing research frameworks to employing robust analytical techniques, I have learned to ensure the credibility and validity of research findings.
Collaboration and Mentorship: Working closely with accomplished researchers and collaborating with my mentor has been an inspiring experience. Their guidance and feedback have not only strengthened my research skills but also instilled in me a passion for contributing to the field of international economics.
Contributing to Sustainable Development: One of the most significant takeaways from my internship has been understanding how GVCs can be harnessed to promote sustainable economic development. I am now more motivated than ever to explore ways in which GVCs can contribute to poverty reduction, environmental sustainability, and social well-being.

PS-I Project Title: Documenting International Policies Undertaken for Sustainable Future

Short Summary of work done: I prepared a document containing the export promotion of green or low carbon steel related policies for several G20 countries; A critical Raw minerals report was made documenting the policies undertaken by prominent players in this sector and what steps / recommendations that India can take from them; Prepared Talking points for 5 distinguished speakers in the clean energy ministerial (CEM) held as a part of G20 in Goa, 2023. Summarised and documented the policies undertaken and

issues discussed by various countries across the sectors of industry decarbonization, battery storage, cooling,etc. during CEM.

Objectives of the project: To acquire knowledge about various policies undertaken and reports published by nations across the globe for securing a future free from carbon content and combating climate change and global warming

Tool used: Microsoft Excel, Word, RStudio, prominent news/data websites like Bloomberg, Reuters, Staitista were accessed on a regular basis, along with the official reports concerning the aforementioned topics.

Details of Papers/patents: The official reports concerning the aforementioned topics were accessed.

Brief description of the working environment: Working Environment was a bit hectic, but the team was supportive, encouraging and friendly. ICRIER is a very reputed place In India for somebody interested in a research career in economics. I learned a lot, did hard work, and feel more confident in my research and writing skills and abilities after completing the internship.

Academic courses relevant to the project: Econometrics, macroeconomics, Knowing how to read, cite and write research papers.

Learning Outcome: A lot of unheard and unpopular but effective steps are being taken by various nations to secure a sustainable future; The standard way of citing external sources and learning how to properly reference the articles/ documents written during the internship.

PS-I Project Title: Analysing energy optimization

Short Summary of work done: I worked on different optimisation tools for clean energy and also worked in ministerial clean energy summit.

Objectives of the project: learn about OSeMOSYS and its applicatoin

Tool used: OSeMOSYS, EXCEL, R

Details of Papers/patents:not such

Brief description of the working environment: Very good environment

Academic courses relevant to the project: Not such

Learning Outcome: Deep knowledge in green energy

PS-I station: Indian Red Cross Society - Blood Donation Camp , Bengaluru

Student

Name: MAHIP GORANA . (2021B2A42157P)

Student Write-up:

PS-I Project Title: DATA COLLECTION AND PROCESSING

Short Summary of work done: During my internship at IRCS KSB, I successfully developed a machine learning model aimed at predicting the organization of blood donation camps, with the goal of increasing blood collections. Utilizing Python's machine learning capabilities, I implemented an efficient and accurate model that can forecast the likelihood of successful blood donation camps. Additionally, I leveraged Power BI and various Python libraries to create visually appealing graphical visualizations. These visualizations were incorporated into the organization's website and app, providing users with a comprehensive and intuitive understanding of the blood donation camp data. Throughout the internship, I actively engaged in the development process, ensuring that the machine learning model was trained on relevant and up-to-date data. By employing Python's ML capabilities, I was able to construct a robust and accurate model, enabling

the organization to optimize their blood collection efforts. Overall, my internship experience at IRCS KSB was both challenging and rewarding. Through the development of a machine learning model, and the creation of graphical visualizations, I contributed to the organization's efforts to increase blood collections and raise awareness about the importance of blood donation.

Objectives of the project: To make a ML model that predicts blood donation camp location to organise for maximum blood collection and to collect data and produce graphical visualisation and content for website and app.

Tool used: Powerbi , python libraries.

Details of Papers/patents:NA

Brief description of the working environment: I had a wonderful learning experience in which I came to know about
so many new things. I got hands-on experience of professional life, felt amazing after working on a real project, and other skills like team and time management.

Academic courses relevant to the project: statistics and mathematics-I,II,III.

Learning Outcome: polished my ML and python and learnt power bi.

PS-I station: Indian Red Cross Society - Blood Donation Camp , Bengaluru

Academic courses relevant to the project: None

Learning Outcome: Web development

PS-I station: Indian Red Cross Society - Red Cross Activities , Bengaluru

Student

Name: SANJANA AGARWAL (2021AAPS0016G)

Student Write-up:

PS-I Project Title: App Development

Short Summary of work done: I learnt about the working and structure of the Indian Red Cross Society, Karnataka State Branch. I researched about what all contents we could put in the app and how we could make it simple yet efficient. I learnt how to use android studio as well as how to code in kotlin and xml which were our backend and frontend programming languages. I learnt how to implement constraints, various buttons and got to learn how to implement different UI designs. At the end, our team was successful in making an app which gave basic information about various topics as well as linked the important website pages to the app.

Objectives of the project: To make an app which provides information about first aid, disaster management, drugs, aids, basic sanitation and tuberculosis. This would make information more accessible to the rural areas.

Tool used: Android Studio- software for android development, Kotlin- backend programming language, XML- frontend programming language

Details of Papers/patents:no papers/patents

Brief description of the working environment: The working environment was supportive and collaborative. They were always ready to help us and welcomed out We expected IRCS to have a technical mentor but that was not the case. We used the internet to learn things related to our project and how to implement various codes. I was successful in learning how to make an app and how we can make it efficient. I also learnt a lot about the company, its working and structure.

Academic courses relevant to the project: none

Learning Outcome: I learnt the working of Red Cross and all the functions it performs. I learnt a lot about the topics we presented in our app as well as what all components are necessary in an app and how we can make it efficient. I also learnt how to use android studio and how to code using Kotlin and XML.

PS-I station: Indian Red Cross Society - Red Cross Activities , Bengaluru

PS-I Project Title: Resilience and Transitions - Project Management

Short Summary of work done: So every company, has some non-financial risks, and there are some industry standard parameters for each financial sentre set by the regulatory authories, as aproject managers we had to identify those non financial risks, and work on various projects to mitigate those risks.

Objectives of the project: Transitions Project - To minimise the on financial risks, financial firms under take various transitions of its various departments across different locations, such projects come under the domain of project managers. The objective of my project was to manage one such high impact project.

Tool used: MS Excel, MS PowerPoint, Power BI, Zoom Call, etc.

Details of Papers/patents:NA

Brief description of the working environment: The work culture, is great. The company promotes diversity. The office has open door system which gave me great opportunity to interact with my colleagues and seniors. I used to share the same desks with senior managements and department heads. This helped me interact with everyone and helped me gain great insights about the different operating units in a financial services company. Overall, this station gave me profound exposure to the corporate lifestyle and functioning of multi-national financial firms.

Academic courses relevant to the project: Economics, Management

Learning Outcome: The workings of a financial firm, corporate culture, a and majorly about project management and how the high impact, high cost transition projects are undertaken and managed by financial firms.

PS-I station: Macquarie Global Services Private Limited , Gurugram

Student

Name: SAAHIL MEHTA . (2021B4A71078P)

Student Write-up:

PS-I Project Title: Data Governance

Short Summary of work done: I worked in the Group Data Office under Lazer Paul. I tracked the approval of 18 different CDE(critical data elements) approval processes, was involved in the business rule definition procedure for a CDE and finally worked on training contents such as mindmaps and ppts to educate employees in the company about the Data Governance Processes. Also attended multiple meets with employees from different parts of the company in which they discussed their positions, how their day to day looked like and how their work affects the company. We also had interactive meets (as part of the Asia Summer Internship program) on personal development in fields such as public speaking.

Objectives of the project: Ensuring all critical data is under appropriate governance standards, eliminating inefficiences within the Data Under Governance processes within the organization by decreasing the manual hours of GDO employees and educating the members of other divisions about data governance practices and its implementation in Macquarie.

Tool used: Collibra, Mural, Microsoft Powerpoint

Details of Papers/patents: None

Brief description of the working environment: The company has an exceptionally flat and open structure- as on display with the lack of cabins and cubicles(the head of the office sat a few desks away from me). This means we, as interns, are free to approach any person in the org, asking for advice or even just a chat. They have a strong focus on DEI and this was evident in the efforts they took to prop up members of the LGBTQ community during pride month, the open and critical dialogue that takes place on these topics. I learnt about the Basel reforms (the need and regulations specific to Basel I, Basel II, etc.), APRA- the Australian banking regulatory agency- requirements for data and data governance processes. Also understood the inner workings of a large corporate finance organization- including the different skillsets and roles such as change manager, business analyst, etc. that are needed for the proper functioning of such an organization.

Academic courses relevant to the project: None

Learning Outcome: Learnt about the Basel reforms (the need and regulations specific to Basel I, Basel II, etc.), APRA- the Australian banking regulatory agency- requirements for data and data governance processes. Also understood the inner workings of a large corporate finance organization- including the different skillsets and roles such as change manager, business analyst, etc. that are needed for the proper functioning of such an organization.

PS-I Project Title: INVESTMENT PROJECTS UNDER TANSIM – TAMIL NADU STARTUP INNOVATION MISSION

Short Summary of work done: I have helped StartupTN achieve results in all the four projects. My work will form a solid foundation for future ideation and implementation. I tried to stick to 1st principles thinking to solve the problem statements which automatically ensures good quality and uniqueness of the final work output. 1. AngelsTN – My proposal is currently under review and some of my suggestions have already been incorporated like the media page, the portfolio startup banner, collaboration with invstt platform etc. The platform should be up by July end and we are in the process of onboarding two angel networks to kickstart the process. I will be a part of both the meetings. 2. TANFUND – The coffee table book is currently under pipeline and the first draft was approved. Parallelly, I have been working on making the startup pitches pitch ready. To make them pitch ready, I need to ensure certain guidelines are being followed by the startups as proposed by StartupTN and inform the startups about the necessary changes they need to incorporate. I also worked on onboarding VC and PE funds across the country on the platform. I had 17 converts in total which are being followed upon by senior officials. For onboarding, intricacies of cold-emailing and cold-calling was learnt and used. 3. TANSCALE – Working on devising a strategy to fuel the growth of growth-stage and late stage startups. Initial research through multiple sources shows this as a promising initiative that will create a magnificent impact on the startup ecosystem of the state. 4. STARTUP ACCELERATOR PROGRAMS – I represented StartupTN who was the organizer in 6-7 field trips and actively took part in initiating conversations, networking and knowledge seeking. I helped in event coordination and meeting with on-the-ground impromptu responsibilities in all of these events

Objectives of the project: To actively work on some of projects of the 45 live projects of TANSIM aimed at nurturing the entrepreneurial ecosystem of the state of Tamil Nadu and work aggressively towards the common goal of making Tamil Nadu a $1 trillion economy by 2030 and also the

Tool used: Google Docs, Google Sheets, Canva, Notion, Chrome extensions

Details of Papers/patents:NA

Brief description of the working environment: The work environment was very conducive in my acclimatization to the organization culture and professional environment efficiently. The office colleagues were always helpful and approachable even beyond work hours and work discussions.
My expectations from the company was partially met and I am still happy with that. I had firstly assumed to work on some core VC related work but it was not like that. I had this impression that I will be able to utilize and upskill my financial skills along the way. But the work was mostly multi-faceted in nature and I was exposed to different kinds of work throughout. The most important learning I took from the PS was forming meaningful connections and being of use to people in whatever way possible. Because people remember that. Apart from this, I learnt everything from Website planning to Designing, from document curation for professional purposes to the art of negotiation, selling and getting your point across in the most efficient way possible. Moreover, I learnt some Excel tips and tricks which I can use for a lifetime.

Academic courses relevant to the project: BITS F212 - Technical Report Writing
New Venture Creation
Business Communication
Cross Cultural Skills

Learning Outcome: My PS-1 at StartupTN gave me a lot of exposure across different domains. Following list summarizes all of them: -
1) Always make the life of your immediate senior easy. That should be the ultimate goal. This will automatically ensure quality work output
2) The art of being a good listener - It is very crucial to listen patiently. To not interrupt in between especially when some senior executive is talking to you. Earlier, I used to do that but I soon realized that this is a bad habit. First listen, then put forward your thoughts. It ensures you do not miss out on important details and also that you do not work on pre-conceived notions which may be totally wrong.
3) Website Planning
4) Strategic Thinking -
5) The art of paying attention to Details -
6) Event Planning -
7) Networking -
8) The art of asking right questions -
9) The art of making the Perfect Pitch deck -
10) Cross-cultural interaction -
11) Professionalism -
12) Extensive Knowledge about the Startup Space -
13) Graphic Designing
14) Document curation -

Student

Name: ARYAMAN MAURYA . (2021A1PS2116P)

Student Write-up:

PS-I Project Title: Strategic Social Media Marketing

Short Summary of work done: Interning at Navork, a start-up focusing on mushrooms, met to discuss their work and preferences. We researched various advertising methods, including YouTube ads, banner ads, connected TV advertising, and discovery ads. We also researched WhatsApp advertising methods for farmers, planned on using WhatsApp powered GPT's to reduce customer acquisition costs. We explored YouTube channels in the farming industry, including Apeel Sciences, Intello Labs, and Dehaat. we worked on creating a short video for the Navork Innovations channel, focusing on tags, description, thumbnail, and analytics. we also studied mushroom-related YouTube channels and farm-related channels to improve customer engagement. we created an Excel list of ten channels and analyzed their engagement to determine the most relevant YouTubers to contact for Navork Innovations' product promotion. we revised the excel sheet for YouTube channels, shortlisted three YouTubers, and pitched them to improve mushroom quality. we reviewed marketing strategies and created a Google AdSense account for their YouTube channel. The presentation took place on July 19th, and editing was done on July 20th. The team concluded their work on July 21st, reviewing their 8 weeks of work.

Objectives of the project: To increase reach and awareness about the product

Tool used: ChatGpt, Quillbot.

Details of Papers/patents:N/A

Brief description of the working environment:
My workplace was in a TCS Shed at IIT Bombay. Frankly, I did not expect anything. I learned about Microsoft Excel, Search Engine optimization, Google AdSense, and Social Media Marketing.

Academic courses relevant to the project: PAVA

Learning Outcome:
Microsoft Excel, Search Engine Optimisation, Google AdSense, and Social Media Marketing

---

PS-I Project Title: APP DEVELOPMENT

Short Summary of work done: During PS-I, I worked as an app developer intern, gaining valuable hands-on experience in the world of mobile application development. My primary responsibilities included collaborating with the development team to create and enhance mobile applications for the company's projects. I worked on a variety of tasks, such as coding new features, fixing bugs, and optimizing app performance. Throughout the internship, I had the opportunity to work with different programming languages and development frameworks, depending on the company's tech stack. This allowed me to

broaden my technical skills and adapt to different project requirements. I actively participated in code reviews and received feedback from senior developers, which helped me improve my coding practices and understand industry best practices. As an intern, I contributed to team discussions and problem-solving sessions, offering fresh perspectives and ideas. I was also involved in the testing phase, ensuring the applications met quality standards before release. This experience taught me the importance of thorough testing and the significance of user feedback in refining the app's functionality. Furthermore, the internship provided me with exposure to the professional work environment, including understanding project management processes, meeting deadlines, and working in a collaborative setting. Overall, PS-I gave me a solid foundation in app development and boosted my confidence in pursuing a career in software engineering.

Objectives of the project: to develop app based solution for automating some of excel work

Tool used: MICROSOFT SQL SERVER,VISUAL STUDIO CODE

Details of Papers/patents:NA

Brief description of the working environment: During the Practice School I (PS-I) in app development, the working environment is typically dynamic and fast-paced, especially if you are interning at a tech or software development firm. You will likely be part of a team of developers, designers, and project managers working together to create and enhance mobile applications. The office may have an open layout, encouraging collaboration and communication among team members. Expect to work with cutting-edge tools, programming languages, and development frameworks.

PS-I Project Title: Equity Research and Financial Modelling

Short Summary of work done: We were asked to prepare two comprehensive reports on 2 listed companies. Everyone was given different companies, i got Elecon Engineering and AU Small Finance Bank assigned to me. I prepared a comprehensive report by analysing the annual reports, investor presentations, conference calls and brokerage/institutional research reports. We also were asked to do ground level research i.e. talk with people involved in the particular sector or area. We were also asked to prepare a 3 statement financial model on Relaxo footwears. It was the hardest assignment of our internship as it is a tough task getting the model tallied and balanced. There was also a business development assignment where we were asked to talk to potetial clients and setup meetings with them.

Objectives of the project: Comprehensive reports about two listed comapnies namely Elecon Engineering and AU SFB. Financial modelling (3 statement model)

Tool used: Microsoft Excel

Details of Papers/patents: None

Brief description of the working environment: We were called to the office few times during our internship (around 9-10 times during ps1) as we were expected to do work from home. When we were called to the office, the working environment was nice and helpful. As mentioned above, the most important learning i got from this internship was that I was able to streamline my investment philosophy and got to learn the methods of deep and comprehensive research from the fund manager and a research analyst.

Academic courses relevant to the project: Fundamentals of finance and accounting, BAV (would be beneficial if you had basic knowledge)

Learning Outcome: Got a perspective on how to research about a company from industry experts.
Got insights about the stock market from industry mentors.
Imporved my communication skills

PS-I station: Phillip Capital India Pvt. Ltd. , Mumbai

Student

Name: ARYAMAN CHOPRA . (2021A4PS3108H)

PS-I Project Title: Fundamental Equity Research Analysis, Financial Modelling and Business Development Strategies

Short Summary of work done: The first half of the project involved an in-depth financial analysis of a company operating in the stock market from a particular sector/industry. Rigorous examination and analysis of financial statements, including the balance sheet, income statement/profit and loss statement, and cash flow statement, were conducted. Valuable insights into the company's operations were derived through ground-level

research and scuttlebutt research involving discussions with individuals associated with the industry. Key financial ratios were derived to evaluate the company's profitability and prospects. An argument/thesis was presented, considering the company's strengths and weaknesses and the potential benefits and risks of investing in it. The second part of the project focussed on business development in the portfolio management services (PMS) industry. It involved one-on-one client interaction, promoting PMS services, and implementing innovative marketing strategies. Artificial intelligence (AI) tools were utilized to enhance the reach of products and services. The objective was to provide comprehensive analysis and recommendations for investors while maximizing business potential in the PMS industry. The final part of the project entailed the financial modelling of the company assigned. Excel spreadsheets were used to create financial forecasting models, projecting the company's financial statements and future performance for upcoming quarters. Informed business decisions were made based on these models.

Objectives of the project: 1.Conduct Fundamental Equity Research Analysis 2.Develop Financial Models 3.Business Development Strategies

Tool used: Microsoft Excel, Word and Powerpoint

Details of Papers/patents: None

Brief description of the working environment: There was a good working environment present. We interacted with several individuals in key positions in the company. They provided valuable insights into fundamental equity research and the company's investment philosophy. There were also detailed discussions regarding the economy, stock market and the various industries involved. We were given several assignments regularly to facilitate learning, and feedback was provided on improving further. Overall it was a very open and valuable corporate learning experience.

Academic courses relevant to the project: Fundamentals of Finance and Accounting (FoFA) (ECON F212)

Learning Outcome: 1.Proficiency in Fundamental Equity Research Analysis
2.Financial Modeling Expertise
3.Business Development Strategies

PS-I station: Phillip Capital India Pvt. Ltd. , Mumbai

Student

Name: ANAY MUNDRA (2021A7PS2837G)

Student Write-up:

PS-I Project Title: Equity Research and Financial Modeling

Short Summary of work done: The project assigned to me fell under the Portfolio Management Services (PMS) division and primarily focused on equity research and financial modeling. My responsibility was to analyze stocks in the IT and Specialty Chemicals sectors. The main objective of the research and analysis was to predict the future growth prospects of the companies and how it might reflect in their stock prices. This process involved a thorough study of the industry, annual reports, investor presentations, and conference calls of the companies. Additionally, a major highlight of the project was the Three-Statement Financial Modeling, which aimed to predict future financials. Towards the end, we were also asked to explore possible use cases of AI in fundamental research analysis.

Objectives of the project: To assess the potential suitability of inclusion of few stocks in a Portfolio Management Service (PMS)

Tool used: MS Excel/PPT/Word, Screener

Details of Papers/patents: None

Brief description of the working environment: The working environment in the company was great. We got an opportunity to interact with a lot of senior folks at the company. The expectations from the company were communicated clearly and well in advance, and while substantial, they were well-defined.

Academic courses relevant to the project: FuFA, SAPM, PnS, POE

Learning Outcome: Fundamental Research, Equity Analysis, Financial Modeling, MS Excel

PS-I Project Title: Equity Research

Short Summary of work done: For the major part, we prepared equity analysis reports on the 2 companies given to us. We looked deep into the company's fundamentals, management and also did primary research on the current market position. We gained deep insights about them and then analysed if they were a good portfolio investment for Phillip Capital or not. In the next part, we hd business development where we learned about the financial products of Phillip Capital and arranged meetings with potential clients interested in these products. In the later stages, we were given an understand of how financial modelling works and were assigned a project on the same.

Objectives of the project: Understanding and preparing equity analysis reports

Tool used: Screener, Excel,Primary hands-on research

Details of Papers/patents:-

Brief description of the working environment: Although we were not called up to the office much for working, but the times we were called, the office had a focused and inspiring environment. Seeing and talking to the employees there, who were experts in their fields, gave us great insights into the finance industry and helped us to know about the skills required to work in it and be successful. Overall, the office experience could have been a lot better but it nevertheless provided a great learning curve which we would remember for a long time. We learned essential topics like equity research, business development and financial modelling from the best in the industry and that is something which makes the entire PS1 period worth it.

Academic courses relevant to the project: Fundamentals of Finance and Accounting, Financial Management, Portfolio Management

Learning Outcome: Equity analysis with deep insights and external market study, Business development with client acquisition meetings, learning financial modelling for a better perspective of a company's financials

PS-I Project Title: Financial Analysis of APAR Industries

Short Summary of work done: The task at hand involves conducting a comprehensive equity research and financial analysis of APAR Industries as part of the PS1 project. The aim is to obtain a thorough understanding of the company's financial performance, market position, and growth prospects in order to provide valuable insights and recommendations to stakeholders. The initial focus is on methodically and rigorously evaluating APAR Industries' financial performance. This entails analyzing key financial indicators such as revenue, profitability, liquidity, and solvency. Through a close examination of these metrics, the project aims to identify the company's strengths, weaknesses, and areas for improvement, enabling a comprehensive assessment of its overall financial health and stability. Additionally, the project seeks to assess APAR

Industries' market position and competitiveness within its industry. This involves evaluating its market share, growth trends, customer base, and competitive landscape. A thorough analysis of the company's market position will provide insights into its competitive advantages, potential threats, and growth opportunities, thereby facilitating strategic decision-making and future planning. Another crucial aspect of the project is to determine the growth potential and investment outlook for APAR Industries. This requires an examination of industry trends, market demand, and the company's ability to capitalize on growth opportunities. By identifying the key growth drivers and potential obstacles, the project aims to provide stakeholders with valuable insights to make informed investment decisions and develop effective growth strategies. Lastly, the project aims to conduct a comprehensive risk analysis and mitigation assessment for APAR Industries. This involves examining macroeconomic factors, regulatory changes, industry-specific risks, and company-specific vulnerabilities that may impact its financial performance and sustainability. By identifying and addressing these risks, the project aims to equip stakeholders with the necessary information to proactively mitigate potential challenges.

Objectives of the project: Analyze the financial performance of APAR Industries Equity Research and Business Development

Tool used: Excel, Powerpoint

Details of Papers/patents:N.A.

Brief description of the working environment: Good working environment. I got to learn about business development and different financial models.

Academic courses relevant to the project: Fundamentals Of Finance
Derivatives and Risk Management
Principles of Economics

Learning Outcome: understanding of Financial Analysis and Financial modelling

---

PS-I Project Title: Startup Sourcing and Portfolio Analysis

Short Summary of work done: PROJECT- I: STARTUP SOURCING We initiated the process by identifying potential startups through a variety of channels, including reaching out to renowned colleges and universities, leveraging alumni networks, utilizing LinkedIn, and sourcing databases from previous programs. We also conducted preliminary evaluations of the startups to assess their potential fit for the schemes. PROJECT II: PORTFOLIO ANALYSIS OF INCUBATED STARTUPS We were tasked with contacting the co-founders of the respective startups via Whatsapp to gather information on key parameters decided by us such as funding, number of team members, monthly revenue, customer acquisition cost, etc. We are also maintaining an Excel sheet containing the information. 15 After sending them the WhatsApp draft we contacted them through calls and scheduled a few G meets for the same. Over a span of 7 days, we have almost reviewed the status of all 60 companies and have updated the database in Excel. This

was a very unique experience for all of us because we didn't know how to collect data from startup founders.

Objectives of the project: Project I : Startup Sourcing The project's goal was to find potential entrepreneurs and assess their eligibility for four government programmes as well as additional opportunities offered by PIEDS. We found a good deal of companies through a variety of sources, including prestigious institutions and universities, alumni networks, LinkedIn, and databases from prior programmes. We conducted early analyses to determine whether they matched the schemes, and we learned a lot about the organizational and behavioral cultures of incubators and companies. The project needed a lot of planning, time, and organization, but it was successful in identifying and evaluating companies for the government programmes. Project II: Incubated startup portfolio analysis Reviewing the progress of firms that have already received PIEDS incubation was part of the portfolio analysis effort. We divided the startups into three categories: green for those who were thriving, yellow for those with hazy futures, and red for those that had already folded. Our team divided the list of firms that had received incubator support and contacted the co-founders to obtain pertinent data on factors like funding, team size, revenue, and client acquisition costs. We sought to evaluate the overall performance and stability of the incubated firms by looking at this data.

Tool used: Linkedin,Gmail,Gforms

Details of Papers/patents:no

Brief description of the working environment:
Right now PIEDS has a small office in FD2 so there was a bit lack of space. But, soon they will be moving to a new office which has ample space.
Learning will be related to management skills and entrepreneurship.
Overall friendly and learning-supportive culture of the organisation

Academic courses relevant to the project: New Venture Creation

Learning Outcome: 1)Improvement in communication and management Skills 2)Enhancement of knowledge related to the Indian Startup Ecosystem 3)Built a great network in the startup ecosystem

PS-I Project Title: Product Research And Game Design and Development For An Educational Finance Game

Short Summary of work done: This was a solo project so the Initial period was spent on creating a game Idea and finalizing on it. Finding the right product(game) for the market, etc. This was basically the product design and market analysis period. One this was finalized began the game design and development phase, where I had to sketch out a basic UI structure of the game in Unity to pass it on to the UI designers. I made moodboards, researched the best art styles suited and created a prototype game design . Then began the development phase as well as implenting final UI designs which i had received from the designers. The final game is a duolingo type MCQ based fun space themed finace educational game for students.

Objectives of the project: 1. To identify and ideate a finance game; 2.To create the game structure and story or gameplay; 2.To create the UI layout and art style, design elements; 4.To develop the entire final product using Unity3D and C#

Tool used: Unity3D was used for the game development along with Visual studio for coding , C# was used as the language. For UI designs figma and illustrator was used.

Details of Papers/patents:-

Brief description of the working environment: The company was situated in a co-working space in bangalore and had a very warm and fun working environment. It is a startup of just 3 years therefore had like minded and understanding peers, you also worked closely with the mentors and had regular interactions with the founders. Office was conducted in a hybrid mode with only 2-3 times a week in office attendance. For recreated the office even had a PS5 and several other amenities to use during breaks. I got to learn and improve my game development skills and was rightly alloted a project as per my skill set and interests. I also got to know the working of a startup in general and the other departments.

Academic courses relevant to the project: You will have to know C# as a language in order to work on Unity

Learning Outcome: Learnt more on Unity3d, C#, Figma (for UI/UX design), user research and product and creating UI/UX.

PS-I station: Pockvue Solutions Pvt. Ltd , Bengaluru

Student

Student Write-up:

PS-I Project Title: Backend Developer

Short Summary of work done: During PS-I, I worked as a backend engineer and actively participated in three significant projects. The first project involved the development of a Django-based Credit Scores application. I played a key role in designing the database schema using MySQL, creating RESTful APIs, and integrating third-party

APIs for credit score calculations. In the second project, I contributed to the implementation of an RFID Mi Fare Card system. My responsibilities included developing the backend logic to communicate with the RFID reader, ensuring secure data transmission, and designing the necessary database structures for card data and access logs. Lastly, I worked as a backend developer in the Certificate Generation project. I collaborated with the frontend team to define APIs, developed backend logic for dynamic certificate generation, and integrated external systems to fetch relevant data. My efforts in ensuring secure authentication and conducting extensive testing further streamlined the certificate generation process. Throughout these projects, I utilized various technologies such as Python, Django, Arduino, and MySQL. My contributions significantly impacted the success of each project, demonstrating proficiency in backend development, and fostering a collaborative and efficient working environment.

Objectives of the project: Development of Credit Score Application, RFID Card Encryption, Certificate Generation Service

Tool used: Python, Django, MySQL, React, Arduino

Details of Papers/patents: Nil

Brief description of the working environment: During my Professional Semester-I (PS-I), I worked in a hybrid mode from 11-6 daily, attending the office every Tuesday and Thursday. As a part of the backend engineer team, my mentors allocated and explained the projects, which I then researched and troubleshooted mostly independently. The projects were interesting, with one being a solo endeavor and others as team projects. We were expected to provide daily updates on the progression of our projects, and we were given the opportunity to choose projects based on our interests.
The company had a supportive environment with mentors who were readily available to assist. However, there were times when the workload was light, so taking initiative and proactively seeking work was crucial. Overall, I found the working environment to be positive and conducive to learning, allowing me to gain valuable experience in backend engineering while improving my problem-solving skills and teamwork capabilities during PS-I.

Academic courses relevant to the project: Python 3, Django, Arduino IDE, C++, MySQL, DjangoRestFramework, Various Python Libraries

Learning Outcome: Learnt about the corporate environment and how to work efficiently as a team and learnt various technical skills in the process.

PS-I station: Project Management Unit - LMS , Goa

Student

PS-I Project Title: Moodle Plugin Development

Short Summary of work done: Using the tools mentioned, I had to create plugins for the Moodle in a localhost platform, and my main areas of focus were image and geolocation.

Objectives of the project: Plugin Development

Tool used: PhpStorm, XAMPP, Moodle

Details of Papers/patents: None

Brief description of the working environment: The PMU was a wonderful experience, but only if you know coding and web-development. The atmosphere is very friendly, and mentors are very inclusive.

Academic courses relevant to the project: None that I know of

Learning Outcome: I learnt how to work with various tools in Moodle such as PHP, XAMPP, HTML, JS, CSS etc.

PS-I station: Project Management Unit - LMS , Goa

Student

Name: VATSAL CHOWDHARY (2021B4A11523G)

Student Write-up:

PS-I Project Title: Development of Extensions for Scratch

Short Summary of work done: My project involved the development of extensions for Scratch that can be used for scanning and detecting objects in the computer's webcam footage. I had to use javascript and third-party libraries to build extensions for the programming language Scratch. For the implementation of this project, basic javascript concepts had to be learnt, and the documentation of ml5, face-api.js and jsQR libraries were perused. The task was to create three extensions: a QR code scanning extension, a face detection extension and a hand position detection extension. I was successful in building all three extensions. The first extension could detect QR codes in the webcam footage, decode them and display the URL link. It could also form a bounding box around the face. The second extension could detect all of the features of the face and their positions in the webcam footage. It could also detect the size and tilt angle of the face. The third extension could detect commonplace objects with ease and could also detect handwritten digits.

Objectives of the project: To create extensions for the Programming Language Scratch to implement Machine Learning Functionality

Tool used: I used JavaScript and VSCode to develop the extensions

Details of Papers/patents: None

Brief description of the working environment: The working environment at PMU was great. We were provided with great office chairs and a computer lab with air conditioning to work in. Our mentors were very friendly and did not hesitate to help us with any problem I faced, regardless of size. It was enjoyable to work in an office, incredibly one as lively as the PMU. One of the employees at PMU used to bring a tiffin filled with sweets and share it with everyone else. The director of PMU used to visit us from time to time and check in on the work that we were doing. I found him to be a very inspiring fellow and thoroughly enjoyed my interactions with him. I expected this internship to imbibe me with a strong sense of work ethic and push me to interact and collaborate with my fellow interns, which it did. I also loved the corporate mindset present in the PMU employees. I had expected the working environment at a government office to be quite relaxed. However, it was instead quite intense. I was assigned multiple strict deadlines and was expected to meet them no matter what. The work was intense but fulfilling. I am really grateful to have done my internship at this company.

Academic courses relevant to the project: CS F111

Learning Outcome: 1. Learnt how to use JavaScript
2. Learnt how to work with and develop Extensions for Scratch
3. How to implement Machine Learning functionality in JavaScript

PS-I Project Title: AI based Chatbot using Rasa and Botman

Short Summary of work done: I learned various tools like PHP and MySQL. The chatbot project created using Rasa and BotMan involved gathering requirements, designing conversation flows, implementing NLP for intent recognition and entity extraction, integrating with messaging platforms, testing, error handling, deployment, and continuous improvement. I effectively managed the project, collaborated, and documented the development process. The result was a functional and user-friendly chatbot ready to engage with its target audience.

Objectives of the project: To create a chatbot using Rasa and Botman.

Tool used: PHP , MySQL , Rasa , Laravel , Botman, Python

Details of Papers/patents:https://www.researchgate.net/publication/341730184_An_Overview_of_Chatbot_Technology

Brief description of the working environment: During the PS-I, the working environment was collaborative, and the company had high expectations for interns to contribute actively. Learning opportunities included working on real projects, acquiring new skills, and collaborating with experienced professionals. The internship focused on personal and professional development, enhancing technical skills, communication, and teamwork.

Academic courses relevant to the project: CSF111

Learning Outcome: I gained hands-on experience in building conversational AI applications using Rasa and BotMan frameworks.I learned how to design and implement

dialogue flows, handle user intents, and create dynamic responses. I gained insights into training dialogue models, utilizing reinforcement learning, and continuously improving the chatbot's performance.

PS-I Project Title: SaaS Management Solutions Comparative Analysis and Market Insights

Short Summary of work done: During my practice school, I undertook a comprehensive project that encompassed two main tasks. The first task involved reading, analyzing, and summarizing whitepapers and blogs from Zluri, a SaaS management company. This allowed me to gain a deep understanding of the SaaS management domain, its challenges, and best practices. Through the thorough examination of Zluri's content, I honed my research and analytical skills, efficiently extracting key insights and information. The second task centered around conducting a competitor analysis for Saasden, with a focus on three major competitors: Zluri, Torii, and Spendflo. Employing various research methodologies, I diligently collected data on each competitor's strengths, weaknesses, market positioning, and unique selling points and did the SWOT analysis along with key methods of comparison for each of the competitors. This analysis proved instrumental in providing valuable market insights, empowering Saasden to identify potential business opportunities and areas of improvement in the highly competitive SaaS management industry.

Objectives of the project: The major objectives of PS would be exposure to the SaaS Management industry first gathering all the market insights and doing research and summarizing it. Also doing data analysis and interpretation of different companies which are the competitors of the company Saasden.

Tool used: Tools used are: Powerpoint presentation, canva, word, google sheets, google docs

Details of Papers/patents: White Paper of zluri were used:

1. The State of SaaS Management Report 2021
2. Remote Workforce Offboarding: Security Threats Report 2021
3. Mapping the need for SaaS Governance
4. Outsourcing IT During the Pandemic
5. ERP Usage and Challenges
6. Remote

Brief description of the working environment: The work environment was good. Freedom was given to us for deciding our everyday's tasks and to complete it enough amount of time was also provided so there is no load on the interns. Timely completion of tasks, attention to detail, and adherence to project deadlines were crucial expectations. The exposure to various tools and methodologies in the company's work processes enhanced my technical skills. Additionally, working alongside experienced professionals allowed me to understand industry best practices, improve teamwork and communication skills, and gain insights into the challenges and rewards of working in a professional setting.

Academic courses relevant to the project: NA

Learning Outcome: Learn about Saas Management, conducting market research and data analysis, creating presentations, Learn and analyse white papers, skill development by use of different S/w used

PS-I Project Title: SaaS Management Solutions Comparative Analysis and Market Insights

Short Summary of work done: The initial assignment involved delving into whitepapers and blogs from Zluri, a SaaS management company. This task served as an excellent opportunity to immerse myself in the SaaS management domain, understanding its intricacies, challenges and best practices. Analyzing Zluri's content honed my research and analytical skills, enabling me to efficiently extract vital insights and information. The

subsequent task revolved around performing a thorough competitor analysis for Saasden, focusing on three major competitors: Zluri, Tori, and Spendflo. Employing diverse research methodologies, I diligently gathered data on each competitor's strengths, weaknesses, market positioning, and unique selling points. Conducting SWOT analysis and employing various comparison methods provided valuable market insights, empowering Saasden to identify potential business opportunities and areas for improvement in this highly competitive landscape.

Objectives of the project: The major objectives of PS would be exposure to the SaaS Management industry first gathering all the market insights and doing research and summarizing it. Also doing data analysis and interpretation of different companies which are the competitors of the company Saasden.

Tool used: Powerpoint presentation, Canva, Microsoft Word, Microsoft Excel, Google Docs and Sheets.

Details of Papers/patents:NA

Brief description of the working environment: The work environment received positive feedback as it granted us the freedom to decide our daily tasks and provided sufficient time to complete them, ensuring interns were not burdened. Meeting deadlines, paying attention to details and adhering to project timelines were deemed essential.
The company's work processes exposed us to a variety of tools and methodologies, which significantly bolstered our technical skills. Moreover, collaborating with experienced professionals proved valuable in learning industry best practices, refining teamwork and communication skills, and gaining valuable insights into the opportunities and challenges of a professional work setting.

Academic courses relevant to the project: NA

Learning Outcome: Having studied SaaS Management Tools, I proceeded with market research and conducted data analysis. I also delved into learning and analyzing various white papers on the subject. Throughout this process, I focused on skill development, honing my expertise in different software used in the field.

Student Write-up:

PS-I Project Title: Super Premium Cookie Category data analysis

Short Summary of work done: The project I worked on during my internship at Unibic Foods, involved comprehensive analysis of competitors in the super-premium cookies market and figuring out insights that can help Unibic to enter this market. The above project has several potential applications - Market Entry Strategy: The analysis and insights gathered from studying the competitors' pack sizes, pricing, sales channels, reviews and ratings, packing types, sales geography, and unique product offerings can provide Unibic Foods with a solid understanding of the current market dynamics. Product Development and Differentiation: By examining the unique characteristics and offerings of the competitor brands, Unibic Foods can identify opportunities to innovate and differentiate its own products. Competitor Benchmarking: By benchmarking its performance against key competitors, Unibic can assess its strengths and weaknesses in comparison to other established players.

Objectives of the project: Unibic is planning to enter into super premium cookie category. Unibic will start with online business(D2C, Marketplace & Q-commerce). Need to analyse data points basis below metrics and come up with suggestions on each metrics. 1. Identify Competitors (Brands) 2. Ideal pack size (Grammage) 3. Pricing (Each cookie) 4. Variants (Flavours) e.g., Chocochip etc. 5. Sales channel (D2C or Market place etc) 6. Review & Ratings. 7. Packing Type (Carton/Tins etc)

Tool used: None

Details of Papers/patents: None

Brief description of the working environment: Throughout my internship at Unibic Foods, the experience has been both enriching and exciting. From the very beginning, I was welcomed with warmth and enthusiasm, making me feel like a valued member of the team.

As the weeks progressed, I delved into the challenging project of analyzing competitors in the super-premium cookies market. Collaborating with a dynamic team of interns allowed me to share ideas, learn from one another, and collectively tackle complex research task. The guidance and support from our mentor, Anshuman Sir, played a pivotal role in steering us towards success. Moreover, the responsibility and autonomy granted to us boosted my confidence and sense of ownership throughout the internship.

Academic courses relevant to the project: None

Learning Outcome: Improved our analytical ,presentation skills and gave us our first corporate marketing experience

Student Write-up:

PS-I Project Title: "Competitive Analysis of Super-Premium Cookies Market for Unibic Foods: Informing Strategic Entry and Positioning"

Short Summary of work done: During my PS-I internship at Unibic Foods, I completed a project to analyze competitors in the super-premium cookies market. Guided by Anshuman Sir, the Ecommerce division head, our team thoroughly researched key metrics like pack sizes, pricing, sales channels, reviews, ratings, and unique product offerings. Using a color-coded system, we gained valuable insights into the competitive landscape, identifying strengths, weaknesses, opportunities, and threats. Throughout the internship, we refined our analysis, incorporating feedback to enhance our research. Introducing price per kilogram as a new metric and exploring additional sales channels further enriched our findings. In the final stages, we prepared a comprehensive seminar presentation, showcasing our research, insights, and strategic recommendations. The positive feedback we received boosted our confidence and reaffirmed the value of our efforts. The internship provided a platform for significant learning and skill development. I honed my research and analytical abilities, navigated complex market dynamics, and improved my presentation and communication skills. The experience also emphasized the importance of data-driven decision-making and adaptability in a dynamic business

environment. Overall, the PS-I internship at Unibic Foods was a valuable and enriching experience, providing me with practical skills, industry exposure, and a deeper understanding of market analysis and strategy. I am grateful for the opportunity to contribute to Unibic Foods' growth and look forward to applying the knowledge gained in future endeavors.

Objectives of the project: The objective of the project was to analyze competitors in the super-premium cookies market and provide strategic recommendations for Unibic Foods' entry into the segment.

Tool used: MS Excel, MS Powerpoint, MS Word

Details of Papers/patents: Nil

Brief description of the working environment:
During my PS-I internship at Unibic Foods, the working environment was dynamic and professional, fostering a collaborative and supportive atmosphere. The company's culture encouraged open communication and provided ample opportunities for learning and growth. As an intern, I was warmly welcomed into the team and given the necessary resources to excel in my assigned project.
Unibic Foods had high expectations from its interns, emphasizing professionalism, proactive communication, and a strong willingness to learn. The company encouraged us to take ownership of our work and to be proactive in seeking guidance when needed. Regular meetings with mentors and supervisors allowed us to receive valuable feedback and align our efforts with the company's objectives.
Throughout the internship, I experienced significant learning and skill development. I honed my research and analytical abilities by conducting in-depth market analyses and synthesizing data. Interacting with cross-functional teams enhanced my teamwork and communication skills, while the challenging project allowed me to apply theoretical knowledge to real-world scenarios.
Moreover, the internship provided me with insights into the industry's competitive dynamics, consumer behavior, and market trends. I learned the significance of data-driven decision-making and how it drives business strategy. Furthermore, the experience reinforced the importance of adaptability and the ability to embrace feedback for continuous improvement.
Overall, my PS-I internship at Unibic Foods was a valuable learning experience that provided me with practical skills, industry exposure, and the confidence to tackle future challenges in the professional world. The supportive working environment and high expectations from the company motivated me to deliver my best and make meaningful contributions to the team and the organization.

Academic courses relevant to the project: Principles of Management ; Marketing Research

Learning Outcome: The major learning outcomes from the PS-I internship at Unibic Foods, focusing on analyzing competitors in the super-premium cookies market, are as follows:
Market Analysis Skills: Through extensive research and data analysis, I developed strong market analysis skills, including the ability to gather relevant data, interpret market trends, and identify key competitors and their strategies.
Strategic Thinking: The project emphasized strategic thinking to identify market opportunities and challenges, formulate actionable recommendations, and assist Unibic Foods in making informed decisions for its entry into the super-premium cookies market.
Presentation and Communication: Preparing and delivering the seminar presentation honed my presentation and communication skills, enabling me to articulate complex concepts and findings in a clear and concise manner.
Data-Driven Decision-Making: I learned the significance of data-driven decision-making, leveraging data and metrics to make informed choices and shape effective strategies.
Adaptability and Flexibility: The dynamic nature of the project required adaptability and flexibility, as adjustments and improvements were made throughout the internship to enhance the analysis.
Problem-Solving: Analyzing competitors and formulating recommendations challenged my problem-solving skills, allowing me to tackle complex issues and devise innovative solutions.
Overall, the PS-I internship at Unibic Foods enriched my skill set, expanded my knowledge in the industry, and prepared me to take on future challenges with a well-rounded perspective and a focus on strategic decision-making.

Unibic LinkedIn (https://www.linkedin.com/

Brief description of the working environment: The project I worked on at Unibic was to gain experience in data analysis. I learned how to collect, clean, and analyze data. I also learned how to use data analysis to make better decisions. My work as a data analyst was to identify trends in the salty snack market in India. Throughout my internship, I participated in practical exercises and projects. This allowed me to apply knowledge to real-world scenarios like using data analysis to track salty snack sales in different regions of India. This information helped me understand the market and make recommendations for Unibic on how to enter the salty snack market in India.
My journey as a data analyst at Unibic was great. I learned various skills, gained practical industry experience, and made valuable connections. As a whole, this project gave me an edge in Data Analysis and Interpretation, as well as Database Management. I am confident that these experiences will help me succeed in my future career.

Academic courses relevant to the project: C Programing, Python

Learning Outcome: The project I worked on at Unibic was to gain experience in data analysis. I learned how to collect, clean, and analyze data using python. I also learned how to use data analysis to make better decisions.

PS-I station: Urjanet - Subscription Management , Chennai

Student

Name: NIKHIL GAJARE . (2021A4PS2466H)

Student Write-up:

PS-I Project Title: Subscription Management

Short Summary of work done: We are a part of the subscription management team where we analyse the various attributes of the customer invoices in order to predict the invoice availability dates in the future.

Objectives of the project: To gain on insight on how companies predict invoice availability in advance and benifit from it.

Tool used: Organization's websites and databases, G-suite applications— Gmail, Gmeet, calendar, SLACK, Notion, Google sheets, docs and presentations

Details of Papers/patents:none

Brief description of the working environment: To make these customer reports, we used multiple applications such as Google docs, slides and sheets, notepads, calendars and basic arithmetic principles to derive the relations between the various dates in the invoices of the customer, helping us in predicting the next billing cycles in order to predict invoice availability in the future.
These customer reports were expressed by tabulating the invoice information, after which we observed certain patterns and trends, helping us in understanding and predicting the consequent dates. We then reported our findings and gave our insights on the same.

Academic courses relevant to the project: Maths-3

Learning Outcome: Predictive analysis

Student Write-up:

PS-I Project Title: Marketing

Short Summary of work done: Wakao Foods was a Finance and Management company. The best part about it was that it was a startup. The founder on the first day told us that since this is a startup, we would have to work in every department and not restrict ourselves. We even got to make our own decision which was great as we were just new interns here. My 2 months here turned out to be amazing as I was already interested in the work that was given to me and I had some experience in it. In my department, I edited every video that we produced for our marketing. I shot over 20 reels for the Instagram page. Additionally, I ideated, shot and edited all YouTube videos that were uploaded on Wakao's YouTube channel. I also worked in other departments like sales where I had to physically visit restaurants and pitch products to them. It was a fun experience overall.

Objectives of the project: To improve the social media marketing and increase brand awareness.

Tool used: None

Details of Papers/patents: None

Brief description of the working environment: Working environment was amazing. I was able to communicate directly with the founder and share my views and opinions. As an intern, the office never made me feel like I was a junior to them. Overall, the culture was amazing.

Academic courses relevant to the project: None

Learning Outcome: I learned how important social media is to build a brand. Additionally, I learned how to use Instagram from a business perspective.

Student Write-up:

PS-I Project Title: Implementing various trading strategy using different indicators as market signals

Short Summary of work done: Initially we were supposed to implement a moving average crossover monthly rebalancing strategy using backtrader library in python. And then we were supposed to implement another strategy similarly which used weekly COT reports as market signals to take relevant market positions.

Objectives of the project: To use COT reports to implement a weekly rebalancing trading strategy on our portfolio

Tool used: Python, Backtrader, CVXOPT

Details of Papers/patents:nil

Brief description of the working environment: We were expected to work in a coordinated manner with our team and be timely with our deadlines. We received adequate help from our industry mentors with periodic inputs about our work, putting us in the right direction.

Academic courses relevant to the project: nil

Learning Outcome: Understanding the working of stock market, and how to use different indicators and their essence.

PS-I station: William O Neil , Bengaluru

Student

Name: BHANDARI SOURABH RAHUL . (2021A7PS2412P)

Student Write-up:

PS-I Project Title: Machine Learning-Based Strategy using FRED Economic Indicators

Short Summary of work done: Achieved 85% accurate recession prediction using Random Forest classifier, based on FRED economic indicators, used this model to develop a successful trading strategy, and further optimized it using Mean-Variance Optimization Applied Deep Reinforcement Learning based algorithm Advantage Actor Critic (A2C) for developing an intelligent stock trading agent, which uses FRED economic indicators to make decisions, trained the agent on a self made trading environment, achieving a CAGR value of 31.5%

Objectives of the project: William O' Neil India specializes in stock market data research, implementing algorithmic trading strategies, and performing quantitative analysis

Tool used: Skills learnt- Python (Backtrader, Quantstats, Gym, Pytorch, Pandas), Data Analysis (Correlation, Covariance), Finance

Details of Papers/patents:NA

Brief description of the working environment: It was a very good learning project. We were assigned a research problem and made to work in teams of two. Liked the work a lot. The work culture at the company was pretty cool. Will definitely recommend the PS site to the juniors

Academic courses relevant to the project: Principles of Economics, Ecotrix, Computer Programming

Learning Outcome: An excellent start for Quantitative Research

---

PS-I station: William O Neil , Bengaluru

Student

Name: NISHIL ASHUTOSH KULKARNI (2021AAPS2499G)

Student Write-up:

PS-I Project Title: Backtesting Trading Strategy designed on COT Reports

Short Summary of work done: Researched what data COT reports provide, and how this can be used to generate a trading signal. Used python package backtrader to code the strategy. Worked on optimizing the strategy by tuning various parameters. Implemented portfolio allocation among different asset classes using Mean Variance Optimisation, coded in Python using library cvxopt. Generated detailed reports of the strategy execution to serve as a guide for investors.

Objectives of the project: Design, code, optimize and backtest a trading strategy based on Commitment Of Traders (COT) reports published by the USFTC every week. The portfolio must be composed of multiple asset classes, must generate high returns to investors, and be practically executable.

Tool used: Jupyter Notebooks, VSCode

Details of Papers/patents: None

Brief description of the working environment: This PS was online. Company expects us to research a lot on the given work, adhere to the timelines and ask relevant questions. New ways of approaching any financial situation is appreciated. Company also expects us to be thoroughly versed with all the nuances of the strategy that is designed. I improved on my data processing, algorithm design and visualisation skills. Apart from this, I improved on my communication and presentation skills. I also learnt how work division is to be done on any project.

Academic courses relevant to the project: CP, OOP, SAPM

Learning Outcome: Python, Data wrangling, Portfolio Theory, Derivatives trading

---

PS-I station: William O Neil , Bengaluru

Student

Name: JAIDITYA SINGH . (2021B3A71147P)

Student Write-up:

PS-I Project Title: Algorithm Trading and Trading Strategies

Short Summary of work done: Created two trading strategies in python using the backtrader library primarily. First one used the concept of moving average crossover in order to buy or sell and used Mean Variance Optimization for weight allocation. The second project used COT reports to generate signals for buying and shorting. We used MVO and Inverse Volatility for weight allocation.

Objectives of the project: Two Projects were given. First project focused on creating a Moving Average Cross over strategy. Creating and back testing it. The second was to develop a trading strategy using COT reports for signal generation.

Tool used: Python majorly

Details of Papers/patents:none

Brief description of the working environment: Gives a good insight into the world of Quantitative Trading and what is it all about. Helps in learning the use of various financial concepts in the real world. Makes you more knowledgeable about the security exchange market as a whole.

Academic courses relevant to the project: Derivative and Risk Management

Learning Outcome: 1) Use of various financial instruments.
2) Portfolio management
3) Risk reduction and mitigation
4) Pandas, Numpy, Backtrader, cvxopt libraries in python.
5) Usage and cleaning of large amounts of data.

PS-I station: William O Neil , Bengaluru

Student

Name: TANMAY AGARWAL . (2021B3A73040H)

Student Write-up:

PS-I Project Title: Portfolio Optimization Strategy

Short Summary of work done: We devised a signal generation strategy centered around yield curve inversion. To construct our portfolio, we incorporated data from key benchmark indices like S&P 500, NASDAQ 100, and NASDAQ Composite Index. The strategy involved monitoring the 10Y-2Y yield spread data, which acted as an indicator of an impending recession, prompting us to take short positions based on different Moving Averages. Additionally, we conducted a monthly rebalance of assets using Mean Variance Optimization. To implement these methods, we utilized Backtrader and CVXopt libraries, along with Pandas and Numpy.

Objectives of the project: Backtesting moving average crossover for stock selection & fixed income assets with yield curve inversion as signal source

Tool used: None

Details of Papers/patents: None

Brief description of the working environment: The working environment was positive, offering a conducive space for learning. Despite the remote setup, the company provided comprehensive help and support, making me feel included and valued. Regular video call meetings, occurring 2-3 times per week, fostered a comfortable atmosphere and allowed for productive discussions.
Initially, I had expected exposure to various company departments. However, the internship primarily focused on working closely with my assigned mentor. While this limited my scope, it provided an opportunity to delve deeply into my area of interest and develop a strong mentor-mentee relationship.
Under my mentor's guidance, I engaged in various tasks and projects, expanding my knowledge and honing practical skills. These real-world challenges encouraged critical and creative thinking, preparing me for future endeavors.
Despite the limitations, the internship provided a valuable learning experience, and I appreciate the supportive working environment and the opportunity to collaborate with dedicated professionals. I look forward to applying the knowledge and skills acquired during this internship in my future pursuits, and I am eager to contribute to a company that values and nurtures its interns as essential team members.

Academic courses relevant to the project: Computer Programming (CS F111)
Fundamentals of Finance and Accounts (ECON F212)
Derivatives and Risk Management (ECON F354)

Learning Outcome: The objective of our project was to work with Backtrader library of Python and use Yield Spread Data as well as various other indicators, to be able to predict the incoming financial recession in order to protect our portfolio from potentially large drawdowns. This helped us learn more about financial strategies, and acquainted us with the process of fine tuning parameters for best financial returns on our portfolio.
